A Manual of Online Molecular Biology Techniques

by:

Professor Ed Rybicki
Dept Molecular & Cell Biology
University of Cape Town

copyright 2005

Contents:

- Sodium Dodecyl Sulphate Polyacrylamide Gel Electrophoresis (SDS-PAGE)
- "Western" or Immunoelectroblotting of Proteins
- "Lunchbox" Immunoabsorption Techniques
- Affinity Purified Monospecific Antibodies to Gel-Purified Proteins
- Polymerase Chain Reaction
  - PCR Primer Design and Reaction Optimisation
  - Standard PCR Protocol
  - Reverse Transcription PCR
  - Core Sample PCR (for bands in gels)
  - Calculating Concentrations for PCR Reactions
Detection of Nucleic Acids by Hybridisation
