Introduction

Object of this thesis has been to underline a small facet of the influence of the Missionaries on the Coloured people at the Cape in the nineteenth century; to describe the impact of Christianity on Single social unit, which was a fusion of primitive Hottentot and slave elements, subject to strung Euro-cean (white) pressure, both economic and otherwise.

What was intended as a modest exploitation of the information available has resulted in a perhaps too lengthy treatise. But it is felt that the period of a century covered, warrants as full a discussion as possible.

It is hoped that this thesis has succeeded not merely in telling the story of the mission at Genadendal, but has emphasised the significant interplay of religious, economic and social contacts, ideas and problems in the development of Coloured society at the station. For Genadendal is an example of the growth of a Christian Mission in a colony of settlement.

The sources on which the thesis is based are in the main the periodical publications of the Unitas Fratrum. The English accounts are valuable for letters and contemporary articles by the missionaries, while those in the German language contain an almost complete set of annual reports from the Brethren on the stations. The valuable diaries, extant on the majority of the Moravian mission stations all over the world, as well as the correspondence at Genadendal had to be ignored for the purpose of this thesis because of their length. His material, kept at Genadendal, is invaluable for the history of the missions in South Africa. It should be housed in a place where it will not be lost to posterity.

I am sincerely indebted to Rev. L.A. Schmidt, Rev. P.4. Schaberg, Mr. and Mrs. E. Weder and Berw. D. Wessels whose encouragement and assistance were invaluable to me in finding and selecting the material on which the thesis is based.

The Origins and Thought of the Unitas Fratrum.

The Church that was to send the first protestant missionary, Georg Schmidt, to South Africa, was the Church of the United Brethren.\(^1\) This Church had its origins in the work of the great reformer Johann Huss. In 1451 a number of Brethren and Sinters formed the 'Unitas Prat Z0' at Künwald in Bohemia. It had a membership of 200,000 in \(^{31}\) but it was broken up during the Thirty Years War.\(^2\)

The remnants of this Church,\(^3\) and other German pietistic elements settled on the lands of Count Zinzendorf, at herrnhut in Saxony. More, on the 13th. August, 1727, they founded the renewed Church of the United Brethren. This community was imbued with the missionary spirit. The Moravian refugees, who had left their country because of their religious convictions, were in particular the carriers of this spirit. Count Zinzendorf, their patron, shared their fervour. with his sincere and pious belief in the Saviour, his zeal for the work of God, his community spirit and his talent for organisation, Zeinzendorf was precisely the man to foster the potential powers of the herrnhüters.\(^4\) Zinzen­dorf's aim in his own. words was: "Die Bekehrung der Heiden, and zwar nur solcher, an die sich sonst niemand machen wür­de."\(^5\) On the 21st August, 1'52, the first two missionaries were sent out from herrnhut to the Danish colony of St. Thomas in the West indies.\(^6\)

To understand the spirit of these missionaries, one must be familiar with the spiritual atmosphere at herrnhut. The community at herrnhut was a product of Pietism,\(^7\) and contained a number of different elements.

"On the one hand, it consisted of the Lutheran inwardness of Count Zinzendorf, a man of great personal charm and attractiveness, ....his aim was to unite the true lovers of Christ in small groups,

6) ibid., p. 5.
rather after the earlier ideal of '.Luther and
Spener's system of 'conventicies'. he never dreamed
of the impossibility of uniting these supra-eccle-
siastical groups with Lutheranism. On the other
hand, the Herrnhut Community contained the secterian
impulse of the Moravian .Brethren, who, having
incidentally settled upon the Count's estate, became
to him a 'chariot and warhorse for gaining the vic-
tory; in the process, however, his conventicle idea
developed into that of a sect, organised on an ex-
clusive basis, founded upon the voluntary principle,
and upon Maturity in Christian experience, exercis-
ing powers of discipline and excommunication - a

body in which lay men exercised a spiritual ministry.'

Two conflicting tendencies fused, and because the
Lutheran Church did not accept the 'conventicle' idea of
the Count, a new Church was born of this fusion.
"...its chief aim was to attain the highest possible
degree of inward piety and Christ-mysticism, by
means of worship, organization, and education."
Troeltsch describes the qualities of the Church of the
United Brethren in the following words:
'The body of the communicants was to be as wide as
possible; and discipline was directed to this end.
The small size of the community, its system of mutual
control, its independence of the State, its legal
character as an 'association' (rein), its Wei-/102S
undertakings which arose in order to secure its
existence, its urgent desire to win souls freely to
Christ through missions to the heathen, above all
the endeavour after an active purity of the

10. against

The ethic of the Moravians originated in the Lutheran tra-
dition by Zinzendorf was tolerant, but through Calvinistic
acceions it was also related to Puritanism.

One of the most important elements in the teaching of
the United Brethren was their mysticism.

"The Count himself was its not outstanding repre-
sentative - indeed, it was Zinzendorf who expressed
this type of piety in a form which was intimate and
spiritual,....Zinzendorf no longer regarded Pietism
as an attempt to reform the church; to him it was
a voluntary association of individuals who are uni-
ted with the Saviour who is spiritually present and
who can be found in the word,.... He transformed
Opener's conventicle ideal into a form of free Chris-
tian social life, through which he and the brethren,
in this community guided by providence, have been

ranted a special relationship with the person of the Saviour. ...this Pictist Christ-Mysticism, and especially that of the Zinzendorf variety, always regarded ells direct experience as an entirely personal and private relation with the living Saviour."

This element in a sense contradicted the sectarian organization forced on Zinzendorf by the Moravian emigrants. 12) The personal piety evident in the writings of Schleiermacher, 'Lovalis' arm even Goethe, was of importance outside the Church. It is manifested in the practice of making and reading reports on the inner life of individuals. In their missionary accounts this trait in their ideology is one of the most noticeable. Their influence on the rest of Protestant Christianity is greater than is generally realized. Their famous book of Biblical 'watchwords' 14 is printed in twenty-six different languages and 300,000 copies are sold annually. The membership of the Church is only 210,926. 15)

In other directions, however, the relation between Moravian mysticism and ecclesiasticism is most obscure. Zinzendorf always considered himself in agreement with Lutheran theology. In reality, however, he only agreed with certain sections of Lutheran doctrine. With the ecclesiastical and social- logical, of Lutheranism he certainly did not agree. 17) Actually there were closer affinities to the Calvinists than to the Lutherans. 18) 'His is one of the reasons why they found favour with the Calvinist colonists at the Cape.

Their sectarian ideals led, them to their belief in the 'dignity of work.' 9)

As the communities had to meet their own expenses and consisted mainly of poor people, this element was strengthened. By these methods they also paid for most of their missionary work.

14) A calendar, in which every day of the year is placed under a Biblical text.
17) ibid., p. 789.
The missionaries, who case out to the cape in 1792 were, therefore, of the artisan class and aimed at creating a self-sufficient community at Genadendal.21) The Moravian communities did not provide all the lands for the missionary work. Throughout the Nineteenth Century this 'small but energetic Church' had many outside sympathisers. Financial aid came from many quarters and societies of friends of the Moravian Missions were formed in a number of European countries and America. In 1817 the London Association in aid of Moravian Missions was formed when contributed substantially to the funds of the mission until the end of the Nineteenth Century.22) Besides, the missionaries at Genadendal report the arrival of aid in kind from sympathisers in England and the Continent.23)

Earl Russel is reported to have said that the constitution of the church was the most skilfully and wisely balanced of any with which he was acquainted.24) It combines both democratic and aristocratic elements. It is ruled by bishops, appointed by the supreme legislative body, or, when that is not in session, by the supreme executive body.25) The legislative body, consisting of the General Synod of the Church, has supreme authority. This body is convoked infrequently. When it is not in session a Directory acts with full powers. A special commission is appointed jointly with the Directory to deal with the affairs of the missionary work. To-day the various national branches of the Church care for certain mission fields, although there is mutual help when necessity arises.26)

The Moravian have always been very careful in the selection of their missionaries. Besides, the number of missionaries in proportion to the total membership of the Church is very large, In 1903 Stewart estimated it to be one missionary for every sixty communicants, whereas other Christian Churches average one missionary for every 3,703

communicants. They never seem to have lacked zealous missionaries prepared to preach the Gospel in the most forbidding regions. The list of applicants is scrutinised by the missionary department; the applicants are free to "accept or decline" the appointment, and they may choose the field they prefer.  

He missionaries of the United Brethren did not receive any special training until well into the second half of the Nineteenth Century. The emphasis was laid on the willingness of the applicants to serve as missionaries. As a result few really learned men went out into the field. Often they did not learn the language of the people they were preaching to.

The infractions given to the missionaries were alas in saner terms and were meant to be corrected and supplement by actual experience in the field. Only in 1636 were more precise instructions worked out with particular reference to the different fields. The missionaries were instructed to do whatever they did "in the name of God". They were not to be held up to the halo congregations as martyrs. They were to work together in a spirit of brotherly love. Special care was to be exercised in the making of converts and in giving them positions of responsibility. The bringing of converts to Europe was in the beginning strongly dissaproved of.

Their attitude towards the heathens was such that they did not try to eradicate all non-Christian customs. They allowed such customs as did not directly interfere with Christian principles to be continued. They were for instance, prepared to baptize a polygamist and allow him to keep more than one wife but they did not allow polygamy among their ordinary converts. Baptized polygamists, however, were debarred from posts of responsibility in the congregation. The baptizing of polyandrists on the other hand was prohibited.

They found by experience that the best method of influencing the minds of the reaction was to preach to them simply on the suffering and death of Christ for the sins of mankind. They found that this approach had far greater

effect than teaching about God. All the heathen seemed to have some notion about God, but they knew nothing of a merciful God and this appealed to them. After 1844 this method of approach of the heathen was followed universally by the Brethren.

Zinzendorf's early airy as the gaining of a few select converts for the Lord and creating a Christian elite among the heathens, this early airy of the Brethren was modified, o. Leg to the fact that They made move converts than expected. he idea that communities on the lines of the original community at herrnhut should also be formed among the heathens was introduced. in 1869 the idea of independant churches developing; out of these communities was formulated by the General Synod.

Artisans and traders have always accompanied the actual missionaries. In the beginning most of the missionaries were artisans ad traders. Although the proportion of learned men co the traders and artisans has increased, the practice of sending, out la, brethren as _raters an artisans has not ceased. At first the line between lay brethren and ministers was not drawn very clearly. he lay brethren cook part in the actual preaching of the Gospel and care of the congregation whilst earning an income for the mission station. e tendency been to draw this distinction more clearly. missionary in the service of the society was allowed to work for private profit or own private property.

the Sister, who went out as the wives of the directly concerned in the mission work. they had thus to be carefully selected as Nell. A single missionary always Lad a wife selected for him by the mission directory at home.

in their relations with the colonial governments the Brethren followed the principle enunciated in the Bible: every soul be subject unto the higher powers. For there is no power but of God: the powers that be are ordained of God. (Romans, 13. v. 1.) They did not attempt to influence the policy of the government directly, but indirectly they hoped twat their influence would ameliorate the native policy of the colonial governments and that government would learn

1) Ad. Schulze, Abriss, p. 60; J. Stewart, p. 89.
3) Ad. Schulze, p. 56.
to appreciate Christianisation.\textsuperscript{35} This quietist attitude was probably a result of the fact that, unlike cue English missionaries, most Moravian originally came from absolutist states of central Europe.\textsuperscript{36}

In their dealings with other denominations Zinzendorf instructed the missionaries to let their converts know as little as possible about the divisions of Christianity and to be impartial when their converts did notice these divisions. In the beginning, governments and other churches showed marked opposition, but as they learned more about the United Brethren this attitude changed. During the nineteenth Century they were on friendly terms with missionaries of other denominations, and colonial governments in many cases favoured them.\textsuperscript{38} With regard to the European colonists a similar development took place, more gradual and less comprehensive.\textsuperscript{9}

were always close contacts between the missionaries and the congregations at home. Frequent visitations of the mission fields by important men of the General Synod were undertaken. Regular reports the missionaries sent home and their aide circulation made the congregations aware of the developments in the missionary fields. Books were written about the work in foreign fields and some of Zinzendorf hymns deal with the missionary effort.\textsuperscript{41}

She missionaries of the United Brethren, were interested in the genuine conversion of the individual rather than in mass conversions; they were practical, persevering and zealous. The most important reason for these laudable qualities was their fervent religious conviction:

\ldots they have some secret of religious life \ldots some ideal in their Christianity towards which they work without saying touch about it."

unless the full significance of this factor is realised, it will be difficult to understand the self-denying cork of the Moravians in South Africa.

Ziegenbalg and Böving, two German missionaries on their way to India, tried to arouse European Christendom to the degraded condition of the Hottentots without much success. Eventually two Dutch clerics, van Alphen and de Bruyn, asked Zinzendorf and the Herrnhuters to send a missionary to the Cape.¹

The man selected for this task, Georg Schmidt, was born in 1709, the son of Moravian peasants. Hearing of the United Brethren, he journeyed to Herrnhut. Here he case to be "recognised as a young man of exceptional piety and devotion." ² he was sent to Bohemia where he suffered six years imprisonment for The sake of his religious convictions. Zinzendorf chose him as the first missionary to the Cape.

Immediately after the request for a missionary at the Cape had arrived in Herrnhut, Schmidt proceeded to Holland Where he arrived in arch, 1735. he at once began to learn Dutch. Zinzendorf's friends procured the necessary permission from the council of Seventeen. The Council insisted on a religious examination of the prospective missionary during which Schmidt "made a favourable impression upon the divines."³ When he had satisfied the clerical commission as to his faith and character, the Court of Directors gave their approval, granted him a free passage to the Cape and provided him with an introductory letter to Governor de la Fontaine who was Instructed to "grant him every help and assistance in this good purpose."⁴

On the 9th July, 1735, Schmidt's ship 't Huis te burg arrived in Table Bay. he immediately went to call on the new Governor Kervel. The Secunde, captain RhGenius, a born Berliner,⁵ invited him to stay at his home.⁶ The inhabitants of Cape Town were not over optimistic as to his

---

⁵) ibid., Chapter vii.
success in converting the Hottentots.  

Le Council of Policy likewise doubted that he would be successful. His arrival is recorded in he minutes of this body in the following way:

"And... by the vessel 't Luis te Rensburg" there has come to land here a certain person named Georg Schmidt, with the purpose - if that be possible - of converting the Hottentots from Heathendom to Christianity, all possible assistance shall be rendered to the aforesaid person for the prosecution of that pious work and the attainment of its good object."

Schmidt was detained in Cape Town for a considerable period. During this time he made the acquaintance of the clerics in Cape Town and of the sincere Christians. The Dutch pastors, Le Sueur and Kok, raised objection to his performing the sacrament of baptism, but whether they informed him that pastors of the Dutch eformed Church had the sole right to baptise is hard to say.

In the beginning of September, as opportunity for his journey into the interior presented itself. Rampen, a corporal in charge of the Company's post at Zoetenelksvallei, was returning to duty. The Governor supplied Schmidt with provisions and instructed am en to give him every assistance. Two Hottentots, Africo and Kibbodo (Kibido) travelled with them. The party arrived at the Company's post, on the 13th September, 1737. Schmidt first settled at hartebeestkraal near the Company's post at Zoetenelkvallei. He immediately began building a house. Some of the soldiers and the Hottentots helped him; the latter realised that he had not come to take away their cattle or their land. The house was soon completed, but Schmidt was to stay in it for only seven months. A number of Hottentots lived near the house, among them Africo.

Schmidt soon started the work of preaching the Gospel.
to them. He also attempted to teach them agriculture so as to make them live a settled life which would favour his work. His description of the Hottentots is not very favourable.

'The Hottentots are of a phlegmatic disposition, and sleep much in the daytime. In a moonlight night they amuse themselves with dancing, caper-cutting, and singing, and at the same time watch over their flocks. (These flocks were often attacked by lions and leopards.) Their clothing consists chiefly of two sheep-skins sewed together and cut into the shape. These are kept greased and tied around their waist; but the common story of their wearing cheeps entrails round their arms and bodies is without foundation. Indeed the women often wear thongs cut of bull's hide round their legs, but never entrails. Their riches consist in oxen, cows and sheep and their chief food is milk and boiled meat. Instead of bread they eat wild roots, which they also now and then boil. They neither plant sow nor cultivate the ground. To move with their cattle from place to place, whenever they can find the greatest quantity of provender. There they set up five or six tents under the control of a captain. They have neither divine worship or any ceremonies, and seem to believe nothing but that there is a great Lord of all, whom they call Iuileha, and a devil called Gabala, of whom however, they do not appear afraid."

that the Hottentots near the post still lived in a state and that they still dated cattle and sheep. The method of teaching the primitive people the Gospel mould not have found the approval of modern missionaries, but the Hottentots listened to him perhaps because this was the first European who wane to help them. He visited them at their fires, distributed tobacco among them and talked to them. Later he tried to learn their language. This he found impossible on account of the numerous clicks. He therefore decided to teach them Dutch so that they could understand well. In October, 1737 he started a school for Leis purpose. He prayed with his pupils before and after the lesson and on Sundays he read them the Bible and spoke to them of the Saviour."

he proximity of the Company's post soon proved to be a drawback on account of the soldiery posted there. In February, 1738 he was 'given to understand' that he was too near the post."

15) Schmidt en sy Opvolgers, p. 8.
God wanted him to to leave and showed him where to go. lie moved to the opening of the Baviaanskloof where Genadendal now stand. Eighteen Hottentots, who had taken a deeper interest in his teaching, accompanied him. The acting Governor Swellensrebel, approved of this and allowed Schmidt the use of the land. Schmidt's friend and patron, Rhenius, instructed the corporal to assist him again in building. 

A beginning was made in what Schmidt called a 'desert place', on the 3rd April, 1753. Soon the missionary resumed his activities, apparently without much success. Willem, one of the Hottentots, alone was genuinely affected and pleaded with his people in the Hottentots language. Besides Willem, Kibbodo and Africo, seemed to be more interested than the rest. He Sunday services were attended by between 35-50 natives.

In November, 1740, Scheidt wrote to Herrnhut about his success and his problems. The people who come to the meetings morning and evening tended their cattle and worked during the day. The school he had established did not last long as "these people do not love perseverance," and the task of teaching them "Low Dutch" was well neigh impossible. Yet he taught them to say a prayer before the meetings. His congregation consisted of 10 men, 10 women, 7 boys, and 5 girls, who were divided into classes. Fifteen could read the New Testament. He reminded the Brethren that he was alone and urgently needed an assistant. He had to contend with three major problems. First, there was the language barrier. Secondly there was the fact that the Hottentots including members of his congregation were prone to drunkenness. Even Africo and Kibbodo fell victims to this vice.

Thirdly, the Hottentots were still nomads and trekked around with their cattle. Once, when his wards had let their cattle stray onto the sown lands and had, not remedied the master when asked to do so, he discontinued conducting services and the school as a punishment.

The attitude of the colonists towards Schmidt's work is...
difficult to ascertain. probably most colonists were indifferent towards this remarkable man. His work did not affect their labour supply as that of later missionaries did. live dutch people visited him in November, 1738 and gave a favourable account of him in Cape Town. Georg Schmidt did not confine his work to the Lottentots, but also preached the Gospel to the colonists. Besides Kampen he also converted the worthy corporal’s successor, Martinsen, and maintained contact with religious people at cape Town.

In 1738 Kulenkamp’s famous pastoral Letter arrived which branded the Herrnhutters and Zinzendorfi as heretics. It had a detrimental effect on all the missions of the United Brethren in Dutch colonies. Zinzendorf immediately replied.

Nitschmann and tiler, two missionaries of the United Brethren on their way to ceylon in 1739 carried a letter containing the count’s refutation of Kulenkamps charges. Pa it was signed by the members of the Glasgis of Amsterdam, it eased Schmidt’s position for some time. Schmidt had fairly close contact with the community in Herrnhut. Zinzendorf wrote to him reminding him of the importance the Brethren attached to the death of Christ.

The visits of Nitschmann and Eller, who were at the Cape on their voyage to and from Ceylon strengthened the lone worker in his purpose. The community at Herrnhut twice unsuccessfully attempted to send him an assistant. Zinzendorf then sent him a regular letter of ordination empowering him to baptize. Schmidt as overjoyed when he collected the letter at Cape Town in March, 1742. Ultimately this new power confirmed upon him was to prove his undoing.

The return journey to Baviaanskloof, Schmidt baptized Willem in a rivulet, "in the name of the Son who has died for us and in the Name of the Father and in the Name of the Holy Ghost." He gave Willem tole name of Joshua. Later at Baviaanskloof he baptized four other members of his congregation whom he considered worthy of this important step.
Later they slipped back into their old ways and absented themselves from the meetings.

At Cape Town the baptism astonished the populace and aroused the Dutch Reformed clergy. The ministers in Cape Town sent for Joshua and Christian (Afriko) and examined them. They were surprised at their knowledge and sent them back exhorting them to remain in obedience to their teacher and what he had taught. They also summoned Giorg Schmidt himself to the Cape and he was interrogated by the clergyman and the Council of Ranie'. He remained firm about his right to baptize. The Council warned him that he could no longer baptize until the authorities in Holland had given a decision.

Three Dutch ministers at the Cape assembled in Cape Town and wrote to the classis of Amsterdam, to which the Dutch Reformed Church at the Cape was affiliated. They formed the Classis that Governor Swellengrebel had prohibited Schmidt from carrying out any further baptisms. They maintained that Georg Schmidt was not entitled to teach as he did not conform to the rules of the National Christian synod, nor had he been examined by this body. They pointed out that he taught the faith of the Herrnhut sect. His authority to baptize had been conferred illegally by a written Bull or Act of Count Zinzerulor and not by the Classis. Hottentots had been baptized irregularly, not before a full congregation. The baptized Hottentots were not fully versed in the principles of Christianity and, as Schmidt had not been ordained by the laying on of hands, they could not partake of the Holy Communion immediately after their baptism as required by the Dutch Reformed Church. They requested the Classis to send out Krankenbezoekers or schoolmeesters to look after the interests of the Hottentots in place of Schmidt.

The answer of the Classis intimated that the Synods of North and South Holland had pronounced the baptisms of the Herrnhutters out of order. They promised to send out suitable men "to instruct the unfortunate Hottentots and others.

3) Schmidt en sy Opvolgers, p. 15-16.
beyond the mountain (Over Berg”) In the middle of the Eighteenth Century the principle of cuius regio, illius religio was as yet too strong for the Classis to allow a missionary of a denomination not their own to preach at the Gape. besides, the Company feared that a non-reformed church in the Colony would cause dissen-

sion.

without waiting for the answer of the Classis, Schmidt informed the Brethren that his position at the Cane was untenable and the best course of action would be for him to return to procure more favourable conditions from the authorities in Holland. In August, 1743, he received letters from Herrnhut advising him to return. Entrusting his gar-
den to Christian, Schmidt took leave of his small congrega-
tion on the 30th October, 1743.

he was granted a free passage to Holland by the Coun-
cil of Policy. Swellengrebel, Rhenius and others gave him testimonials of good conduct. he Governor promised to pro-
tect the Hottentot community at Baviaanskloof. Schmidt left Table Bay on the 4th October, 1744 and arrived in Texel three months later.

The congregation left at Baviaanskloof consisted of
eleven married couples, eight single men, nine beys and eight girls. his small community of forty-seven Hottentots apparently held together for the first few years. Schmidt’s and Zinzendorf’s subsequent efforts to obtain the permission of the Council of Seventeen for Schmidt’s return were unavailing for two reasons: the denominational jealousies and deference to ‘public opinion’ in the Colony. 

Martin Schwabler, a former servant of the Com-
pany at the Cape, decided to continue the work. he was one of Georg Schmidt’s European converts. Schwabler left in 1748, ostensibly to seek re-appointment with the Company, but in reality to proceed to Baviaanskloof. he reported that the community at Baviaanskloof longed for their old teacher. Schwabler did not leave any traces

on the life of the community* tie died during an epidemic in 1756. This was reported by Wynstrauch, another of Schmidt's converts. He also reported that the congregation held together till Joshua (Willem) and Christian (Africo) died in 1755 or 1756, but in 1758 Baviaanekloof was deserted. In 1760 some Indian missionaries of the United Brethren were assured in Cape Town that the Hotetentots had not forgotten Schmidt and that some of the baptized were still alive. Schmidt, back in Germany married and continued in the service of the Church of the United Brethren, he died on the 1st, August, 1785, in the hour that he had, set aside to pray. United Brethren did not forget its South African station. In 1789, the Synod of the United Brethren decided to renew its work at the Cape. The attitude in Holland towards the Unitas ratrum had changed, with the diffusion of their ideas. A congregation of the United brethren was established at Zeist, and he authorities began to appreciate the value of their work in the colonies. At the Cape the attitude towards the missionaries, especially among the clergy had undergone a change as well. Two young reformed ministers, an tier and Vos, brought the 'missionary spirit' out to the Cape with them and conducted services for the Hottentots. Thus when Bishop Michel xxx visited the Cape on his return from India, he realised that the tide had turned. After the Lutherans had received permission to form their own congregation it would have been illogical for the Company and the clergy further to resist the establishment of a 'Lutheran' mission.

In 1789, the United Brethren petitioned the Company to permit them to send, three Brethren to the Cape. They were to be permitted to choose a suitable location in the interior under the protection of the Company where they would be able to administer the sacraments, preach the Gospel and form a congregation. They farther petitioned that they should have the power to appoint and dismiss the missionaries. The Brethren wave to sail in a Company's ship at a reasonable price. They promised to avoid everything that would cause resentment among the established churches at the Cape. this pea.

Partition was granted under three conditions. The number and names of the missionaries should be made known to the Company, they were not to settle in a place already occupied by a Christian congregation, and the missionaries should not be dismissed or appointed without the knowledge of the Company. These conditions, fair in themselves, were open to varying interpretations. The second condition was exploited by certain persons in an attempt to drive the missionaries out of the Colony into the interior. It was under these conditions that Karsveld, Schwinn and Kühnel resumed Schmidt's work at the Cape.

The century of missionary work in Genadendal from 1792 to 1892 can be divided into four periods. The first period of initial difficulties and of consolidation, stretches from the first arrival of missionaries to the visitation of Brother C.I. Latrobe in 1816. The second period, one of vigorous expansion and improvement commences with the stimulus given by the visitation of Latrobe and ends with the death of the beloved and energetic organiser, bishop Hans Peter Ballbeck in 1840. The third period is characterised by the increasing opposition of both the inhabitants at Genadendal and the Colonists to missionary work. It extends from 1840 when CL. Teutsch became Superintendent till the 1860ies when Künnel became Superintendent and Berea was founded. The fourth period ushers in developments making for the independence of the Church of the United Brethren in South Africa especially after the division of the mission field into an Eastern and a Western province in 1859. It really only comes to a close in 1922 when the first Church Conference for South Africa West was held. It is a period where the missionaries increasingly realise that the ideal of a Coloured community on the pattern of the Herrnhut community, is no longer practicable because of the early effects of the Industrial Revolution in the Cape.

First Period.
The three first missionaries, Hendrik Marsveld, from Gouda in Holland, Daniel Schwinn from Erbach in the Odenwald and Johann Christian Künnel from Ober-Seiersdorf in the Lausitz all ordained deacons of the Church of the United Brethren. They arrived in Cape Town in November, 1792 and were cordially welcomed by all those sincerely interested in missionary work. They stayed in the home of one of these friends. The government advised them to proceed to the place where Schmidt had worked as there were still Hottentots there. They proceeded with Teuniseen, the commander of the Company's post Zoetemelksvallei, into the interior. On the 24th December, 1792 they reached Baviaanskloof. They found

1) L.R. Schmidt, Die Broederkerk, p. 12.
3) H.G. Schneider, G., p. 40.
ruins of Schmidt's house and some of the fruit trees he had planted. A little further away they found the only remaining baptized convert of Georg Schmidt, Old Lena or Magdalena. After greeting the missionaries with the words: 'hank' be to God." she produced a Dutch New Testament concealed in a leather bag covered with sheepskin, in parch

A new building at Baviaanskloof had been erected by the Hottentots assisted by two coloured neighbours. The missionaries then moved to their new home from Zoetemelksvallei.

They immediately commenced teaching the Hottentots and they had an attendance of twenty-five on the first day. It was not necessary for them to go out and seek dottentots.

In July, 1793 the first baptism took place. At the end of 1794 the congregation consisted of thirty-six baptized persons. The only major setback at this time occurred in 1795 when the missionaries were ordered, by the insurgent leader Pisani to leave Baviaanskloof. They retreated to Cape Town, out soon returned and recommenced their work.

The British government was generous in the permission and help it gave for the building of a chapel at Genadendal. The first temporary chapel was dedicated in March, 1796. In the years 1799-1800 the church, which was in use till 1692 and could over a thousand persons, was erected.

For this, reinforcements had been sent out. Brother and Sister Kohrhammer arrived in May, 1198, and thus the first woman missionary commenced work at Baviaanskloof. Two years later, Schwinn returned from a visit to Germany to, with his wife, Brother and Sister Rose, and the two brides of Marsveld and Rose, who had been a missionary in Labrador, was sent out to cope with the precarious financial situation, which had arisen on account of the many visitors at Baviaanskloof and Schwinn's confused bookkeeping.

When he arrived there were about 130 at the station. Rose was an efficient and vigorous man. His early death in 1805 was a great blow to the mission.

Xle period of Batavian rule brought steady improvement at Baviaanskloof and in 1806, Governor Jaiseens suggested the name Genadendal which has since been the :sane of the first missionary station at Baviaanskloof.

7) ibid., Journal Bklf. 1794.

8) G Schneider, ibid., p. 134-6.

The permanent British administration of the Colony since 1806 was es sympathetic. Caledon suggested a new station at Groenekloof in 1808. Kuester and Schmitt sad just arrived and there were thus enough missionaries to start the work there. After this, there followed a regular flow of missionaries into the country until in 1611 there were six married Brethren at Genadendal alone. Nethammer died in June, 1611 and Kühnel in April, 1613. The measure of the Brethren's work in this period can be gauged from the numbers quoted in the diary for 1612. The congregation then consisted of 676 persons, of whom 296 were communicants, while there were 1073 persons living at Genadendal.

Second Period

Visitaton of Latrobe, the society's secretary in London, in 1816 had a stimulating effect on the mission. It was during his visit that the overseers' or 'opziener's' conference was established and the Rules and regulations formulated which were to play so important a part in the secular administration of Genadendal. It was due to his insight that the able Hans Peter Hellbeck was entrusted with the task of leading the mission in South Africa.

Hellbeck reached Genadendal early in 1818 and immediately commenced labouring, vigorously for the expansion of the mission. Four more stations were founded during his period of office (1818), Him (1824) - to relieve the congestion at Genadendal - Shiloh (1823), and Clarkson (1839). At concerns us here are the improvements which Hellbeck initiated at Genadendal in the educational and administrative field. He was mainly responsible for the establishment of the infant school (1831) and the training School (1838).

During his term of office the rules and regulations were revised and approved of by the Governor. In the main they remained unaltered from 1827 till 1892. In 1838 the emanci-
pation of the slaves affected Genadendal. Hallbeck was responsible for the admittance of many freed slaves. Au
steered the mission of the United brethren through the troubled waters of the days of Dr. Philip in such a manner that
there were few if any, outbursts by the colonists against tee Brethren, although Hallbeck personally held much the
same views as Dr. Philip. 17) Hallbeck also showed his vision by commencing services at outposts. 18) With the death of
Hallbeck on the 25th, November, 1340, a period of steady, vigorous improvement in Genadendal came to an end. The congre-
gation at The end of 1840 numbered 2,187 souls, of whom 693 were communicants. 19)

Third Period.
Brother C.L. Teutsch took over Hallbeck work and
inaugurated a period of consolidation. During his time tae congre-gation gradually increased until ac his death and the succe-
sion of Kölbìng in 1852 the number of 3,000 had been reached. This seemed to be the saturation point of Genadendal for
thirty years later the number was approximately the same: 20)

Doubts as to the legality of the Mules and regulations,
opposition of a section of the residents to the missionaries and the effects of the increasing power of tee colonists in
the Cape government begin to make themselves felt. 21) Into this period als falls the visitation of Genadendal by Bishop
B Breutel, who arrived in 1853. 22) In 1858 Genadendal was granted a legal title recognising it as a 'grant station'
held in trust for the Coloured inhabitants by the Superintendent. 23)
Fourth Period.
With the succession in 1861 of Brother F. *. Kühn as Super-
intendent, 24) Genadendal was fairly set on the road towards independence from the omission Directory in Europe.

Men Kühn departed for Europe in 1865 to take up an appointment on the Mission Board. Bechler succeeded him as Superintendent. He continued the policy already commenced in the previous period and which Kühn had accentuated in the foundation of Berea, viz., that of decentralisation. The work at the outstations of Twistwyk, Greyton and Kopjes Kasteel now became even more important. Towards the end of this period the missionary policy had to adapt itself to the emergence of an industrial migratory labour force. The missionaries followed the workers from Genadendal into Cape Town and up and down the railway lines. With a supreme effort the congregation was able to find the funds necessary to erect a new jubilee Church, inaugurated by Bishop Buchner during his visitation in March, 1893. The economy of the community at Genadendal was very precarious in the last decades of the century and the missionaries were desperately trying to find new 'industries' for the community. The division of the South African mission field into two separate provinces paved the way towards the independence of the Moravian Church in the Western Cape.

This brief historical summary will now be supplemented by a survey of the Moravian methods and the results they achieved.

The aim of the missionaries at Genadendal was to Christianise the Hottentots and this implied civilising them as well, for - in their opinion - the converts had to be gathered together in a community to receive effective religious instruction. Within a Christian community only was it possible to create the most propitious conditions for their wards to experience a truly personal and individual relation to their Saviour. The methods the Brethren used to achieve this can be grouped under three major heads, the religious care for the individual, the inculcation of Christian principles upon the community, and the actual preaching of the gospel to the inhabitants as a group. After an exposition of these measures the various obstacles hampering

---

their effectiveness and the factors facilitating the Christianisation of the detribalised Hottentots will be described. Perhaps the most conspicuous element in the work of these devoted Brethren is the conscientious care they lavished on the individual convert. They have been criticised for this and it is said on account of this that their converts lack strength of character. As soon an the individual joined the community he was immediately put into his station in the hierarchy of church privilege. The lowest rank was occupied by the 'Dew People or ehrlinge. They comprised people who had been permitted to reside in the institution but were not yet converted. They were visited individually by the missionaries. As soon as the missionaries were of the opinion that they sincerely wished to embrace the Christian faith, they were considered as candidates for baptism. During this period they underwent special instruction and their motives were continually investigated by means of the so called 'speakings'. Great caution was exercised in selecting candidates for baptism, as the aim of the missionaries was to gain sincere converts. Thus by Januarys, 1799 the missionaries had only baptised 114 adults and 85 children, out of a population of nearly 800. After the missionaries had satisfied themselves that the candidate truly merited baptism, the test of determining by means of drawing lots, whether Christ approved of the baptism, was carried out. This method was used to determine advancements in church privilege in the beginning. General Synod of 1818 no longer considered the drawing of lots to be essential for important decisions. Children of baptized parents received a different treatment. The Brethren were not opposed to infant baptism. But since Christian children were considered unable to benefit by religious instruction, they received the necessary instruction later.

further advancement in church privilege, he was admitted to the class of the Candidates for Communion. Here again he received special instruction.\textsuperscript{47} There were speakings with him which the missionary and his wife, who reviewed the candidates spiritual life with him reported to the conference of missionaries. \textsuperscript{41} When the candidate was considered sufficiently advanced in his experience of the Saviour, he was permitted to partake of the Holy Communion \textsuperscript{43} lien the converts had reached this final stage they were by no means exonerated from the strict supervision of their thought and actions. They were still expected to attend the ' speakings.\textsuperscript{44} The main criterion in the advancement from one rank to another was not the knowledge of Christian principles or some other external attributes, but the sincerity of the individual's faith, _there are instances of persons permitted to attend Communion although unable to speak Dutch. 

The missionaries were always prepared to give individual advice on spiritual matters and the converts with problems were expected to interview them and they did so. \textsuperscript{45} The first three Missionaries were overwhelmed with such visits as all, who attended the services, felt that they had to see the missionaries individually after each service, but this was stopped in ay, 1795. \textsuperscript{46} Regular meetings with the various classes were, however, organised in which the emphasis was on conversations between the missionaries and the individual convert, known as 'Speakings'. Such meetings were even organised for the members of the congregation who had been deprived of their church privileges but were still living in the institution. \textsuperscript{47} Besides 'class speakings' there were fairly frequently so called 'general speakings' when every member of the congregation was spoken to individually.

vidually.\textsuperscript{48} In the beginning it was possible to reach every member of the congregation in this manner but in 1857 only about a thousand attended.\textsuperscript{49} The 'speaking' classes were divided according to sex, the Brethren speaking to the men and the Sisters to the women.\textsuperscript{50} When Sister Kohrhammer arrived in Lay, 1798, she immediately took up the duty of speaking to the women of the congregation individually.\textsuperscript{50} The missionaries visited members of the congregation, especially when these requested it. They were thus often present at the death of members of the congregation.\textsuperscript{51}

'as the number of inhabitants increased it was found necessary to adapt this stem, although the principle of strict individual care was maintained. In 1658 the community was divided into a number of sections and a Brother and his wife were made responsible for each section. By this method more frequent visits to individuals in their homes could be made.\textsuperscript{52} In December 1666 this system was further improved upon. Genadendal was divided into five districts. to the duties of a Brother and his wife in charge of a district, which so far had been restricted to visiting and comforting the sick was now added the responsibility for conducting the 'general speaking' as well as the class 'speakings'. The reform increased the amount of individual attention received by (teen member of the congregation.) In the individual care of souls the missionaries to some extent made use of assistants from among the inhabitants who were called chapel-servants. They had the duty of admonishing individuals and reproving them for blameworthy conduct. They had also to visit the sick. Hallbeck considered these untrained assistants of no great value.\textsuperscript{54} In spite of Hallbeck's opinion untrained assistants continued to be employed. In 1680 women Bible readers were appointed with the special duty of taking the fiord of God to the sick and aged. They were further expected to visit people who had left off attending the services. The missionaries, however, had no

greet faith in the success of this measure. \textsuperscript{55} Another in-
stance of untrained assistance was of more promise. Between
1843 and 1694, Stephan Prins, a chapel-servant, journeyed
up and down along the new railway line between Worcester and
Kimberly, to care for the souls of the Genadendalers who
had found work there. ark Absalom volunteered to continue
the work after his death.\textsuperscript{56}

The Brethren realised that it would be necessary to
teach the Hottentots and Coloureds to run their community
on Christian lines, if their painstaking work with individ-
uals was to have any lasting effect. For this reason the
congregation was divided according to the station of the var-
iou individuals into groups or 'choirs' of children, young
Len, young women, married people, widows and widowers.
Separate meetings were meld with the general
speaking' were based on these divisions.\textsuperscript{57} in the meetings
the missionaries instructed the various groups in the prin-
ciples according to which the,) should lead their lives in a
Christian family and in a Christian community. parents and
guardians of children for instance, were admonished when they
had not fulfilled the obligations towards their dependents.\textsuperscript{58}
Special care was taken in exhorting the single women as they
were considered to be particularly liable to temptation.\textsuperscript{59}
These choirs held group festivals, every year. The accounts
mention tile children's festival fairly frequently. \textsuperscript{60} be-
efore each festival there was usually a 'speaking'. \textsuperscript{61} the
could be postponed or cancelled as punish lent of a certain
group. \textsuperscript{62} they
served as an inducement for children to come
to school as only those were permitted to take part who had
attended school. \textsuperscript{63} the men were sometimes persuaded to per-
form work for the congregation after such a festival. \textsuperscript{64}

A further method of inducing the community to live according to Christian principles was the formation, in the middle of the Nineteenth Century, of societies such as the Missionary Association, Bible Associations, and Young Men's and Women's Associations. The Missionary Association tried to induce its members to support missionary work outside Genadendal with both prayers and pence. The Young Men's and Women's Associations were formed with the aim of strengthening the Christian character of their members and of imparting useful knowledge. There subscriptions were to be used for the purchase of books and the support of the sick and needy. All associations were accepted with a certain amount of enthusiasm at first, but interest in them soon waned. For instance, the membership of the Missionary Society, dropped from 332 in 1845 to 263 in 1848 because their subscriptions were not paid. In 1866, when it is mentioned for the last time its membership was 37. The Young Men's and Women's Associations had, like the Missionary Association, a low subscription of three pence per month. They are mentioned in the accounts only once, at their inception; hence they cannot have existed for long and had to be re-established in the twentieth Century.

The associations were an attempt to enrich the Christian life of the Inhabitants of Genadendal. Two reasons may be suggested for their failure. They were thrust upon the members by the missionaries, not spontaneously developed; and the spiritual life of the community, seems not to have been developed enough to ensure their survival. Here are two associations, however, which still exist, the two burial societies. They were formed in the last decade of the Nineteenth century and the first decade of the Twentieth Century.

In 1802 the congregation was asked to contribute a certain amount towards some articles needed for the proper performance of divine service. The first subscriptions were at the rate of one shilling per person per annum. At first the members of the congregation were so eager to pay that a

money for a new church. With the help of friends from overseas the sum of £3100 was raised by 1893, of which the congregation itself had collected £1225. It also net the debt of £338 which remained after the church had been built. Brother Hettasch was both architect and supervisor of the building operations. He worked with the help of two Genadendal carpenters, a German mason, a German ship's caretaker, and about 40 labourers from the village who came every day. The church which seats 1400 people was inaugurated by visiting Bishop Buchner on the 15th, March, 1693.

Frequent services conducted within the church, were based on those traditional in the congregations of the United Brethren. In March, 1793, the first instructions in the scriptures were inaugurated commencing one hour before sunset. Any more were added on until in 1892, there was a service practically every evening of the week.

The order of services was as follows: On Tuesday evening Old Testament exposition, on Wednesday a singing meeting, on Thursday a service for the native assistants, both male and female, ... On Friday evening there was exposition of the New Testament, and on Saturday another singing meeting, at which the naive teacher ...

In 1860 a morning prayer was introduced. It was very well attended even in unpleasant weather. Men and women sat in separate sections of the church during all services. He most important day for religious services though, was of course 'Sunday. In 1832 they were livened up by an organ presented by a lady in France, who had visited Gene-

dental. Sunday services were described by a visitor in the early Sixties in the following way:

"I found the religious services very, edifying. In the forenoon, after the instruction for the candidates for baptism, the church litany was prayed in the course of which certain passages were sung, the organ being played by a pupil of the training-School. The congregation then dispersed for a short tie, and afterwards reassembled for the sermon.

which I had been requested to deliver. ... In the afternoon, two adults were baptized. The missionaries delivered a suitable address, after which the Litany appointed for such occasions was read and sure. At the evening the sermon:

'The Predigt' was delivered after more singing, by a missionary cabinet-maker, in Dutch, very ranting, and not very wise: the congregation were singularly decorous and attentive, but did not seem at all excited or impressed. The service lasted three-quarters of an hour, including a short prayer and two hymns.

On the Treat festivals of the Church the special litanies of the United Brethren were performed by the congregation, for instance, the famous Easter Litany sung before sunrise on the burial ground. In a similar solemn manner were celebrated the awakening of the little girls at Herrnhut in 1727, and the Mission Festival.

The first native assistant to officiate at a service was Ezechiel Pfeiffer who in 1851 held the evening service. The congregation was very impressed.

There were two main motives for extending missionary activity to outstations beyond the confines of Genadendal. The first was that the missionaries increasingly felt that there existed a need for serving the surrounding country. The second reason was that the missionaries feared that the numerous labourers outside Genadendal would decline in spiritual matters if they lost contact with the congregation. Bishop Halleck was the first missionary to conceive the idea of serving the labourers on neighbouring farms whose owners allowed the Brethren to hold services there. In Lay, 1839 Halleck preached for the first time on the farm atjesgat. Its owner, a Mr. Grönewald, was a sincere Christian and a great friend of the Brethren.

was founded at Kopjes asteel, where a chapel, was completed in 1841.\textsuperscript{91} The most important of this type of outpost station was Twistwyk, the farm of Commandant Linde. A chapel was inaugurated there in July, 1653.\textsuperscript{92} The work at these places was liable to be interrupted when a farm changed hands.\textsuperscript{93}

From 1803 when kohrhammer and his wife, at the vest of Governor Janssens, proceeded to the camp for hottentot soldiers at Wynburg among whom were many from Genadendal,\textsuperscript{94} the Brethren took it upon themselves to follow members wherever they were driven by economic necessity. At the station known as Beet, had a special status. It was situated on Genadendal land and had a resident missionary. The founding of Bera due to the congestion at Genadendal.\textsuperscript{95} The missionaries chose a Coloured man because it was cheaper for him to travel and he could devote more time to this work. Brother Hettasch for instance, undertook similar tours and travelled as far as Kimberley.\textsuperscript{96} A further step in this direction was the establishment of the church in Cape Town mainly for inhabitants of Genadendal who had found work there.

in the neighbouring valley, settled against their will at first, it relieve to overcrowding. a house and a chapel were erected at Berea and a missionary was posted there.\footnote{98} in October, 1855 the chapel was consecrated by the first missionary Brother B. liar'. The visiting Brother Buchner did not think that Berea merited the full time attention of a healthy man. in consequence the resident missionary often held an additional office.\footnote{100}

On outstations the method of instructing the members and the care of the community was identical with that in Genadendal, although on a smaller scale. 'Speakings' were held at all outstations. As soon as possible naive school teachers from the training School were posted to them. They usually did a certain amount of religious work.\footnote{12}

A number of factors hampered the application of these methods. These factors derived mainly from the mentality of the Hottentots. Idle problem of language, one of the difficulties in missionary work generally, was not important. Lost of the Hottentots had learned to speak some Dutch when the missionaries arrived. \footnote{103} Even hallbeck, who was very sympathetic towards the Hottentots,\footnote{107} critics them for their lack of energy of mind, inability

to persevere awl their lack of independence of character. But he adds:

...in all probability a great variety of unfavourable circumstances have combined to produce this evil, and that for this very reason the cure is one of considerable difficulty.")

The missionaries fully realised that they had come to a socially backward people, whose faults were a result of the conditions they lived in. The missionaries also found that harvest workers were prone to "fall into sin, one reason being that the labourers were temporarily released from the supervision at Genadendal.  

Certain factors, however, facilitated work among the Hottentots and partially explain the success of the Brethren. Any of the Hottentots told the missionaries that they had heard about Christianity from their European Masters. The Brethren thus occasionally built on foundations laid by others. ) In addition, no resistance was offered to Christian teaching by the traditional religion of the Hottentots. It had lost its hold on them and their tribal system had broken down. The captains, who played a certain role in early Genadendal society were probably only 'kraal' headmen.  

The system of church discipline in Genadendal played an important part in the methods of the Brethren. To understand it a short account of the structure of the congregation is indicated. The affairs of the congregation were controlled by the missionaries and a Kerkraad, whose members were called chapel-servants. It was primarily concerned with administration of spiritual matters, ) and the care of church property such as the poor money. But they had also
secular duties which resembled those of the 'opsieners' (overseers) who formed part of the civic administration of the community. In practice there was therefore an overlap of functions and because of this, chapel-servants and 'opsieners' had common meetings.

In 1827 the Kerkraad consisted of fourteen chapel-servants later increased to eighteen. In fact the missionaries retained most of the spiritual and secular power, and were always in a position to exert pressure on individual members of the kerkraad. The missionaries, who met every day at table, discussed matters pertaining to the congregation. They were the final authority enforcing church discipline. Moreover, the missionaries appointed the members of the Kerkraad and had power to dismiss them for scandalous conduct which involved their expulsion from the congregation.

The post of chapel-servant was not exclusively held by men and in the very earliest journals female chapel-servants are mentioned. The chapel-servants were always communicants and were the most fervent Christians in the judgement of the Brethren. The duties of the chapel-servants can be divided into those concerning the spiritual life of the congregation and the church property and their duties as 'opzieners'. Here, only the former will be discussed. The first chapel-servants were appointed to assist the missionaries in minor duties such as keeping order during services, providing for lighting up the church at evening services and similar responsibilities. Later their duties became more numerous. They took part in the comforting of the sick and other pastoral duties, as we have already seen. Satrobe's impression was that the chapel-servants of both sexes served in the true Christian manner.

122) r. Aces, Diary G., Riau.-Spt., 1809; Appendix A, III, 12.
At the beginning of the ear the missionaries had conferences with the kerkraad to remind them of their duties. These conferences were originally only held to inform the kerkraad of important matters, changes or improvements. The annual meetings were started by the chapel-servant themselves in 1869.

"Our chapel-servants assembled of their own accord in the avenue leading to the burying ground, to speak with each other about the occurrences of the past year, as the related to their spiritual course. He men sat down on one, and the women on the other side. they began, concluded their conversation with a hymn."

By 1813 they had developed into regular meetings with the missionaries. After the introduction of the office of ‘opzieners’ the meetings became more frequent.

"Um diese Zeit zeigten uns die Aufseher und Saaldieners den Wunsch, dass ihnen Gelegenheit möchte gegeben haben, zuweilen zusammen zu kommen, um über die zahlreichen Vorkommnisse in der Gemeine, die auf ihr Ant und ihren Auftrag Bezug haben, mit einander sprechen zu Können."

In 1826 it was therefore decided to have a meeting every month with both the ‘opzieners’ and the kerkraad.

It is laid down in the Rules and Regulations that the church discipline was to be administered by the missionaries alone. It is difficult to distinguish between pure church discipline and the discipline of the settlement, although the government attempted to draw a distinction in 1858. The actual punishment consisted of a reprimand either given privately or before the assembled missionaries, exclusion from church privileges before the missionaries or before the assembled congregation and finally expulsion from the station. These measures were mainly employed in order to combat vice and immorality. Occasionally, however, they were employed to inculcate the true principles of Christian doctrine. Once a communicant was excluded from the

Lord's Supper because of her inveterate hatred of another person. She concurred with the judgement of the missionaries as she felt that, though she had forgiven her enemy she as yee did not love her. 132) A person wao had been excluded or even expelled from Ge nadendal could always be rehabilitated if he proved by his conduct that he was worthy of consideration, showed sincere repentance and confessed his faults. 133) Members under discipline, unless expelled, were still cared for be the missionaries who had meetings with them. 154) Exclusion was surprisingly effective. Backhouse and hallbeck record that the individuals concerned were deeply affected. 135) On the whole, however, persuasion was the most important means of maintaining order in the congregation. Lichtenstein is correct in saying:

"Bs is wirklich zum erstaunen, dass dies alias ohne Zwangsnfttel durch bloss®’ ermahnung hat bewyrkstelligt werden können. Sie kennen durcnaus keine andre Strafe, als Ausschliessung von den Gottesdienst und Verbannung aus der Gemeinde, und such dazu schreiten sie selten und nur, wenn ein ganz verderbtes Subjekt wiederholten (kein Gehör geben will. 136)"

Besides these individual punishments there were cases where the missionaries inflicted joint punishment on Groups. They might postpone the holding of Communion, or cancel the celebration of the festivals of the single Brethren and Sisters. 138) In 1798 the missionaries even threatened to leave the Hottentots altogether if they did not improve their behaviour. 139)

results the three original missionaries achieved were surprising. They themselves were elated at the eager-

cress with which Hottentots flocked to Baviaanskloof. | 140

A Cape Town friend wrote on the 25th January, 1795, that he counted 15e hearers at every meeting he attended. | In 1801 the missionaries reported that the people were eager to be baptized or admitted to holy Communion, and that those not promoted in church privilege used to shed tears.

Thus after only six years of work there were an estimated 705 people on the station. 143

she number in the congregation increases steadily till about 1860, when there were just 200 below the 3,000 mark. An exception to this steady increase came between 1822 and 1826 when Genadendal underwent severe hardships due to bad harvests and a general economic depression in the Cape. The number of communicants showed a similar steady increase, again with the exception of the years 1822-26. In 1861 it reached its peak with over a thousand communicants.

The rate of increase it should be noted was not uniform. it accelerated after 1638 when the emancipated slaves joined the settlement. The group most affected by the emancipation of the slaves was the baptism class, where in 1835 comprised 52 candidates, whereas in 1839 it had increased to three times that number.

of ter 1860, however, there was a steady decrease. the congregation was reduced to 1,875 souls thirteen years later. After 1673 there was again a rise until in 1668 the figure too thousand was topped. The class of candidates for baptism correspondingly dropped to 39 in 1873, but rose to 138 in 1888, in spite of the fact that Genadendal was then no longer an important missionary centre. 144

attendance at the services in proportion to the number of the congregation was greater in the early part of the century than later. In an evening service, attended by Latrobe, 400 attended. 145 hallbeck estimated that three quarters of those at home and not hindered by sickness or...
other impediments attended daily either school or at church.\(^{145}\) 

Attendance of adults at week day services declined after 1860 and in 1878 only 101 adults were present at the 'general speaking.' Attendance improved after 1873 again.\(^{147}\) 

Attendance at Sunday services did not fluctuate as much; it was good throughout the century.\(^{148}\) 

The attendance at the mead services, however, was considerably influenced by the agricultural seasons and the nature and time of the harvest. It was small in the bad harvest years of 1822 and 1823. 

When the harvest was later than usual, mile Christmas services were poorly attended, but the New Lear services were generally well attended. Although a capacious Church had been erected in 1800, the number of worshippers often necessitated separate services elsewhere from 1846 onwards.\(^{150}\) 

In 1880 the church no longer satisfied their requirements. 

This development is the more striking as an increasing number of inhabitants were finding 'lark outside Genadendal for lengthy periods.

the women were far more susceptible to the teachings of the missionaries than the men. One reason for this was, as the missionaries realised themselves, that the men left the set, lament in order to work.\(^{153}\) 

Moreover, in 1807 the missionaries report:

"As for the women, there is a more general desire prevailing to grow in the knowledge and grace of our Saviour."

In 1880 the proportion of women to men in the class of the communicants was three to one, although the number of men was equal to the number of women.\(^{155}\) 

of the visitors to Genadendal were impressed by the attentiveness of the Hottentots and their singing at the
services. Lady Anne Barnard describes their interest and their singing in the following words:

"The service began after the Presbyterian form with a psalm. Then indeed the note that raised itself to heaven was an affecting one; about one hundred and fifty Hottentots joined in the twenty-third psalm in a tone so sweet, so loud, but so just and true that it was impossible to hear it without, being surprised.

...Not a Hottentots did I see in this congregation that had a bad passion in the countenance; watched them closely—all was sweetness and attention; I was even surprised to observe so few vacant eyes, and so little curiosity directed to ourselves;..."

In the middle of the nineteenth Century the tone of the services was not quite so ardent. Lady Duff Gordon, writing in 1862, states that

"...the congregation were singularly decorous and attentive, but did not seem at all excited or impressed...

She too was impressed by the singing, and states that the six-hundred people present at the morel service...made music more beautiful than any chorus-singing I over heard. 158"

And Brother Buchner adds:-

"On both Sundays attendance at the services was excellent, and the singing splendid, for the people are thoroughly musical and have beautiful voices. A native always presides at the cabinet organ and plays without notes..."

Fervour of Christian belief manifested itself occasionally in what was called 'a religious regeneration', usually of short duration. Sometimes there were spiritual stirrings in one congregation, from which would emanate prayer unions, and spontaneous singing. 162

She tenor of confession made by converts to the Brethren, shoes that many sincerely believed that they had experienced the living Christ. 163

on their death beds. The Brethren admit, however, that a number of their wards were converted genuinely only in the face of death. Halbeck, writing in 1821 states:

"...that most of the Baptized and Communicants, when tried by affliction, are pattern of Lord."

Brother Buchner towards the end of the Nineteenth Century reports:

"...what struck me very forcibly, was that when we made visits in the village, all people and especially the women, at once began spiritual conversation. The people are deeply interested in spiritual things; they have a good degree of religious knowledge, and feel deeply on such matters. They manifest an uncommonly childlike confidence in the religious sphere, and a quick perception of the grace of our Saviour." 

the Brethren were sober minded enough to realize shortcomings in their charges. They complained of occasional hypocrisy. Such complaints increased after 1850. Visiting clergyman refer to the formally of the congregation at Genadendal. Buchner, in the context of the statement just quoted, points out that spiritual interest was not infrequently superficial.

If these were the results of missionary labour it be to examine more closely the character of the men and women by whom these were achieved, in general the missionaries of the Unified Brethren were Gm however, except one such as the eldest of the first three missionaries, endrik Marsveld, a Holander and the beloved Bishop Hallbeck, who was a Swede by birth. emphasis was laid on the practical training of these men. thus Künnel, manufactured the famous Genadendal knives.
Beinbrecht supervised the erection of the bridge over the Sonderend, and was an expert on rills and steam engines. 

The theologians too, were simple, diligent men. Hallbeck was described as:

"...a plain, simple-hearted Christian, who visited the sick, and took his turn in the school instructions of ten Hottentot youths..."

According to Schneider, Schwinn's wife was unable to sign her name on her passport, the only case of illiteracy known.

From 1848 to 1869 a medical missionary Brother Roser, was stationed at Genadendal. He was a fully qualified doctor. After Roser had, left a missionary who had taken a short course in medicine was responsible for the health of the community. It was the policy of the Mission Board to have a man capable of caring for the health of the community.

Missionary family life was very much the same for unmarried missionaries as they should marry. His practice was kept up until as late as 1802.

"Ay friend the storekeeper married without Navin ever beheld his wife before they met at the altar, and came on board ship at once with her. He said it was as good a way of marrying as any other, and that they were happy together."

Children of such unions, were educated for the first few years in one infant school at Genadendal. After that they were sent to Europe where were trained as missionaries: met at meal time and talked over the affairs of the day. The description of these common tales, as given by Latrobe in the beginning of the century resembles the accounts from the middle and the end of it.

J. Murray says in 1863:

175 Nchr. 1. 1825: Ber. 3., Apr. - Dec., 1823.

181 exs. z. Aces. reports May 1800.
182 Lady Duff (Gorden, p. 106.
184 Latrobe, D. 92-93.
"About eight of thee reside here with their families, and have in several respects a combined house-keeping. ... they assemble a day at a common table in a large test plain dining-roots, on the walls of which hang portraits of Zinzendorf, Schmidt, and other members of the Brethren's Church... )

And Jacob gives the following description in 1896:

"There are at present sever missionaries now residing at this station, all married... Each 
life: but for the two most important semis of the day - dinner at 12 and supper at 6:50 - all meet 
in the large dining-hall, here they also 
resemble at 2 o'clock for coffee, when they have 
a short respite in their busy life and opportunity for social intercourse... )

The work of the missionaries was divided in the following 

has his allotted share of preaching the gospel, the care of souls, and 
school-teaching. Besides this, each takes his 
part in the secular labour by which the 
expen-ses of the mission are net. There is a corn-
mill which still bring in a little also a smithy, 
a carpenter shop a drugstore, L printing-
officeShirty 

years later, conditions had not changed:

"In addition to the direct spiritual portion of 
the work and the charge of his own district, 
each of tee brethren is responsible for some spe-
cial department which meets the needs of the col-
on - the general store, the mill, the printing-
office, the gardens, &c., and the sisters, in 
addition to the ties of household and family, have 
each their special ministry Jr. the community."

All tee missionaries were very much attached to their 
home congregations in Europe. Great events in their lives 
were Brethren passing through and the European post.189)

The attitude of these missionaries towards the Rotten-
tots and the Coloureds was not over-idealistic. they were 
rear to admit that the Hottentots had faults but the be-
lieved that they were not inherent faults. When they were 
asked to give their opinion on measurer restricting the free-
dom of the Hottentots, trey opposed them frankly. But with 
wise restraints they did not give violent expression to their

vie. Hallbeck, for instance, objected to the vagrancy law of 1834 when civil Commissioner asked him for his opinion. He argued that it not only harmed the Hottentots, but by restricting their movement, it caused the farmers inconvenience. Hallbeck believed that the law was unnecessary, especially if the policing of towns was improved and the control of wine trade made more strict. Hallbeck was convinced that the Hottentots were capable of improvement. Then they had completed the bridge over the Sondereend.

"The people have on this occasion, shewn a willingness and perseverance, unprecedented in the history of the Hottentots at this nation. The building of a bridge particularly as a private undertaking, and an undertaking of the Hottentots, is such an undertaking in this Colony, that it is talked of with astonishment from Cape Town to Grahamstown; and will, I trust, silence those who accuse the Hottentots of incorrigible sloth and stupidity."

Hallbeck was also of the opinion that the school-children at Genadendal had the same ability as those in an English school.

"I think they are just like children in every part of the world, as far as I can judge. There are some of very good capacity, some bad."

Hallbeck, a contemporary of Dr. , was not alone in his championship of . The missionaries at the end of the century were as sympathetic towards the Coloureds as they were then developing in Europe.

In 1832 the characteristics of the position of the farmers who despised the Coloureds and predict tension between the lower and upper classes within the Cape Colony as they were then developing in Europe.

"The close relations, let alone the missionaries and their spiritual charges led to a certain amount of social intercourse. Coloureds served as servants in the European families. Moreover, when the missionaries fell ill, the Hottentot midwives would take care of the European childbirth."

Hallbeck and his wife were prepared to adopt a child. The Hottentots were skilled in the art of healing, and their midwives would take care of the European childbirth. Hallbeck and his wife were prepared to adopt a child.
a Coloured child whose stepmother gas neglecting her and who had been handed over to the care of the congregation.\textsuperscript{195} The main reason why there were no intermarriage between European missionaries and Coloured (native) church members, probably 18y in the feet that the Mission Board sent very few unmarried men and supplied single missionaries with Rives.

This sympathetic attitude of the Brethren earned the gratitude of the Hottentots. Their reverence for the missionaries, was not impaired by the fact that these missionaries obeyed the government strictly and did not actively oppose restrictive legislation directed against their charges.\textsuperscript{196} When Father Harsveld fell sick in 182J thy E in 1882 everyone in Genadendal attended his funeral.\textsuperscript{197} were the men and women who infused into the settlement at Genadendal a Christian attitude to life. Hallbeck was co erect in maintaining that, such an institution could not exist without "...a spirit of Brotherly Love or Charity."\textsuperscript{198}

missionaries were not only in charge of spiritual matters. Until 1816 they were the only secular authorities. To understand what the missionaries had to cope with in this respect, one must be acquainted with the number of inhabitants in Genadendal. An initial estimate of the total number was given in the year 1798. The missionaries reckoned that there were about 700 people 'under instruction.' Probably this is an underestimate, because in 1799 in an official report on the numbers at Genadendal they state that there are 252 men, 521 women, and 661 children, i.e., 1234 souls are listed. After 1803 a decrease set in, because a hundred men were recruited for the Cape Regiment. In 1807 only 747 persons lived at Genadendal. From 1807 onwards, there was a steady increase to the highest total number which was reached in 1860. There were two fluctuations in this population trend. The bad harvests between 1822 and 1826 retarded the increase. The influx of the slaves after 1836 accelerated it. In December 1838 202 persons were permitted to live at Genadendal, and in 1839 a further 430 received permission.

The number of inhabitants reached 3,521, it was reduced to 2,496 in 1870. From this year onward, however, there was a gradual increase again until in the eighties the number remained static just slightly below three thousand. The figures given in the accounts are not quite accurate, for two reasons: firstly, members of the congregation who had left the station were only struck from the books after a number of years, and secondly, the missionaries probably often included the men who were working outside Genadendal. A census taken in April, 1825 during the ploughing season, for instance, shows only 922 people, whereas the total number at the end of 1824 had been 1,242.

In 1875 only 2,344 inhabitants were actually counted to be

at Genadendal, but at the end of the year the number was given as 2,726. 

It is more difficult to gain an insight into the racial composition of the population. The basic stock was probably Hottentot, but with accretions from other races. Lichtenstein maintained that the baptised were all 'bastards' An early settler at Genadendal whose recollections were included in the accounts for 1851, claimed that her father was a European then Lady Duff Gordon visited the settlement in the 1860ies, she met the last 'pure' Hottentot who was estimated to be 107 years old.

, any persons who entered the station, and were referred to as 'Hottentots' by the missionaries were actually half-castes. There were a considerable number of Hottentot women who had illegitimate children by European fathers. Already in 1797 the missionaries complained about the immorality between the Genadendal girls and the dragoons who were posted at Zoetemelkswallei to protect the mission station. In 1866 and 1870 the missionaries reported that irresponsible Europeans created disturbances in Genadendal by bringing wine into the village and having dances with inhabitants. Two Europeans actually resided in the village and were members of the congregation, while a third lived with a Coloured girl in irregular marriage and caused the missionaries serious concern.

From 1809 onwards there was also a Bantu element in the population. These 'Caffres' had been ordered out of the Colony by the government. Those who were permitted to stay had to reside at a mission station. In 1810 one of the first caffre woven, the daughter of a 'captain' was baptized.

A few years later Latrobe visited the "Caffre-Kraal beyond Baviaans River =Ica was inhabited largely by converted Bantu. One of the baptized women tried to persuade him to establish a mission in 'Caffre-Land'.

second largest racial group was formed by the descendants of the slaves. They were mostly of Bantu and Negroid descent. In 1848 the ratio of Hottentots to emancipated slave; was estimated to be two to one.

A graphic description of the external appearance of the Coloured at Genadendal is given by Lady Duff Gordon in 1862:

"she Hottentots, as the are called - that is, those of mixed Dutch and Hottentot origin (correctly, 'bastaards') - have a sort of blackguard elegance in their gait and figure which is peculiar to them; a mixture of Negro or Mozambique blood alters it altogether. The girls have the elegance without the blackguard look; a few slender, most are tall; all 'races' all have good hands and feet; some few are handsome in the face and many very interesting-looking. The complexion is a pale olive-yellow, and the hair more or less woolly, face flat and cheekbones high, eyes small and bright. These are 4 far the most intelligent - equal, indeed, to whites. A mixture of black blood often gives real beauty, but takes off from the 'air', and generally from the talent; but then the blacks are so pleasant, and the Hottentots are taciturn and reserved. The old women of this breed are the earliest hags ever saw; the are clean and well dressed, and tie up their old faces in white handkerchiefs like corpses, ... they are"

It was the general practice in all the settlements of the United Brethren to have a set of rules and regulations determining both the spiritual and temporal conduct of the community. The Genadendal code of rules is first mentioned in the accounts in 1803. Discharged Hottentot soldiers had to agree to it before they were permitted to reside in the village. In 1809 communicants were debarred from partaking of holy Communion when they transgressed the regulations relating to the purchase of alcohol by village.

22) CI. Latrobe, pp. 390.
When Latrobe visited Genadendal he was requested to revise them in the light of comments received from the Missionaries and the rules in force in European settlements of the Unitas Fratrum.  

These 'dodified' rules of 1816 formed the basis of the revised Rules and Regulations of 1827 which were the work of Hallbeck and the missionaries, with, the help of the 'opzieners' and chapel-servants. After they had been read out to and approved of by the assembled men of the settlement a Dutch and an English copy were sent to Governor Bourke, who strongly approved of them.

When in 1858 the Superintendent received the title which granted the Genadendal lands to him in trust for the Hottentots he also received the new regulations revised by the government. These regulations of 1858 embodied three chapters of the revised Rules and regulations of 1827. A fourth chapter was added which provided firstly, that the civil administration of Genadendal should be strictly separated from the administration of the congregation, and secondly that the number of inhabitants should be limited to three thousand.

It was expressly stipulated in these Rules and Regulations of the Genadendal Institute that they did not supplant the laws of the Cape Colony. In the case of a crime against the laws of the Colony the culprit was to be handed over to the colonial authorities.

The first section - appearing in the 1827 document under the heading "Of Christian Doctrine, Fellowship and general Social Duties" - deals with beliefs, religious associations, and relations to other denominations. It is stated that the congregation at Genadendal feels itself a part of the church of the United Brethren, and that therefore the Bible is the basis of teaching and conduct. Sunday should be kept as a day of rest and worship. Only teachers approved of by the directory of the United Brethren could be accepted. As regards moral conduct the emphasis is laid upon...
on strict honesty and on diligence. The members are reminded, however that the goods of this earth are transitory. In general a high standard of moral conduct was expected. Marriage is an institution ordained by God. The violation of the rules of Christian marriage merits punishment by exclusion from congregation and institution. It is laid down that Christians and heathen residents can be legally married. Lastly, the duty of parents to provide their children with a Christian education is enunciated.

The second section - headed in the original of 1827 'Of outward Order and regularity of the institution' - lays down that every inhabitant of Genadendal shall have a fixed place of abode, especially young unmarried persons. It stipulates that houses should be well built and kept in good repair. It gives a missionary the right of inspection and builders are bound to obey his instructions when erecting new houses or altering old ones. 'Opzieners' are entrusted with the duty of allotting garden and arable land and are made responsible for seeing that such land is used properly. When it is not effectively cultivated it can be confiscated and given to more deserving persons. Disputes over gardens and arable land have to be brought before the 'inspector of gardens.'

The conditions under which land in Genadendal was held by inhabitants is defined. The main condition being that such land is only held under the rules of the Institution and therefore, cannot be sold or bequeathed to persons outside the settlement. The owner of a house and a garden was, however, entitled to sell or bequeath his property to another resident on condition that he gave due notice to the superintendent of the institution. If he could forfeit his rights by prolonged absence, unless he delegated a tenable person to take care of his plot. Then folio regulations concerning stock and rules for the impounding of straying cattle. Such disputes as arise out of damage done by stock and over ownership of land should be brought to the missionaries or from certain 'opzieners'. Further, residents were expected to observe a curfew after the evening service. Young people were to be under supervision as much as possible; the were not allowed to participate in recreation likely to lead them into sin. Wine could be brought into the village in small
quantities and for immediate use only. It was prohibited to sell drink in the settlement. The residents were expected to hold themselves available for work necessary for the commonweal, such as repairing roads and the church, and to see that they kept the reads in front; of their lots in an orderly state and that the drinking water was not polluted. The community took care of the sick and infirm and, therefore, the inhabitants were enjoined not to forget the poor box. It was also defined how a person might enter the institution. A thorough inquiry into his previous life was made. If this was satisfactory and he was prepared to abide by the regulations, he was permitted to reside in the settlement on probation. Persons born in the village, had to promise to obey the rules when they were accepted into the congregation. Finally it was laid down, that any person who habitually violated these rules lost the right to reside in the settlement.

The aim of this section then, was to preserve a high standard of public morality and to outline ways of settling disputes peacefully.

The third section - which deals with "Suprintendence of the Institution," - is of a different nature. It establishes the authoritative body which was charged with enforcing the rules, the 'Opziener konferensie.' The basis on which every individual was expected to comply with these rules was that they were agreed to by the residents and were not laws imposed by the Missionaries. It is difficult to say in how far this basic assumption was acted upon. In practice the residents in assembly agreed to the rules and regulations which had been drawn up by the missionaries. what the latter insisted on was that the inhabitants knew the rules. 'Hew people' had to understand and agree to abide by the rules before they were admitted. Persons born in Genadendal were told what the rules of the community were when they were received into the congregation. Besides, the rules and Regulations were read to the assembled congregation at regular intervals.29 The final chapter aided in II.57 by the government aimed at separating the civil administration from that of the congregation and giving the government a greater say in the application of the Rules and regulations. The reasons for this step were two. it was felt that a further increase in the

29 (30 611 Rules and Regulations of the Institution at Genadendal, Revised 1827. ...mark in the margin by Teutsch.)
population of Genadendal would be undesirable and that therefore, the government should be able to control it. Secondly, there had been complaints about tam civil administration of Genadendal by some residents. The government wished to safeguard the civic right of the inhabitants. expulsion 'as to be ', wide contingent on the consent of the magistrate. The right to vote in civic matters was defined. in terms of property. The government reserved itself the right to amend the Rules and regulations on the application of the missionaries and four fifth of the eligible voters. Finally, the right of every resident to take stock found on his land to the pound was reaffirmed.

then the legality of the 1858 Rules and regulations were challenged soon afterwards they were held to be invalid in the supreme court on the grounds that they were not parliamentary Laws. To place the administration of Genadendal on a legal basis it was found necessary to have a special mission station act. This act was passed in 1909 and was accepted in Genadendal only in 1926. The main reasons for, or perhaps the most important reason for the invalidity of the and regulations was the fact that the land on which the institution stood had been granted in trust. It was not private property as for instance the Moravian station at Elim. Residents of Genadendal participated in the administration of the village from the beginning. There are references to the employment of Hottentot 'captains' in the accounts before 1816. These captains were invested with some authority direct from government. The of them possessed a staff of authority. Lie early days captians were responsible for maintaining law and order at Genadendal. They assisted in the collection of taxes and in securing

The government was satisfied with this system of administration. Landdrost Rhyneveld, in 1802, praised the obedience of the Hottentots and pointed out that for a thousand people at Baviaanskloof no Justice of Peace was necessary, whereas ordinarily a Justice of Peace had enough to do among three hundred people. Later this rule by traditional tribal authorities was supplemented by that of the Kerkraad which acquired a number of temporal duties in addition to its church duties. But rivalry between various factions and clannish loyalties were not unknown among the leading residents at the time of Latrobe's visit and caused the missionaries a certain amount of trouble. Perhaps this was one of the reasons why it was decided to institute the office of 'opziener'. The main reason, however, was the fact that Genadendal had increased in size. It was no longer possible for the missionaries alone to keep a watchful eye over the community. When, therefore, the chapel-servants proposed in 1816, that a number of respected persons should be appointed to assist the missionaries, the proposal was adopted. In Lay, 1816 32 overseers met for the first time, with the approval of the Landdrost at Caledon. The 'opzieners' at first worked side by side with the 'captains'. Koopman, who had been the captain in Latrobe's time, became chief overseer in the village and received a daily stipend of two shillings from the government, until his death in 1642. His duties as a chief are nowhere defined.

In the beginning the overseers were appointed by the missionaries. When the Mules and Regulations were revised in 1827 a system of election was included. The qualification for a voter was twofold: the possession of a house and garden and the status of a communicant. Only communicants with 'walled houses' could be elected as overseers. Overseers were not elected regularly but only when a post fell vacant.
Under the 1358 rules and regulations a further qualification war added viz., that only a person who owned a house and gar-
den worth 45 could vote.  

bode of overseers, consisting in 1827 of 18 members and in 1858 of 25 members, together with the chapel-servants, of whom there were 14 in 1827 and 18 in 1856, and the missionaries formed the 'Overseers Conference. It met at least once a month. It was the duty of the conference to settle disputes. Its missionaries were looked upon as a kind of executive and, dealt with unimportant matters between meetings. Reports of actions taken had to be made to the conference, however, and important matters had, to be  

land before it.  

) 

of the overseers were those of maintaining order in the settlement. They were not entitled to make bye-laws for the settlement. They had powers to settle minor disputes. It was their special duty to see that strangers did not enter the settlement. Persons expelled from or permitted to enter Genadendal were informed of this decision in the presence of the 'opzieners' and never without their  

47) 

monthly conference of the overseers was instituted in 1826 at the request of the chapel-servants and overseers themselves. In 1827 it was included in the Rules and Regulations.  

This body conducted the administration of Genadendal for a century.  

can overseers could only remain in office 'during good behaviour'. When, on account of irregularities, an over-
seer was publicly excluded from the congregation he was automatically dismissed from the Conference.

congregation and expulsion from the place. The Rules and regulations reserved to the missionaries the right to administer church discipline.\(^{52}\) Exclusion was the most important means of maintaining discipline and public morality. It was remarkably effective, particularly until Hallbeck's death,\(^{54}\) but even in 1857 Suhl comments on the respect shown for this form of correction. The names of those publicly excluded were read out to the congregation about eight times a year.\(^{55}\) The reasons for exclusion could be religious,\(^{56}\) but in most cases the reason was drunkenness or immorality.\(^{57}\)

The missionaries' powers of expulsion were at first practically unlimited and the Veldcornets helped them to eject recalcitrants.\(^{58}\) When, in 1816, the 'opzieners' were appointed, they were immediately consulted as to the readmission of a repentant expellee. Against the expectations of the missionaries they advocated his readmission.\(^{59}\) The principle that the overseers conference should have advisory powers in matters of expulsion or admission was, therefore, already present in Latrobe's time.\(^{60}\) If a person continually broke rules and if he seduced other residents to succumb to vice, he was expelled.\(^{61}\) Only 54 persons were expelled from the village during the first twenty-five years of its existence.

Towards the middle of the Nineteenth Century, however, these two forms of punishment grew less effective and more difficult to apply. The number of persons excluded from the village dropped sharply.\(^{62}\)

\(^{52}\) There is no evidence that the 'opzieners' at Genadendal could award punishment and inflict 'stripes upon the back with a rod of quince,' although it may have been the case. Wheal, records, Vol. xxxv, p. 331.

congregation every year increased, especially after 1850. Some of the excluded became a centre of opposition to the missionaries. It had become difficult for the missionaries to expell troublemakers after the 1856 revision of the rules and regulations, as they made an expulsion order from a magistrate compulsory, but this power of the magistrate was not upheld in the Supreme Court which virtually made ejection impossible. In 1848 already, the relations of an expelled person often kept him at Genadendal, thus negating the effect of expulsion.

'There were thus minority groups within the settlement, no opposed the accepted form of administration of the community. The main reasons for opposition to the missionaries were two. The less serious but widespread form of antagonism was the refusal of residents to pay the fees levied by the Overseers Conference, although these had been approved of in a public assembly. In 1848 the residents refuse to pay true fee for the herdboy. In 1878 the missionaries complained that the Genadendalers were unwilling to pay their school and congregation fees."

The more serious, though not, so general, fort. of opposition was motivated by the desire for land and for security of tenure. The first manifestation of this was in 1850 when four Colours from Genadendal, who had been promised land as a reward for the services during the 1835 frontier wars, petitioned against an alleged encroachment by neighbouring farmers. The claim was pronounced unfounded by the civil Commissioner and Surveyor General, who had been sent to investigate. A letter from Teutsch, the Superintendent, shows that this petition was presented to the Governor against the sill of the missionaries."

caused trouble by attempting to obtain the status of a municipality for Genadendal. He were allowed to call a meeting for the purpose of asserting the wishes of the inhabitants, but suffered an overwhelming defeat.

This, if successful, would have been tantamount to terminating the civil authority of the missionaries. In 1863 a petition was signed even by some of the overseers and chapel-servants, although it had been expressly decided by them conference that they should not sign petitions to the government affecting the administration of the place. The cause for complain was the refusal of the missionaries to purchase a heavily mortgaged house for the congregation. As a result some of the chapel-servants and overseers were dismissed. The missionaries now felt that the reason for the growing opposition was the fact that they exercised supreme civil authority in the settlement and this was injurious to their spiritual work.

After 1892 another incident occured and the motive was again the desire for more land.

It is thus obvious that internal opposition was growing and that, although the missionaries were still capable of enforcing their authority, the legal weakness of the system should have been remedied long ago. This weakness lay in the fact that Genadendal was not the property of the mission of the Unitas Fratrum but a 'rant station' to be held in trust by the Superintendent of the mission in South Africa.
V.

Land Tenure and relations with the Government.

As Genadendal was a ‘grant station’ and had not been purchased by the mission the government could interfere more easily in its administration than in a station such as Slim that had been purchased by the mission. There were four other spheres of contact between the community and the government. Government supervised the administration of the place. It employed residents as soldiers and otherwise. It influenced the community both, promoting and sometimes obstructing the work of the missionaries. The Coloured inhabitants played a part in the internal political development of the Colony.

The initial grant of Genadendal was made in a resolution of the Council of acting on orders from the Council of Seventeen. By the resolution of the 19th December, 1792, the missionaries were permitted to proceed to Baviaanskloof, to perform missionary work, to gather a congregation and to administer the Sacraments. The Landdrost of Stellenbosch was asked to inform his Veldcorbet that the missionaries should enjoy their protection. Teunissen, the commander of the Company’s post at Zoetemelksvallei, was to provide them with everything they needed. The missionaries would have preferred a more secure title, but when they applied for it to the government it was refused.

The British authorities during the first occupation were prepared to give the missionaries a greater security of tenure. When the missionaries petitioned against encroachments by the neighbouring farmers, the government was willing to investigate the situation. The disputed land was resurveyed and some of it was returned to the institution.

5) BO 34: petition against encroachment by Philip Morkel and Barend Gueldenhuysen, by Loravians, 12th Jan., 1799.
Under the rule of the Batavian Republic (1803-1816) no change of policy was recorded. Under the Second British Occupation difficulty arose about the erection of a church at Groenekloof on the grounds that the 'loan places' on which stations had been established did not belong to the missionaries. Latrobe then wrote to Bathurst, the Colonial Secretary, asking him to secure the land to the mission.

Lord Bathurst instructed Cradock in 1813 as follows:

"I am sure therefore that I am only anticipating your own wishes in conveying to you the Instructions of his majesty's Government to give every facility in our power to the fulfilment of Jr. Latrobe's request, and to secure to the establishment for the use of its congregations either by grant or otherwise as you may deem most advisable, both at Groenekloof and Gnadenthal, such portion of and as the establishment may appear to you to require."

The same time Bathurst informed Latrobe that formal grants of the land occupied by the missionaries would be made to "secure them from ejectment or disturbance in future."

Before Cradock had received these instructions, he had already acceded to a request by the Moravians for a new 'loan place' at Genadendal, as the Landdrost could find no suitable loan place, the neighbouring farmers were made to cede the necessary land to the institution. By way of compensation they received double the area of land they had ceded to the missionaries elsewhere. The thus enlarged area was resurveyed and the survey fee was paid by the missionaries. A diagram of the land thus set apart for the use of the Hottentots' was sent to the missionaries.

Cradock did riot grant a full title to the missionaries because he felt it would develop into a species of mortmain. This would have eliminated the possibility of residents appealing to the government.

in 1850 four dissatisfied Hottentots presented a petition to Sir Harry Smith including a plea for the granting of a regular title for the lands of Genadendal. The investigation which was set on foot then re-opened the question of the mission society's title to Genadendal. The official investigation viz., the Surveyor-General and the civil commissioner at Caledon, recommended that the lands at Genadendal be granted on a nominal quitrent to the Superintendent of the mission in trust for the Hottentots. The missionaries were to remain in full possession of the buildings necessary for the running of the institution, and to retain the right to water and good and such other rights as they had hitherto possessed. The Commission envisaged the early granting of a municipality to Genadendal, when these rights of the missionaries were to be reserved. Both commissioners had been in favour of granting title deeds to the individual plot holders, but realised this to be impossible because of the confusion of rights to land at Genadendal.

Title was not granted to the oravians then but only after repeated appeals by the missionaries. The issue was complicated by the discovery of an error in the survey of 1815 which excluded most of the oldest buildings from the title-grant. Fortunately the Surveyor General did not object to including this in a correct survey. The title was eventually granted and received by the missionaries in 1858 on the conditions which had been envisaged in 1850. The size of the area granted was entered as 5598 morgen.

Simultaneously with the negotiations for the title to the Genadendal lands attempts were, as we have seen, made to introduce individual tenure. The 1850 commission found...
that its introduction would have been very difficult. In 1854 a bill was introduced into parliament aimed at dividing the mission station lands into 'erven' to be given as freehold to the occupiers. The missionaries at Nadendal drew up a petition which was supported by the majority of the inhabitants, who apparently realised the danger of such a development. In a letter to the select committee which considered the bill, Kölbìng argued that the Coloureds would lose their lands if freehold titles were granted to them. The lands at Genadendal were not capable of carrying the population living at the station. The reason why the inhabitants could subsist was that they worked for the farmers during the busy seasons. If land tenure were not specially safeguarded the Coloured occupiers would lose their plots and be dispersed. The granting of the 'erven' in freehold would create an influx of low class Europeans who would disrupt the morals of the Genadendal community. The existing racial feeling was not caused by the presence of institutions but by the fact that "As long as the coloured classes are treated with contempt because they are coloured, this feeling of races will not die away." The bill was not accepted in parliament. A strong body of opinion outside Genadendal in favour of such a division of the lands until 1892 and later. It was Superintendent Henning who then defended the 'clinging to the grants besides, there was a small party of residents in favour of individual title deeds.'

In the beginning the colonial authorities expected the missionaries to police Genadendal for instance, they were instructed to ascertain whether there were any Hottentot deserters at Baviaanskloof. The authorities
were satisfied with their handling of problems of public order. \(^{34}\) In cases when the missionaries were enable to enforce the authority of the government, officials were dispatched to their aid, for instance, when a person resisted expulsion from the village. \(^{35}\) The British authorities tried to give the 'captains' at Genadendal some policing authority but apparently to little effect \(^{36}\)

in consequence it was the missionaries with the help of the "pzieners" who apprehended suspected criminals. These were mainly stock thieves and runaway slaves, \(^{37}\) but also more serious offenders.

Occasionally government officials enforced orders which applied to the settlement such as the order received by Teunissen to limit the number of Hottentots and cattle at Baviaanskloof. \(^{39}\) Others commandeered residents to perform policing tasks, such as the recapture of runaway slaves. \(^{40}\) in 1849, the government appointed a constable with powers to arrest offenders against the law. The first constable as overseer recommended by the missionaries, but after four months a white constable was appointed. \(^{41}\)

As the apprehension of criminals was now a responsibility of the civil authorities it is difficult to understand why farmers still accused the missionaries of being unco-operative in the tracking down of criminals. \(^{42}\)

There does not seem to have been very much work for the constable because he was later male postmaster as well.\(^{43}\) in 1857 a monthly court to be held by the magistrate from Caledon was instituted, but this found so little work that
was later only convened bimonthly.44)

At this stage it seems necessary to review in detail the development of government policy towards Genadendal. The three first missionaries were well received by the authorities of the Company at the Cape. They were advised to stay in Cape Town until Teunissen the commander of the Company's post, Zoetemelksvallei, arrived. Teunissen was instructed to 'assist and advise them to the utmost of his power' and, as described above, did so in the beginning.45) The Landdrost of Stellenbosch too was instructed to protect and aid the missionaries and to order his veldcornets to do the same.46) Thus the government of the company did much to assist the missionaries in the founding of Genadendal.

timer the attitude of the government changed. is was a result of the difficult position of the last Company Governor Sluysken, who had to defend the Cape against British attack hampered by revolts in the interior. Sluysken in deference to public opinion, prohibited the missionaries from ringing the bell and from erecting buildings,47) The most serious interference was Sluysken's order to Teunissen to prevent the overstocking of Baviaanskloof. Ibis prohibited Hottentots from distant parts to bring all their cattle without the permission of their masters. Hottentots, who were not original residents had to return their cattle to where they had come from. He enforcement of this order caused an estrangement between Teunissen and the three missionaries. According to them Teunissen had bribed hottentots to testify
to the authorities in Cape Town that Baviaanskloof was overstocked. Attempts by Marsveld and some Hottentots to procure the revocation of this order proved unsuccessful. On the intervention of friendly farmers the order was rescinded.

These difficulties were not the result of a

of policy. Hen the missionaries fled to Cape Town before Pisani in 1795 the threat to the security of Genadendal by this rebel leader was considered as liht to the authority of the Government by the indignant Governor. when Sluysken had come to an agreement with the swellendam nation, the missionaries returned to Baviaanskloof with his promise of protection. After the surrender of the colony, of the British government towards the mission, he waited on Governor Sluysken, who told him that he had written to

when he visited General Craig he was assured of the protection of the British authorities. Overruling Teunissen's opposition they transformed their promise into actions when some Hottentots petitioned them for permission to proceed to Baviaanskloof they also instructed Teunissen to protect the h hottentots at the Baviaanskloof against the violence of the colonists, who were taking the law into their own hands when they heard of Lee arrival of a Dutch fleet under Admiral Lucas. The strong action of the government, when the farmers around Baviaanskloof threatened to destroy the institution, prevented serious developments. The position of missionaries and Hottentots was made secure by the posting of dragoons to Zoetmelksvallei.

The missionaries were again permitted to ring their bell and to erect a church, although the Landrost of Stellenbosch still looked with disfavour upon the institution. the relations between the British administration and the missionaries remained cordial.
Governor Dundas in 1799 on his tour of appeasement of the frontier. 56 hen the Batavians arrived, in 1302, Dundas recommended the brethren to be care of Janssens.57 attitude of the Batavian authorities was very much the same as that of the first British occupation. Both Janssens and De Mist visited Baviaans-kloof and seem to have been impressed.58 They asked the Brethren at Baviaans-kloof for a chaplain to serve the Hottentot troops in the camp at Wynberg. Konhammer was selected for this work.59 The last act of the Batavian government was to give Baviaan-kloof the core appropriate name of Genadendal.60 ernor Caledon arrived in 1807, Kühnel wrote:

that we lost in Governor Jansen, God has given us again in Lord caledon; who, when Brother bonatz and I called upon him, assured us okras friendship and good will to our Mission.61 The first action of Caledon was to suggest the commencement of a station at Groenekloof (later mamre) and to grant the land for it.62 The favourable attitude of the British authorities is evident in the correspondence between Dawning Street and the castle. The Moravian missionaries were recommended to the special care of the Governors at the cape.63 Successive Governors stated that they appreciated the work of the Moravians and assisted them where they could.64 The increase of the land grant and the securing of the title are further proofs of the favour of the government. When in 1817 Somerset, reported to Bathurst that the missionaries in the Colony had not benefited it, he excepted the Moravians.667 most of the Governors visited the institution,668 some even
after the tape had got representative governments.

The governments, however, made use of the man power available at Genadendal. Hottentots were used in the repercussions of the 'trench Revolutionary Wars in the Colony. later they were employed on the Lantern Frontier against the . Finally they played their part in the Transvaal jar of 1812.

In 1795 the Dutch East India Company was in dire need of troops when an English attack threatened. It did not hesitate to levy hottentots as auxiliaries. Four cannon shots summoned the Hottentots to defend the Gape. the missionaries admonished the Hottentots to go which they dig!, albeit reluctantly. Because of the absence of the government had to provide floor for the dependents of the soldiers. In September, 1795 most of the Hottentot auxiliaries returned. "f their conduct as soldiers the missionaries report:

'he Hottentots ae in general considered as grave soldiers, and were always pot in the van, the farmers and citizens bringing up the rear.""

As the English had difficulties in the interior and their forces were limited, they also recruited men from the settlement. In May, 1796 there were over a hundred men in their service. e congregation was depleted because the men took their wives and children with them. the missionaries had difficulties in feeding those dependents who stayed. After the surrender of the Dutch fleet in Saldanha Bay the colonists acquiesced in the English rule and the English released many Coloured soldiers. )

Governor Janssens in turn called for Hottentot volunteers. in 1803 already successful attempts were made at recruiting Hottentots. In October and September 1803 about 30 Hotten- tots volunteered and joined the forces in Gape. oin the Batavian authorities were especially desirous of having dependable Baviaanskloof men as sergeants and corporals. The rest of the tibia bodied men premise to proceed to Gape when the signal can was fired. Captain Beseur praised their conduct and said their only complaint was the copious swearing of the other volunteers at Wynberg. Governor Janssens quartered the dependents of Hottentot volunteers on the
Baviaanskloof village. 187 women and children arrived there in October, 1804. Soon afterwards the able bodied men, who had not volunteered, were called to Cape Town.\textsuperscript{70)}

After 1806 the English authorities required troops to defend the eastern Frontier. Besides volunteers, 90 men were commandeered to join the army in 1811.\textsuperscript{71)} In the following year 21 volunteers were recruited for a hottentot regiment.\textsuperscript{72)}

Hottentot volunteers on their discharge in the 1810s and 1820s had to promise to proceed to an institute such as Genadendal.\textsuperscript{73)}

Soldiers from the were \textit{highly} valued because:

\begin{quote}
\ldots whilst the hottentot soldier, formerly without sense or feeling of religion, now knows the nature of an oath and appreciates its value.\textsuperscript{74)}
\end{quote}

In 1619 the danger had become so acute that the 105 men with him to join the burgher forces as wagoners. He had been ordered to enlist 120 men but through the intercession of Hallbeck he was satisfied with fewer. She enlisted men had all returned by the end of the year.\textsuperscript{75)}

In February, 1823, Captain Somerset arrived with instructions to recruit Hottentots for the Geese Corps. Lie informed the men of this plan. In May a recruiting officer arrived who only \textit{procured} 13 men. He caused a disturbance on using liquor to persuade others to join the gorges. The missionaries put a stop to this and he complained that the Genadendal people were disobeying government orders. Hallbeck was able to satisfy the authorities and undertook to explain the need for soldiers to his people. She eleven more Hottentots were prepared to go\textsuperscript{76)} in 1835 200 men were levied for a commando. The Genadendal economy was hard hit by the absence of the men, burghers had been discharged.\textsuperscript{77)} The government was forced to supply the dependents with flour. Their commanding officer...
was pleased with the conduct of the hottentots and said they were a model to the regiment. They were only discharged in 1836.\textsuperscript{78}

In May, 1846 over 300 men were levied from Genadendal for the Seventh Kaffir War. They returned in February, the following year. This time they were able to send home some money. They sent letters home fairly frequently. Again they were highly praised by their commanders. Their only fault found with there was that they sometimes drank too much. After they had returned, another attempt was made to recruit volunteers. Favourable terms were offered and eventually about 100 men joined the Hottentot Corps. They were promised land in Kaffraria and a free journey for their dependents to their future domicile near the frontier.\textsuperscript{79}

In January, and February, 1851 many were again prepared to defend the Colony in the Eighth Kaffir War. In the end about 36\textsuperscript{1/2} men from Genadendal served at the front. The three stations of the Moravian Brethren alone, provided 1,000 men for the prosecution of the war. The Genadendalers experienced sharp engagements in the Amatola Mountains and acquitted themselves well. They remained loyal to the government after the Shiloh and at river not Hottentots revolted. Most of these Hottentots arrived back in July, 1851 and immediately recruiting started for the formation of a free corps. As the returned men had been dissatisfied with theirburgher officers, who had seduced the young Hottentot to drinking and card playing, the recruiting was unsuccessful at first. However, over a hundred men from Genadendal volunteered. Some returned but about 70 of theirs remained on the frontier and were loyal to the dissipated life of soldiers.\textsuperscript{80}

When an attempt was made in 1878 to recruit 300 volunteers not one of the beside; was would risk his life as they did not consider the Colony endangered.\textsuperscript{81} in 1681, however, over a hundred men were prepared to join the forces as wagoners.\textsuperscript{82}

The Coloured community also played a part in the con-
stitutional development of the Cape colony. When in 1846 the Colony was stirred to indignation by the plan to land convicts at the Cape, the missionaries felt that this would endanger the moral security of their Hottentots. They therefore drew up a petition signed by 472 coloureds and requested the revocation of this order. In 1849 the residents pledged their support to the Antic-Convict-Association, and when the ship had arrived in Table Bay many Genadendalers signed the resolution passed at the mass Meeting which decided to actively oppose the landing of the convicts.

introduction of the representative constitution in 1653 filled the Coloureds at Genadendal with apprehension and the missionaries had to explain it to them and allay their fears. By this constitution many residents qualified as voters. The elections held in 1854 were fairly quiet, but in the 1856 elections the missionaries were shocked by the copious drinking. In 1669 the candidates for the Upper House provided a roast in Genadendal at which wine was served and the candidates for the Lower House procured votes by bribing members of the electorate. During the elections in 1671 the missionaries estimated that 1500 bottles of wine were brought into the settlement. When, as in 1874, there was no polling station at Genadendal, the successful candidates thanked the Genadendal electorate for their support by sending 450 bottles of wine; wonder the missionaries felt that the right to vote was of no real benefit to the Coloureds at Genadendal. In 1878 they again complain of copious bribing. Unscrupulous candidates made use of the Coloured vote for their own ends, yet the Brethren dared not advise their charges for fear of evoking the opposition of the political parties. Al few „ears better the missionaries characterise the situation thus:

"Tenn ein angehender volksbegücker 'Utz wad Stimme erlangen will, werden hunderte von refund sterling ausgegeben, um die Stimmen der Harbigen zu erhalten, und ist dann der Zweck er-
reicht, dass die Stimmen der Eingeborenen das Parlament Gelangten esetze machen, die parade diese armen Eingeborgen aufs empfindlichste treffen und schädigen.

In 1884 the secret ballot was introduced and this improved the behaviour of voters at Genadendal. The granting of representative and then of responsible government to the Cape Colony made the government subject to censure by the fuming interest, and therefore, the influence of the missionaries on government policy became less effective. The advent of the Afrikanerbond in the 1880ies made the missionaries apprehensive.

We Government, influenced by this party, reduced the financial grants to mission schools. The relations between the community and government were only stabilised when the 1909 Mission Lands Act was applied to Genadendal in 1926.94)

VI.

The colonists were divided in their attitude towards the United Brethren at Genadendal. There were always some who were favourably inclined to the missionaries; others were bitterly opposed.

The first missionaries were welcomed by a number of fervent Christians in Cape Town, and they called on a certain Cloete at Constantia. When the missionaries had established themselves ataviaanskloof, two farmers visited them and one of the two invited them to his home, saying: "Let us be good neighbours." The missionaries visited the farmers and European visitors attended the services at Baviaanskloof. It was on religious grounds that this early friendship between farmers and missionaries was based.

European who attended services on festive occasions are frequently mentioned in the accounts from 11500 onwards to about 1855. From then such visitors became fewer until at the end of our period no persons from the neighbourhood, except clergymen, visited the institution. Until the emancipation of the slaves in 1838, the slaves from neighbouring farms, accompanied by their masters, attended divine service at Genadendal and Christmas and New Year services were generally well attended because farmers allowed their Hottentot servants to go to Genadendal after the harvest had been gathered in. The intervention of Mr. Cloete and his friends saved Baviaanskloof from serious trouble. On receiving Cloete's report on the order limiting the number of cattle at the station, the authorities rescinded the order. Cloete later purchased the land adjoining the mission 'with a view to the safety of the mission.'

There was, however, also a great deal of bitter opposition to the missionaries. The reasons for this opposition are obvious. The farmers feared that the institution at Baviaanskloof would deplete their labour supply because the Hottentots obviously preferred to go there than work for them. The mission lands, furthermore, limited the expansion
of the farmers. In addition the farmers felt that the Hottentots should not benefit from an education that they had never been able to procure for themselves. As Calvinists, the colonists at first opposed the type of religion preached at Baviaanskloof. Finally, they disliked that the missionaries interceded for the Hottentots when they had been ill-treated by their masters.

Certain colonists, therefore, attempted to make the position of the missionaries untenable. They planned a boycott of the mission which was unsuccessful. Farmers tried to detain Hottentots proceeding to Baviaanskloof by such methods as holding back their children. Malicious rumours were started with the aim of deterring Hottentots from moving to the station.

In 1795, when the Cape was troubled by disturbances in the interior and the threat of an English attack, the security of the missionaries too, was threatened. In July Hottentots reported that the farmers who had taken part in the revolt at Swellendam had told them that the school at Baviaanskloof would soon no longer exist. The three missionaries thereupon prepared for flight. On the advice of Teunissen they sent home all the Hottentots who came from beyond the Sonderend River to pacify the insurgents. But on the 20th July, some of the 'nationals' arrived to Inform them of their decision regarding the institution. Kühnel was shown an article in their manifesto which read as follows:

ie will not permit any Moravians to live here and instruct the Hottentots, for as there are many Christians who receive no instruction, it is not proper, that the Hottentots should be made wiser than the Christians, but they must remain what they were formerly.

Those Hottentots who were born on a farmer's estate must live there, and serve the farmer till they are 25 years old, before they receive wages. The Hottentots must live among the farmers and not assemble together as at Baviaans Kloof.

All Bushmen, or wild Hottentots caught by us, must remain slaves for life.

Item, the Moravians were never meant to be employed among the Hottentots of this country, but among the Bushmen...
This manifesto was said to have been sizzled by three thousand. Yet the threats of the 'nationals' themselves did not materialize.

In July the Brethren received a peremptory order from Commandant Pisani, who was reputed to be marching on Rodesand with 800 men, to leave Baviaanskloof immediately. Teunissen advised them to go to Cape Town and promised to take care of their belongings. They left Baviaanskloof on the 31st, July. On their arrival in Cape Town they immediately proceeded to the Governor, who was surprised at the audacity of Pisani. The representative of the 'nationals' in Cape Town, who was negotiating an agreement on the defence of the Colony with the authorities of the company, told the missionaries that Pisani was not one of them and that they would not be tamed if they returned. Pisani was captured by the 'nationals' themselves and handed over to the officials in Cape Town. The Governor was then of the opinion that they would be safe, so in August they returned on the wa...
Cloete, however, it must be mentioned that he produced his title to the farm Weltevreden. The only condition that the Company had imposed was that Cloete was not to drive his cattle through the Sonderend and thereby infringe the rights of the neighbouring Hottentots. Three years later, the missionaries and Cloete’s son came to an agreement. The Hottentots were permitted to graze their cattle on Cloete’s farm twice a week.

In 1799 the missionaries petitioned the English Governor because of the encroachment of two farmers on Baviaanskloof land. Matter was settled in favour of the missionaries after the land had been resurveyed. All the land seized by the farmers was not returned because that would have endangered their financial position. Baviaanskloof was compensated by a grant of money towards the cultivation of the land returned. After this no serious boundary disputes are on record except unfounded claims of certain residents in 1850 and 1907.

The relations between the missionaries and the colonists improved steadily during the first British occupation. The number of visitors to the services held at Baviaanskloof increased. Their attitude towards these services was no longer one of curiosity. They were one of religious sincerity. They permitted their slaves to attend. From eighty to a hundred whites attended the Christmas and New Year services in 1801. They were beginning to appreciate the value of Hottentots educated at Baviaanskloof and meet to prefer Christian servants to heathen. When Lichtenstein visited the settlement he noted that cordial friendship existed between missionaries and the colonists.
After 1802 it was a regular practice for colonists to spend Christians and New Tear at Genadendal. The colonists were accommodated in the mouses of Coloured residents. Sometimes there were over twenty wagons on the 'wer t.' The number of people attending religious festivals decreased after 1850, although in 1869 nearly a hundred Whites attended be services at Easter. In general the attitude of the Europeans had changed, and it is noted with surprise the diary 016 Berea for 1872 that Europeans attended a service together with the Coloured inhabitants.

The missionaries thus had opportunities to influence the religious views of their neighbour. They used hotten-tots to disperse tracts among the farmers. The wealthier the colonists grew in relation to the Coloureds the less frequently did this take place. Colonists soon showed that they were genuinely affected by the teaching of the brethren and special Meetings were held for them. In the early 1830ies the missionaries discerned a definite awakening among the farmers. The Brethren frequently held burial services for deceased colonists in the vicinity. The religious influence of the missionaries over the colonists grew less when they were better served by their own clergy.

The services of the brethren on the outstations were also attended by colonists. In heed some farmers made it possible for the brethren to found outstations on their farms. Healthy colonists occasionally gave valuable presents, for instance Baron Ludwig who presented English, Dutch and German books for the Genadendal library and a bell ringing apparatus for Kopjes Kasteel. During the famine in 1822 Landdrost Schönberg of Swellendam opened a subscription for the
poor in Genadendal. The colonises were, however, criticised by the Rev. J. Murray for not leading a Christian life themselves and thus setting an example to their servants.

There was bound to be some social contact between the farmers and the Coloured inhabitants of the settlement. The missionaries realised from the very beginning that it caused vice and even crime among their charges and that the missionaries went out to work for the farmers. There were the detrimental effects of migratory labour on family life. Both men and women labourers had to sleep in one room. By the tot system the labourers were given wine four to five times a day and sometimes instead of wages. No wonder missionaries expected to learn of regrettable incidents during the harvest season. One farmer gave his labourers plenty of wine but hardly ever money and when they wished to leave he made out that they owed him money. "Canteens" were licensed in the neighbourhood of Genadendal through the efforts of enemies of the mission on the licensing boards. The missionaries criticised the farmers in their accounts because they did not give their coloured labourers enough wages and in fact despised them.

The European entered the village for other than religious reasons. In 1844 for instance a European arrived with a wagon and brazenly commenced to sell wine ignoring the requests of the Brethren and "opzieners" to leave. In 1834 a White youth had to be ejected by the "opzieners" because he was found in houses where there were women only. In the 1860ies the young colonists apparently caused many disturbances. The Brethren had to stop a number of dances organised by whites in the village for their amusement. In 1869 the missionaries feared the visit of European at
crew -ear because of the disturbances they caused. )

'here were some moves made by colonists aired at putting difficulties in the way of the missionaries. the attempt by the colonists to introduce individual tenure at "Genadendal" in Parliament has been mentioned. ) The interrogation of farmer neighbours showed that the instigators of this move had received most of their information from Christian Reitz, who had been excluded from the congregation and had caused the missionaries serious trouble by opening a 'canteen' in the village. ) the farmers objected to the store at Geaendal and the supply of wine to the Coloureds by the missionaries. ) An influential enemy of the mission caused the replacement of the Coloured constable by a white constable. ) Colonists who looked at the mission were at the bottoms of the movement to grant liquor licenses to inhabitants of Greyton. The aim was to make the stationing of a magistrate there necessary as it was felt that "the magistrate at Caledon was too sympathetic towards the Coloureds. ) According to the missionaries a malignant attack on Genadendal by a colonist in the Divisional Council was the reason for the high assessment of Genadendal for the purpose of a road tax. ) Impassioned attacks on the mission sometimes appeared in the press. In some cases the accusations were refuted by outsiders. ) Some of the outcries led to government investigations of conditions at the station. Usually the conduct of the missionaries and the inhabitants of Genadendal was vindicated on such occasions. )

Genadendal was never the cause for a political controversy. ) The records of the United Brethren fission hardly refer to the outburst against The Moravians.
were especially excepted from the accusations which an agricultural society made in 1627 against the missionaries in general. Political attacks on the Moravian stations only became serious during the 1850ies but were never widespread.

A non-farming section of the white population was highly sympathetic to the missionaries. The most important group of people who visited Genadendal and expressed admiration for the work done there consisted of nigh officials.

Frequently, especially in the early years, such people as officers from the Cape Town garrison or from ships in the harbour called. Frequently the village was visited by persons from overseas and often officials of the Indian government. In many cases they presented the mission with generous sums of money. After 1846 these visits decreased as a result of the introduction of a steamship route via the iced sea. The missionaries remark with regret that this development was a loss to Cape Town and to the mission. The missionaries also received visits of sympathisers such as the lad's. Schmidt, who had acted as their host in 1792, and Thomas Pringle, who was laid up in Genadendal after breaking his leg.

The early relations of the Moravian with religious fellow workers were on the whole fairly cordial. In spite of Calvinist prejudice against the United Brethren some leading predikants, such as an bier and Jos, were great friends of the first missionaries. These relations improved rapidly after the inception of the South African Missionary Society. Relations with the Lutheran pastors in Cape gown were always of the happiest.

Then Genadendal had become famous it was visited by

---

70) Nchr. l. 1825: Ber. G., 1824.
many missionaries, some of whom came for help and advice. They the Brethren tried to dissuade Captain Gardiner from going o the 'Zoolahs', they impressed Campbell with their insti-
tution. Dr. Philip visited unadental trice and once spoke in English to those who could follow him in that lan-
guage. Converted Basusus of the kiwis Evangelical Society, who had come with their reachers, talked to the congrega-
tion in their own tongue 'with the aid of interpreters. The she inhabitants of the village took a great interest in the visit of the 8 reverend Head 9 junior. J relations with the Berlin and Rhenish societies were always excellent.
VII.

reason for the favour with which the

Government regarded the colonists looked upon the mission settlement
at Genadendal were that it and the other Moravian stations,
were supposed to be economically sound and that the
inhabitants were taught to work and be thrifty. His opinion was
usually arrived at after a comparison of Genadendal with
Bethelsdorp. The Moravian missionaries themselves did not
believe that the Bethelsdorp Hottentots were less industrious. Then a comparison like this is made it is neces-
sary to take into account the time when the comparison was
made. It must be remembered that Baviaanskloof-Ganadendal
had ten years start of Bethelsdorp. Most of the criticisms
of the latter station are found in early documents. In Ge-
adendal the diligence of the Hottentots could easily be ob-
served in the workshops, whereas the Bethelsdorp Coloureds
were mainly agricultural workers. There were no village indus-
tries for lack of water and of suitable missionaries to teach trades. Moreover, the geographical factor must be
considered. Genadendal in comparison with Bethelsdorp had
undoubtedly the more advantageous setting. It had a fairly
abundant supply of water. Water was available for the mill
and irrigation. Although the soil was not very fertile it
could be irrigated and in Lae Cale this is often important.
Thus Breutel could write of Genadendal:

the gardens, which are well stocked with excellent
vegetables, as well as with orange, peach, and
rose-trees, afford sustenance to the body and plea-
sure to the eyes. A fine plantation of forest-
trees surrounds them, Genadendal is proof of
what industry can effect in south Africa, where an
apple supply of water can be obtained, and in a
locality in which the temperate and the torrid
zones see to join hands."

Genadendal was, however, not a Garden of Eden and, es-
specially in the beginning, the Missionaries and use inhabi-
tants had to contend with many difficulties caused by their
environment. Be abundance of water was not an unmixed
blessing. Fairly frequently the gardens and cornlands were
damaged by floods, Such as for instance in 101 and in 1378.

1) Select Committee Aboriginesi, Hillbeck, 1836.
4) P. Accs. LXVII, 1854: Breutel to Mission Directory (no date).
5) Nohr. 1, 1854: Ber. 6, 1851; ibid., 6, 1879: Ber. 6, Jan.-Jun., 1878.
In the early years the agricultural and pastoral activities of the inhabitants were hampered by the attacks of wild animals. After the Hottentots had killed a large 'wolf' (probably a leopard) in March, 1799 the missionaries exclaimed:

"We were glad to have destroyed so great an enemy to our stock, for there are enough of other descriptions, tigers, jackals, jackals, ... with whom we are continually at war."

Haboons were a menace to the gardens as late as 1890, and a leopard was seen in the grounds at the same time. 7

Another great danger that was continually threatening Genadendal was the threat of veld fires. The parched veld during the summer increased the danger of fires. 8 When a veld fire threatened the bell on the 'verf' was rung and as many people as possible would gather together to fight it. 9 The village possessed a fire-engine as early as 1812 but it was of little use against grass fires. 10 The buildings on the 'verf' and in the settlement with their thatched roofs were and still are very vulnerable to fire. That they were never burnt down even after the fire-fighters had given up hope of saving them was felt to be due to divine intervention. In January, 1878 the wind turned; 11 on another occasions there was rain. 12

The money required to run the institution came from both outside and inside Genadendal. The main income was derived from contributions of the Elder's Conference and from wealthy sympathisers of the mission. In the early years funds were made available by the Society of Friends of the United Brethren Mission in Holland. It together with the Zeyt settlement raised most of the money required at Baviaanskloof up till 1800. 13 Later other societies such as the London Association of Friends of the United Brethen Missions also played an important part in the collection of funds. 14

7) P. Accs. No. 4, 1890: Son of Dr. Drury, G., 29th May, 1890.
10) P. Accs. LXV: Diary G., 1812.
Frequently the accounts enumerate gifts of clothing, bibles and books from these societies. Individuals also gave gifts, such as a fire-engine, medicines, a handmill, an organ for the Genadendal church, and clothing. The distribution of presents of clothing or similar gifts was difficult. In some cases such gifts were sold at low prices and the money was used for the poor box.

In times of need special remissions were made by the Elder's Conference and the friends of the mission. This was the case in the disastrous years of 1823-5. Special donations were also made when a new church was erected, for example at Berea, or for the present Church in Genadendal.

A certain amount of financial help was offered from within the Cape Colony. In 1795 and in 1799-1800 the government of the Colony provided the timber necessary for the erection of a church gratis. In the building of the first house at Baviaanskloof, reunissen procured the building material for the first house at reduced prices.

Before 1846 an important source of such money was made by donations of visitors, mainly officials from India. Slaves in a position to earn money, also made contributions for the poor. A number of colonists sympathetic towards the mission sent aid. Landdrost Schünberg and Baron Ludwig have been mentioned. Later certain farmers provided land for outstations and contributed money for the erection of chapels. The Coloured members of the congregations on the outstations have also contributed in various ways.

also collected funds. 26) The missionaries aim from the beginning was to make the settlement self-sufficient. They therefore, commenced to teach the congregation to pay its way. The first suggestion to the chapel-servants and the congregation was to pay for the lighting of the church. Consequently the first church fee consisted of either a certain weight of tallow to be supplied when stock was slaughtered or sixpence a year. 29) In 1802 the members of the congregation decided to pay an annual church fee of one shilling. 30) In the course of time the amount was increased until in June, 1856 it was fixed at 6 shillings for men over 17 years and 4 shillings for women. 31) However, the willingness to pay was no longer general. In 1870 some members sent a petition to the Governor complaining that they were being forced to pay the fee. 32) Although the petition was not considered by the Governor the contribution was not paid by approximately thirty percent of the members. 33) There were regular collections in church for special purposes, for instance, for mission work in other fields, 34) and the collection of funds for the new church between 1891 and 1893. The Rottentots in the village managed to raise a sum of £225 over a period of three years for their new church. 35) The idea of work for the good of the congregation was always present. When the first church was built in 1799-1800 the women and children gathered stones for the foundation and burnt bricks while the men transported the timber granted by the government. 36) The present church was also built with the help of members of the congregation. 37) Repairs work and improvements on buildings and property used by the congregation were also carried out on a co-operative basis for example the upkeep of the burial ground. 38)
As the mission was to be self-sufficient in order to grow their own food the first three Brethren commenced with preparation of ground for a garden in March, 1793, and later planted a vineyard. Soon the garden supplied most of their provisions and was admired by visitors. Their first attempts to keep cattle and goats were not successful, but soon the Brethren learnt how to look after them. The missionaries, however, it should be noted never used the land for their own profit.

The 'industries' established on the station were to earn a profit to defray expenses incurred on the station. The energetic Kühnel established the knife manufacturing department. By 1797 his knives were being bought and sold in Cape Town at double the price. Kühnel had to make the tools necessary to shape the knives himself, with the help of his Hottentot labourers. In the beginning these knives produced the main income on the station. In 1803, however, they brought in only 300-400 lds. annually. Later the manufacture of cutlery became less important.

A smithy was built in 1811. When Latrobe visited the settlement he combined cutlery and smithy employed 14 Hottentots. The smithy was mainly used to manufacture ironwork needed on the station. In 1847 ploughshares were produced in it.

The mill, built in 1797 to grind corn for the Hottentots and the missionaries was soon used by colonists as well. The mill was continually being improved. In 1818

new millstones from the mine arrived. They were both better and cheaper than those hewn at Stellenbosch. In 1826 a new and larger water wheel for the mill was fitted, and in 1834 a new mill was erected by Klinghardt. The mill was still in use a few years ago.

Of the other trades introduced with the double aim of training craftsmen and of bringing in money for the mission the joiner's shop erected in 1811 and the tannery, must be mentioned. An Irishman was engaged for the express purpose of starting the latter in 1828. It was still producing in 1864. Bigge mentions wheelwrights in 1823, but wagon-making soon ceased to be a profitable undertaking. In 1862 Lady Duff Gordon met "a carpenter, a cabinet-maker, a shoe-maker, a storekeeper..." Towards the end of the century new industries were introduced by the missionaries to provide the inhabitants with a means of making a living.

The 'store' was run by the missionaries for the good of the Bottenbots. Since theottenbots at first had no sense of the value of money they were easily duped by the farmers who supplied them with necessities. The missionaries strongly advised the villagers to buy from their store. The 'store' did, however, assist the station in its efforts towards self-support.

The money derived from the Mission Directory and from the station's 'industries' was spent in various ways. Clothing and food for the 'missionary family' was not very expensive as the missionaries only received small salaries. When buildings had to be erected the expenses rose.

1808 the task of making Genadendal financially independent was judged to be impossible. The only income from the station had been the 300-400 Rds. from Mühle's knives. In 1820, however, when the expenses of the 'missionary family' amounted to 5,000 Rds. or £500 the deficit was only £19. Genadendal reports a surplus in 1834 only, but it is a fairly large sum of £400 and it covered all the deficits in the Western Province in that year. In 1855, when the Berea church was erected the station definitely needed outside financial aid. In 1882 the Western Province stations had again been financially independent for a number of years, but the 1880ies brought depression to the Cape and the Western Province stations were no self-supporting again till 1890. This 'financial independence' refers only to current expenditure.

To judge the standard of living at Genadendal the following fact should be considered. The village grew haphazardly, mainly on the sides of the valley so that the lower lying valuable irrigable garden land could be reserved for cultivation. It differs in this respect from its sister stations at Anan and Almil. Lichtenstein described the village as follows:

"Zweihunder Häuser und Hütten mit daran stossenden kleinen Gärten, in ordentliche Straßen verteilt, geben diesem Ort vollkommen das Ansehen eines europäischen Dorfes...."

A description of the village at the end of the century shows that it had changed little:

76) H. Lichtenstein, I, p. 296-7. (The two hundred houses and huts with the adjoining small garden plots, divided neatly into streets, gave the place the atmosphere of a European village.)
The village, with its fruitful gardens, wonderfully beautiful just now in their fresh young verdure, adjoins the missionary quarter, and fills the basin of the valley in every direction. Genadendal has three thousand inhabitants, and is divided into several sections, Sevenfontein, Klipperstrans, Vlei, Bergstrans and Harklandskloof.  

The number of houses at Baviaanskloof in 1799 was 238, these were probably huts.  

Latrobe counted 256 "cottages and huts." In 1820 there are 283 houses and 90 of these are walled. During the critical years, and after the numbers of dwellings decreased appreciably. In that year there were only 246 houses of which 55 were walled. This tendency continued till 1826, when there were only 219 houses in the village. After that, however, there was a gradual increase until in 1833 there are again 253 dwellings of which 117 are walled. The emancipation of the slaves had an effect on the number of houses in the village. In 1847 there were 250 larger and smaller houses and 217 huts. There was no great increase after this and in 1875 a government census showed that there were 482 houses.

There were thus two types of houses in the village.

In 1799 they were described as follows:

"The huts were of clay, thatched with rushes, some square as in Ireland, others round in the original Hottentot fashion, and brought up to the top without rushes, a hole only being left in the middle to serve as a vent, and another for the door." The huts were built in the native manner by driving poles into the ground in a circle, twelve feet in diameter, bending them and tying them at the top so that the centre of the framework was five feet from the ground. This structure was covered with thatch and skins and it was necessary to

Most of the walled houses were probably built in the following manner. Clay was broken up with plough and harrow. The material won in this way was drawn to the building site by oxen in a bullock’s hide. The clay was then formed into bricks and the wall built a foot high on the first day after which it had to be left to dry for a day. The wall was gradually raised until the roof could be put on. In some cases the gable ends were built with burnt bricks. The cottages were usually divided into two apartments, one for cooking and sleeping and the other for storing field and garden products. Some of the houses were not very well built and in some cases collapsed, injuring the inmates. The building of solid houses was subsidized by the mission from money received in the difficult years of 1822–3. Nevertheless many of the houses were still of rushes and clay in 1842. The subsidizing of houses was continued till 1853 when the money was appropriated for schools and churches. Some of the better off residents had fairly respectable houses. Lichtenstein says that the chapel-servants, usually the most well to-do, had houses very similar to those of the colonists on the border. Lady Duff Gordon lived in such a house in 1862:

"The cottage was thus:—One large hall; my bedroom on the right, Sally’s (her English maid) on the left; the kitchen behind me; Miss aeit’s behind Sally; mud floors daintily washed over with fresh cow-dung; ceiling of big rafter just as they had grown, on which rested bamboo canes close together across the rafters, and bound together between each with transverse bamboo—a pretty b e e h i v e effect; at top, mud again, and then a high thatched roof and a loft or store for forage, &c., the walls of course mud, very thick and white washed."

In 1873 a house was built by one of the inhabitants which cost £103 and for which the owner paid cash. But these were exceptions.

The mud houses sometimes did not stand up to heavy rain as in April, 1878.

Lady Anne Barnard tells us what the inside of the simpler huts looked like.

"I entered one or two of the round ones, - the Hottentots were out, working in the field; furniture there was none, a few sticks were in the centre to boil their keetle, and tied to the sticks of the roof were a few skins, some calabashes, an iron pot, a couple of spoons made of hill of wood, to the end of which a j叩 shell was spliced and tied on, some calabaab ladles and bowls." 97)

The fireplaces were open and raised a foot above the ground. In the evening the inhabitants of the dwelling sat on the raised fire place feeding the fire with twigs. As a result children often fell in and were burned, sometimes even to death. 99)

In 1862, the cottages were described thus:

"All were neat and clean, with good dressers of crockery; the very poorest, like the worst in Saybridge sandpits; but they had no glass windows, only a wooden shutter, and no doors; a calico curtain, or a sort of hurdle supplying its place."

The general impression the houses made on a visitor in 1892 is not much different:

"The houses of the natives ... have mud walls. Mother Earth also constitutes the floor. Though they are all of the same primitive material, and put one storey in height, one sees great variety, for example, in the number, size and form of the windows. Some indeed have no windows whatever,"

97) Nebr. 5. 1879: Ber. 6. Jan. – Jun., 1878. (It was miserable after this rain in those houses with defective roofs. In many of them there was not a dry place to be found; whole families passed the night not much better than if they had been out in the open. The sick in such houses were in a sorrowful condition. It was especially bad in the hut of Benjamin and Rosalie January. It is hardly high enough to stand upright; a terrible stench meets the visitor; the floor was a morass.)

but receive air and light only through the door. ... Their dwellings consist of one living room, one sleeping room and a kitchen; most of them are kept neat and furnished with tables and clean beds."

When the missionaries arrived the Hottentots were clothed in sheepskins. One small skin was worn around the waist while another, which was discarded for work, was draped over the shoulders. Their children were carried on the backs of the mothers under the cover of a sheepskin held up by a thong. Both sexes carried bags made of gazelle skins for tobacco-pipe, flint and steel. There was vermin in the sheepskin clothing of the Hottentots. The only way they knew to get rid of it was to beat the skins with sticks. The missionaries tried to promote cleanliness among their charges. They continued to wear their sheepskins on weekdays, but soon they began to wear clothes they received from the farmer's wives in lieu of payment on Sundays.

Thus when in 1798 Lady Anne Barnard attended an evening service on a week-day, the congregation were all "dressed in the skins of animals," on a Sunday about half of the three hundred people in the congregation were dressed "in coarse printed cottons, and the other half in sheep-skin dresses,..." Lichtenstein noticed that the well to do wore European dress whilst the poorer class still wore skins:

"Sie gehen nach Saumart in leinernen Hemmern und ledernen Einkleidern und tragen Hüte, die Frauen in weissen Wücken, baumwollenen Camisolen mit langen Ärmeln und Kopfzügen. Die niedrigere, rohere Klasse kleidet sich zwar noch in Felle, doch wird durchaus auf Keuschheit geachtet und keine Nacktheit geduldet."

In Latrobe's time some men were still clothed in karcasses and leather aprons. Most of the residents wore European dress for the Sunday services and even dressed their children in linen and calico shirts and dresses. In 1842 the

106) E. Lichtenstein, I, p. 252. (They dress after the 'peasant' fashion in linen jackets and leather trousers and carry hats, the women go in woollen skirts, and cotton blouses with long sleeves and bonnets. The lower, more primitive class still wear skins, but cleanliness is expected of them and no nakedness is permitted.)
107) J.S. Latrobe, p. 93-4.
Brethren themselves complain that the boys often wore nothing but a shirt or a pair of trousers, the girls only a dress of cotton and they blame the inhabitants' lack of thrift for this.\(^{108}\) In 1862 Lady Duff Gordon was impressed with the smartness of dress of the congregation and she praises the cleanliness of the residents.

"Also they are very clean people, addicted to tubbing more than any others. ... They are also far cleaner in their huts than any but the very best English poor."\(^{109}\)

The efforts of the Brethren to teach their wards cleanliness had thus had a measure of success.

Buchner was surprised at the number of people at Genendal who suffered from lung and bronchial diseases. He ascribed the frequency of this affliction to their irregular habits of living.\(^{110}\) Presumably a great number were affected by tuberculosis.\(^{111}\) Genendal was a haven for lepers as late as 1861.\(^{112}\) The village was occasionally ravaged by epidemics and a disease, apparently typhoid fever caused the death of 162 Hottentots in 1800.\(^{113}\) From 1865 to 1867 the same disease returned. It had a disastrous effect on the income of the village as farmers would not employ labourers from Genendal for fear of infection.\(^{114}\) The first severe outbreak of small-pox in the settlement was in 1858.\(^{115}\) In spite of the efforts of Brother Reser, who had 3,000 inhabitants vaccinated in the course of a few days,\(^{116}\) there were 29 cases of whom 10 were fatal.\(^{117}\) There was a second outbreak of this disease in 1882 when the 'Drummond Castle' brought the infection to the Cape. There were 235 cases of whom 54 died. The missionaries had to organize relief. Some colonists sent help, five sent

money and one wagon load of fish. A member of the Upper House persuaded the government to place the sum of £70 at the disposal of the missionaries.\(^{118}\) Shortly before Genadendal had suffered from an attack of epidemic dysentery which started in 1880\(^{119}\) and raged throughout 1881.\(^{120}\) The village also experienced epidemics of whooping-cough and measles. The missionaries blamed the careless nursing of the children by their parents as the cause of many deaths.\(^{121}\)

In good years the diet of the inhabitants of Genadendal was fairly balanced. The staple food was wheat as is evident from the anxiety with which the missionaries followed the price of corn.\(^{122}\) In 1818 Hallbeck calculated the consumption of a thrifty family with two non-earning children. He found that their weekly average consumption was one 'emmer' (56.7 litres) of wheat, 4 lbs. meat, 3-4 lbs. rice, and 2-3 lbs mutton fat besides the vegetables that they produced in their garden.\(^{123}\) In a good fruit season Genadendal had an abundance of deciduous and citrus fruit.\(^{124}\) The inhabitants were, however, not at a loss when the harvest of wheat was bad. They fell back on 'veldkoer' and gathered edible bulbs.\(^{125}\) In 1801 during a famine the inhabitants of the village had to fall back on acorns and roots for subsistence.\(^{126}\) There were also wild almonds which when cooked were nourishing. In the difficult 1820s these were an important part of the diet of the villagers.\(^{127}\) When hard pressed the inhabitants of Genadendal migrated to the coast where they could subsist on fish.\(^{128}\)

A large amount of the food supply of the Hottentots

came from the gardens and arable land of the settlement, especially after they had learnt the rudiments of agriculture from the Brethren. From the very earliest beginnings, however, there was a certain amount of migratory labour, especially during the harvest season. As the population increased and the demand for clothing and other commodities grew, the proportion of people, especially men, who earned their living outside the settlement increased.

The labourers from Genadendal enjoyed a very good reputation for diligence and industriousness among the European population. In 1798 the Brethren claimed that the farmers preferred to employ Christian Hottentots from Genadendal. A certain section of the farmers no longer thought so in 1856.

The labourers from the institution probably marited the reputation they enjoyed. Hallbeck was of the opinion that the converts of other societies were probably as diligent. Another reason for their dependability was that the Genadendals hailed from a more settled community than existed on stations nearer to the border of the Colony. The section of the Cape where it was situated was tranquil.

The men who left Genadendal to seek work found employment mainly as agricultural labourers until after the discovery of diamonds in the Kimberley area in 1869.

In 1797 Barrow stated that "some hire themselves out by the week, month, or year, to the neighbouring peasantry." Soon there was a regular exodus during the ploughing and harvest months. The missionaries realised that the Hottentots were forced to leave the settlement in order to earn a living, but they were of the opinion that with a little more diligence they could have subsisted on the land at the institution. During the ploughing season mainly men went out to work. In April, 1825 out of 1242 inhabitants only 923 were present, but of the 320 persons absent half were...
away for the ploughing season only.\textsuperscript{137}) At harvest increasingly large numbers of both sexes and all ages left the village leaving behind only those who had to take care of the gardens. The harvesting usually began in November but sometimes already in October.\textsuperscript{138}) The labourers returned in the beginning of January. The schools and classes for instruction were normally resumed in the second week of January.\textsuperscript{139}) Difficult times caused an increase in the number of absentee labourers. They also increased the length of time they stayed away as then they went to more distant parts.\textsuperscript{140}) Bad harvests affected the labourers in a two-fold way: their own gardens produced little and the amount of work they were able to get outside the settlement was reduced.\textsuperscript{141})

Before 1828 the Genadendalers must have been in a better position to bargain for wages than the Hottentots who lived on the farms.\textsuperscript{142}) In 1823 labourers on the farms received \textsuperscript{143}) a day, and in 1843 they received one Ryksdaler or 15d. They received besides meat three times a day and wine five times a day.\textsuperscript{144}) Some of the labourers, however, were in debt to the colonists and had to work off their debt throughout one season.\textsuperscript{145}) In some cases wine was given instead of money.\textsuperscript{146}) After 1859 the wages were paid by mines and in the railways proved more attractive than those paid by farmers.\textsuperscript{147})

After 1870, other factors aggravated the situation. Agricultural machinery was being introduced into the Western Cape. This meant less work on the farms.\textsuperscript{148}) Besides, farm work did not afford a steady income right through the year.\textsuperscript{149})

When, as in the 1880s, little work could be had on the railways, Genadendal suffered. There was an arrear in tax of about 5,000 Marks (£250) in that year.\(^{150}\)

The first example of non-agricultural work outside Genadendal was found by the young men on the road to Grahamstown in 1845. They received a koppie (1/6) a day plus food.\(^{151}\) Perhaps the soldiers might be classified as migratory labour, although they did not always get regularly paid. It was different with the wagon drivers in 1880-1 who worked for remuneration only.\(^{152}\)

The discovery of diamonds in the Kimberley area opened up new opportunities for work outside Genadendal. Already in 1859 some young men left for the mines.\(^{153}\)

The male population of Genadendal found a remunerative field of work when the railway from Wellington to the diamond fields was built from 1873 onwards.\(^{154}\) In 1876 there were as many as 400 labourers working on the line beyond Worcester. They earned from 2 to 5 shillings a day.\(^{155}\) The missionaries estimated that until the railway had reached Beaufort West, when a number of the villagers were discharged, about 3,000 reached Genadendal annually from the railways.

Of course not all the money the labourers earned was sent to the village.\(^{156}\) Conditions along the line were in some cases terrible. Some of the contractors who employed Genadendalers exploited them ruthlessly with the result that some labourers did not have the money to pay for the return journey from Beaufort West to Genadendal. They had to walk back a distance of 500 miles!\(^{157}\)

As the line advanced into the interior it became increasingly difficult for men from Genadendal to find work on the railway. The exodus to the towns, especially Cape Town, increased correspondingly. There were sufficient people in Cape Town for the erection of the Moravian church in 1886.\(^{158}\)
After that year the number of people going to Cape Town increased.\(^{159}\)

This, as has been pointed out, affected the ratio of men to women in the latter's favour. In 1825 at the festival for married couples 99 pairs took part, three single men (whose wives were absent) and 40 single women (whose husbands were absent).\(^{160}\) In 1880 the number of men absent had increased and the ratio of men to women among the communicants on the 25th January, was one to two. It is significant that most of the harvest workers had returned by this date.\(^{161}\) In the later 1880ies, however, women began to leave the village in increasing numbers to seek work.\(^{162}\)

When the Brethren arrived at Baviaanskloof in 1792 the Hottentots were essentially cattle herding nomads. The missionaries were of the opinion that they would have to be taught agriculture. This was probably a realistic policy as the Hottentots were increasingly losing land in which they could move around with their herds.

There were many difficulties in the way of teaching the Hottentots agriculture and a settled life. It was difficult to procure sufficient tools. These could only be had in Cape Town and there only at exorbitant prices. The missionaries lent out tools to the Hottentots. Some of these had been acquired from men like Martin Schmidt, their host in Cape Town, who presented them with 50 spades.\(^{163}\) However, by 1799 the Brethren had had some success. Peter Blessier reaped 25 bushels of wheat for every one he sowed. Most of the others reaped wheat twentifold that year, and the harvest of maize and vegetables was plentiful. Imitating the missionaries they planted fruit trees and vegetables such as beans, carrots, and potatoes. The missionaries taught them to discard their aversion for pork. They were beginning to keep pigs by 1799 and these provided them with more fat and more meat than their sheep. In spite of this the missionaries complain that "A lazy heathen nation is not soon trained to industry." Yet they are pleased that only a few lived on 'veldkoen' and that most have accepted the idea of earning something with the work of their hands.\(^{164}\)

helped them in preparing the land when they could. The fruitful land which reverted to the mission in 1802 was ditched by the Hottentots themselves. The missionaries organised the communal work and provided the workers with food. The Hottentots then had sufficient land for gardens and fields for wheat or maize.

Visitors to Baviaanskloof were unanimous in recording the success of the Brethren in teaching their charges the rudiments of agriculture. Lady Anne Barnard noticed that the small gardens of the Hottentots "were not very neat, but each one had something growing in it." Lichtenstein describes the agricultural system on the station as follows:

"Eine jede der Hottentoten Familien hat ausser dem Garten hinter dem Hause, in welchem sie zur Anpflanzung von Gemüse und Obstbäumen angewiesen werden, einen gewissen Antheil an den fruchtbaren Ländereien dieser Niederung, dessen Grösse sich nach der Anzahl Personen bestimmt, die davon ernährt werden sollen. Eine jede muss diesen Acker nach Anweisung der Väter selbst bestellen und erhält Vorschub an Ackergeräth und Saatkor. Der Fleissige wird durch einem Zuwachs seines Gebiets belohnt, dem Nachlässigen ein Theil davon wiederum entzogen." The way in which the missionaries inculcated industriousness was by rewarding the diligent with an increase in land and punishing the indolent by a diminution of their lots. This procedure was incorporated in the rules and regulations of the place and was still enforced in 1896.

Agriculture was practiced in two forms at Genadendal. There were the gardens in the valley of the Baviaanskloof river, and the wheat fields in the valley of the Sonderend river. If a garden was in good order the owner was reliable.

According to Hallbeck people who lived on the produce of their gardens, fields and livestock had the best houses and were in the best circumstances.\textsuperscript{173} This was no longer the case towards the end of the period under discussion. But Buchner was of the opinion that the gardens could, if properly worked produce enough for the inhabitants to have food and to make them able to exchange the excess for other necessities of life.\textsuperscript{174}

The main crops in the gardens were beans, and potatoes. In the beginning maize likewise was cultivated in the gardens.\textsuperscript{175} The orchards contained peach, pear, apricot and apple trees, as well as orange trees.\textsuperscript{176} In January the fruit harvest was usually in full swing and the inhabitants were busy drying their fruit on racks in front of their houses. The fruit crop was usually so abundant at harvest time that the inhabitants subsisted almost exclusively on it. Only the more well-to-do supplemented their diet with fish.\textsuperscript{177}

The account given crop figures for two years, presumably average years.

To make the gardens sufficiently productive they had to be irrigated. As we have seen the missionaries irrigated their garden from the very beginning. The method was extended to the Hottentot gardens later on. In 1822 the diary remarks that by the distribution of water from the mill course the gardens had become very productive.\textsuperscript{179} When rust attacked the wheat in 1826 the irrigation system was improved by building three dams. The work on these dams was paid for by the Mission Directory.\textsuperscript{180} In 1834 a suggestion made by the missionaries to pay one shilling annually for the repair of the water furrows was accepted.\textsuperscript{181} In 1861 a dam 20 feet long,

six feet high and four feet wide was erected for the purpose of irrigation. In the end the whole village was reticulated with irrigation furrows running to the gardens.

If the gardens had in this manner been protected against droughts, it was much more difficult to protect them against rain and floods. In 1831 and 1839 for instance, floods damaged the gardens and destroyed part of the irrigation dams and furrows. Damage to the irrigation system was always repaired by collective labour. When the crops in the gardens and fields failed, Genadendal had an extremely difficult year. This happened in 1822 when the wheat crop failed and the gardens were inundated. In 1880 the drought even affected the gardens.

The whole family was usually engaged in garden work. As in more primitive societies a system of work parties was used. Five or six garden owners would concentrate their efforts on one garden, the owner of that garden providing both food and wine on the days the party worked for him. Then it moved on to the next garden. No wages were paid, the system worked on a basis of reciprocity.

In the 1820ies about 130 lots of arable land were allotted to inhabitants. Except in bad years over 100 were used each year. In 1820 it was felt that there was too little arable land available. Consequently one of the villagers rented a considerable piece of ground from a neighbouring farmer large enough for the sowing of 15 muids (sacks) of wheat.

The lack of arable land is illustrated by the fact that in 1864 only 127 persons worked arable land while 495 persons owned gardens.

They learned ploughing from the Brethren. In July, 1820

Hallbeck saw seventeen ploughs in action. Presumably the tenants of fields co-operated in ploughing. The ploughs manufactured in the smithy were suited to conditions at the Cape where an imported cast iron plough was difficult to repair. The missionaries also taught the use of manure. Gradually the Hottentots learned to put these lessons into practice.

"There is a want of manure, and therefore, the land must be left to rest after two or three years' culture. The Hottentots have, however, endeavoured to remedy the evil, by putting straw into the beast-kraal, and otherwise taking better care to collect manure, to which, in former times, they could never be brought to attend."

By these methods the inhabitants were able to produce sufficient cereal crops. In 1824 a villager who had sown half a muid harvested 35 muids (sacks). In 1828 when the government provided seed corn because the crops had failed the previous year, the inhabitants gained 113 muids from 1½ muid of seed corn. The detailed returns for the years 1864 and 1874 are given below.

1818 to 1828 was the most disastrous decade for agriculture at Genadendal. The harvest in 1818 had been bad, and the price of corn very high. The harvest was attacked by rust and although the losses were not in 1829 brought some relief. The 1820 harvest at Genadendal was attacked by rust and although the losses were not as great as in other parts of the Colony, the price of corn affected the economy of Genadendal detrimentally. The missionaries had to

196) Rehr. 1. 1824: Ber. G., 1824.
provide corn at low prices for the 1821 ploughing season. There was such a lack of provisions in 1822 that the Brethren had to use money received from the Mission Board to feed the destitute. They provided three meals a week for a month with this money, but otherwise the Cologents were forced to eat grass. The flooding of the gardens in that year brought greater misery. The famine became so bad that the government had to remit the taxes and granted 4,000 lbs. of rice and 15 bushels of seed corn for relief. This seed corn was sown communally because the individual share was too small to make sowing pay. The harvest in 1822 happened to be fairly good and the price of corn decreased considerably. A large sum of money was received as relief from friends overseas, especially from England. This was used to rehabilitate Genadendal. A certain amount was allocated for the purchase of more seed corn to provide the owners of fields with seed corn free of charge on condition that they returned an equal amount in the following year. Another sum was diverted to the smithy to enable it to repair ploughs free of charge. Bullocks were purchased to make ploughing possible for people who had lost draught cattle during the droughts and the famine. Unfortunately in 1823 the wheat harvest was almost completely destroyed by rust. In 1825 and 1826 rust again destroyed most of their crops. After 1826 there was an improvement. The inhabitants had learnt to rely more on their vegetable gardens which were safe from the rust. In 1839 the crops in the 'saailande' were destroyed by rust again.

204) P. Accs. Moravian Missions &c. Hallbeck, 26th August, 1822. The Missionaries let the receivers of charity do some small task as for instance improving the irrigation furrows etc. before they were fed.

210) Nchr. 5. 1841: Ber. G., 1839.
Most of the land pertaining to the institution was in fact unsuitable for agriculture and could not be improved with the means the missionaries had at their disposal. The Hottentots who resorted to Genadendal brought their cattle and their sheep with them and the land soon became overstocked. The pasturage, remaining undivided, was used communally. The missionaries tried to get the stock owners to contribute towards the wages of a cattle-herd in order that the children would not be used for that purpose and consequently miss school. But it became difficult to collect the necessary money.

In spite of the difficulty of keeping cattle in the Cape Colony especially at Genadendal, Genadendal had a fairly large number of cattle. One of the reasons was that the Coloureds as a matter of prestige liked to own a span of oxen.

The figures reveal that merino sheep were successfully introduced at Genadendal in the second half of the century. Genadendal's only real money product was in fact wool and the production figures for 1864-5 and 1874 are as follows:

<table>

There can hardly have been any wool production before the 1850ies.

Genadendal was not a favourable environment for cattle or horses. Their numbers were often depleted by droughts, floods and pests. In 1822 the stock owners lost or had to disuse.

---

211) Information from Rev. L.A. Schmidt.
215) ibid., 1. 1849: Ber. G., 1845.
slaughter 200 out of 400 of their cattle. In 1828 it was again necessary to slaughter the weak animals because of the drought, and the conditions in 1860 affected stock owners in a similar manner.

In 1859 an epidemic caused Genadendal to lose a large number of horses. In 1854 a lung disease destroyed many cattle. In the following year a similar disease killed between 60 and 80 horses. In the year 1877 a cattle disease destroying cattle raged in Genadendal while it was suffering under the effects of a drought.

The description of the Genadendal agricultural system is sufficient proof that the village could never have subsisted from the produce of its fields, gardens and livestock alone. Therefore, although there were private enterprises in the settlement, the missionaries gave employment to some in the workshops. The missionary households provided a certain amount of opportunities for work. Some servants faithfully served in homes and in the communal kitchen for periods of 25 to 30 years. The main source of employment provided by the mission, however, were the trades set up to make the station self-supporting. These have already been mentioned in connection with the mission economy. They also played a part in the economy of the community. The cutlery, for instance, commenced in 1797, employed four men in 1802-3. In 1815 the combined smithy and cutlery had fourteen workers. Some were engaged in vending the knives among the colonists. The tannery was commenced with the special purpose of providing an occupation for some of the Coloured families in the village.

Besides aiming at earning a profit for the mission and giving employment to the residents, the industries had as their third aim the training of individual tradesmen, especially during Hallbeck’s period. Hallbeck writes that cut
lers, smiths, joiners, wheelwrights and shoemakers were 'trained' at Genadendal and that other tradesmen such as masons, carpenters, thatchers, sayers were encouraged.\textsuperscript{229} He also considered the teaching of writing and arithmetical essential in the school 'particularly ... for those who carry on trades on their own accounts.'\textsuperscript{230} The main reason for failing to establish an independent class of artisans at Genadendal was that their products found no market. Genadendal produced waggons but not in sufficient numbers to compete with financially stronger undertakings. The village furthermore did not have a large enough population to support a great number of independent tradesmen. The influx of mass produced European goods during the latter part of the century destroyed the opportunities for such independent crafts as had previously existed. There had been a few tailors in Genadendal but with the introduction of sewing machines in the 1870ies the women commenced sewing their own clothes.\textsuperscript{231}

From the very beginning there were signs of persons who tried to make money independently by producing articles for sale even though they were only arts and brooms.\textsuperscript{232} Hallbeck referred to wheelwrights, smiths, carpenters, masons in 1819 but he added that labourers were more useful to the institution.\textsuperscript{233} The death of the sole shoemaker for the whole village is mentioned in 1826.\textsuperscript{234} Coloured masons and carpenters were employed in the building of the Blas church in 1835.\textsuperscript{235} The number of artisans was at its highest in the thirties and forties. In 1836, Hallbeck stated before the Select Committee on Aborigines:

"At the station where I live (Genadendal) one-half the population subsists by working at mechanical arts, cutlers, smiths, joiners, tanners, masons, carpenters, shoemakers, tailors and so on."\textsuperscript{236}

Probably many tradesmen also owned gardens and even left the village to work for farmers during the harvest season.

After the middle of the century the number of tradesmen dropped. Occasional references to craftsman appear in the accounts e.g. to the joiner who replaced the brick

pillars in the church with wooden posts, to the wheelwright, who lost his tools and workshop in a fire in 1848, and to the tailor and the joiner to whom pupils of the Training School were apprenticed in 1855, An Irishman set up in Genadendal as a shoemaker and gave the pupils instruction until he died in 1853. In 1856 farmers who were interrogated before a parliamentary committee accused the institution of not training artisans and asserted that there were only one or two smiths in the village. Actually it is surprising that these smiths could exist beside the smithy of the Brethren. The crafts did not disappear completely. In 1892, when the new church was being erected, carpenters from the village superintended the woodwork.

The position as far as shopkeepers in the village were concerned was slightly different. The missionaries did not encourage them especially after they had had an unpleasant experience with a certain Negrini who had been allowed to keep an inn at Genadendal in 1799. They did not prohibit them, however. Both Europeans and Coloureds are known to have carried on business in the village. In 1856 there were four independent retail traders in the village. One of these was Christian Heintz who later added a wine selling business to his shop and caused much of the trouble during the 1856 elections by opening his house to the election agents. He later added an inn in which Lady Duff Gordon lived when she visited Genadendal. The missionaries would not have had any objection to sober traders conscious of their responsibility toward the community. They were against traders who exercised a bad moral influence. In 1857 a European shopkeeper from Caledon opened business, but he closed it down again when his clerk defrauded him of £90.

237) F. Accs. CI. 1847: G.L. Teutsch, 10th April, 1847.

241) C. of G. H. Külbing to Select Committee, 15th Apr. 1856.
A few years later another European, who was living together with a Coloured girl opened a shop in the village and added a wine selling business. This again caused disturbances. The missionaries therefore cannot be blamed for trying to protect their wards from such disorderly traders. As the missionaries ran their own shop and provided the Coloureds with wine, it was surmised that they were doing this purely for their own benefit. The attacks levelled against them on this score were found to be unjustified.

"...we found that the charges of making undue profit in the sale of goods, and of selling or distributing improper quantities of liquor, were disproved, and that the candid explanation afforded by the intelligent and active superintendent of the Moravian mission was amply confirmed."

Such communal work as had to be performed was usually done at the instigation and under the supervision of the missionaries. In 1796 Kuhnau cut trees to bridge the rivulets. He easily gathered a number of Hottentots prepared to help without any remuneration. In September, 1801 after torrential rains arose set about repairing the roads with the help of all the Hottentot men he could muster. The payment of a shilling for the maintenance of the irrigation furrows decided upon in 1834, was suggested by the Brethren. The collective work on the drainage and irrigation system, in fighting fires, in building churches and repairing property pertaining to the congregation had already been described. Perhaps we may explain the willingness of the Hottentots to work on communal enterprises as a relic of tribal organisation, the missionaries superceding the tribal authorities in the management of collective work.

The best example of such unpaid collective work was the erection of the bridge over the Sonderend river. This bridge was commenced, with the financial help of visitors from India, in 1819. A foot bridge 14 feet above the summer level of the water was completed by the end of 1820. Thirty-six Hottentots under the supervision of Brother Heinbrecht broke and transported the necessary stones and worked on the bridge in an exemplary manner.
structure was torn away in the heavy rains of 1821.\textsuperscript{255} As a result the piers were increased in height. The wagon bridge was finally finished in 1823. The work had been done exclusively by inhabitants of the village under the supervision of Heinbricht. The money had been donated to the institution.\textsuperscript{257} The maintenance of the bridge long remained the responsibility of the village and had to be undertaken as voluntary work of the villagers.\textsuperscript{258} In 1861 the Divisional Council paid part of the cost of repair. In 1863 some farmers provided ox-wagons for the transport of earth. These contributions towards the upkeep of the bridge were not nearly sufficient.\textsuperscript{259} By 1861 the Divisional Council had still not accepted full responsibility for the bridge, although it had always been responsible for the road leading over it.\textsuperscript{260} The bridge thus became more of a liability than an asset to the community.

Another example of collective work was the planting of trees, commenced in 1818. The men were asked to volunteer and they responded splendidly. It was decided to sell the wood at a very low price to inhabitants who intended to build houses. The money obtained was to benefit the poor box.\textsuperscript{261} This plan was carried out in the year 1837.\textsuperscript{262}

The missionaries were in the main responsible for poor relief.\textsuperscript{263} Two chapel-servants were made responsible for the poor box.\textsuperscript{264} The inhabitants of the settlement appreciated their responsibility towards the poor. In 1866 some chapel-servants suggested the granting of maize and beans to the poor as the poor box was empty.\textsuperscript{265} In bad harvest years, it was impossible for the congregation to support its own poor. In 1878 the missionaries complain that the mission has to care for the poor of the congregation al-
though they are really not their responsibility.\textsuperscript{266)}

In difficult years the missionaries also provided relief for the community. In 1822 they provided the hungry with meals. The Hottentots were taught to appreciate this by requiring them to improve the irrigation furrows and the burial ground before receiving these meals.\textsuperscript{267)} In 1866 the Moravian institution of a love festival was used to feed the children of Berea.\textsuperscript{268)}

The missionaries interceded with the government when supplies ran low or taxes were too heavy. In 1822 after Hallbeck’s representations the government granted rice and corn to the settlement.\textsuperscript{269)} In 1816 Latrobe obtained the remission of the poll-tax for the poor.\textsuperscript{270)} In 1866 intercession by the missionaries was no longer effective. They could not obtain a reduction of the road dues in that year.\textsuperscript{271)}

In Slangk the missionaries controlled the farm labourers’ wages and thus the whole economy of the community. This was not the case at Genadendal.\textsuperscript{272)} They were, however, prepared to sell buchu leaves collected by the inhabitants and which had to be sold in bulk.\textsuperscript{273)} In the difficult economic conditions of the late 1880ies, another A.G. Hettasch, tried to introduce new industries to open up new possibilities for earning money for the residents. An appeal was made to friends in Europe to donate £400 so that a castor oil industry and a silk industry could be started.\textsuperscript{274)} In 1886 6,000 castor oil seeds were planted and a plantation of 12,000 mulberry trees was progressing satisfactorily. In April of the same year castor oil pressers arrived.\textsuperscript{275)}

Today there are hardly any relics of these late attempts at making the community self-sufficient again.

It is obvious that Genadendal played a part in the economy of the Colony, although its importance decreased from 1840. Genadendal provided a reservoir of labour for the farms in the neighbourhood. The proximity of labour to these farms increased their value in comparison with similar tracts of land elsewhere. The advantage to the farmers was that although comparatively high wages had to be paid them during ploughing and harvest, it was not necessary to provide for their keep during the off season.\(^2\) The Genadendalers provided their share of labour on the roads, railways and mines. Though their main export was labour they exported other products such as wool and buchu leaves and they were of course consumers of farm produce, especially during bad harvest years, and in increasing amounts, of trade commodities. The Coloureds did not prove without initiative. A resident earned his living outside Genadendal by cattle trading in 1833,\(^2\) In 1849 a transport rider lost seven oxen.\(^2\) Thus, if economic conditions seem to stagnate in the second half of the nineteenth century, the reason must not be sought in a falling off of missionary effort or in the listlessness of the Coloured residents. The tendency was the result of the general economic development of the country in that period.

Introduction

Object of this thesis has been to underline a small facet of the influence of the Missionaries on the Coloured people at the Cape in the nineteenth century; to describe the impact of Christianity on the single social unit, which was a fusion of primitive Hottentot and slave elements, subject to strung European (white) pressure, both economic and otherwise.

What was intended as a modest exploitation of the information available has resulted in a perhaps too lengthy treatise. But it is felt that the period of a century covered, warrants as full a discussion as possible.

It is hoped that this thesis has succeeded not merely in telling the story of the mission at Genadendal, but has emphasised the significant interplay of religious, economic and social contacts, ideas and problems in the development of Coloured society at the station. For Genadendal is an example of the growth of a Christian Mission in a colony of settlement.

The sources on which the thesis is based are in the main the periodical publications of the Unitas Fratrum. The English accounts are valuable for letters and contemporary articles by the missionaries, while those in the German language contain an almost complete set of annual reports from the Brethren on the stations. The valuable diaries, extant on the majority of the Moravian mission stations all over the world, as well as the correspondence at Genadendal had to be ignored for the purpose of this thesis because of their length. His material, kept at Genadendal, is invaluable for the history of the missions in South Africa. It should be housed in a place where it will not be lost to posterity.

I am sincerely indebted to Rev. L.A. Schmidt, Rev. P.4. Schaberg, Mr. and Mrs. E. Weder and Berw. D. Wessels whose encouragement and assistance were invaluable to me in finding and selecting the material on which the thesis is based.

The Origins and Thought of the Unitas Fratrum.

The Church that was to send the first protestant missionary, Georg Schmidt, to South Africa, was the Church of the United Brethren.1) This Church had its origins in the work of the great reformer Johann Huss. In 1451 a number of Brethren and Sinters formed the 'Unitas Prat Z0' at Künnewalde in Bohemia. It had a membership of 200,000 in 1131 but it was broken up during the Thirty Years War.2)

The remnants of this Church,3) and other German pietistic elements settled on the lands of Count Zinzendorf, at herrnhut in Saxony. Mere, on the 13th. August, 1727, they founded the renewed Church of the United Brethren. This community was imbued with the missionary spirit. The Moravian refugees, who had left their country because of their religious convictions, were in particular the carriers of this spirit. Count Zinzendorf, their patron, shared their fervour. with his sincere and pious belief in the Saviour, his zeal for the work of God, his community spirit and his talent for organisation, Zinzendorf was precisely the man to foster the potential powers of the herrnhüters.4) Zinzen- dorf's aim in his own. words was: "Die Bekehrung der Heiden, and zwar nur solcher, an die sich sonst niemand machen wür- de."5) On the 21st August, 1'52, the first two missionaries were sent out from herrnhut to the Danish colony of St. Thomas in the West Indies.6)

To understand the spirit of these missionaries, one Must be familiar with the spiritual atmosphere at herrnhut. The community at herrnhut was a product of Pietism,7) and contained a number of different elements.

"On the one hand, it consisted of the Lutheran inwardness of Count Zinzendorf, a man of great personal charm and attractiveness, ....his aim was to unite the true lovers of Christ in small groups,

5) '1') i rd., p. 3. (The conversion of heathen, and only those to whom no one else would go.)
6) ibid., p. 5.
rather after the earlier ideal of Luther and Spener's system of 'conventicies'. He never dreamed of the impossibility of uniting these supra-ecclesiastical groups with Lutheranism. On the other hand, the Herrnhut Community contained the sectarian impulse of the Moravian brethren, who, having incidentally settled upon the Count's estate, became to him a 'chariot and warhorse for gaining the victory; in the process, however, his conventicle idea developed into that of a sect, organised on an exclusive basis, founded upon the voluntary principle, and upon Maturity in Christian experience, exercising powers of discipline and excommunication - a body in which lay men exercised a spiritual ministry.'

These two conflicting tendencies fused, and because the Lutheran Church did not accept the 'conventicle' idea of the Count, a new Church was born of this fusion.

"...its chief aim was to attain the highest possible degree of inward piety and Christ-mysticism, by means of worship, organization, and education." Troeltsch describes the qualities of the Church of the United Brethren in the following words:

'The body of the communicants was to be as pure as possible; and discipline was directed to this end. The size of the community, its system of mutual control, its independence of the State, its legal character as an 'association' (rein), its Welf-102S undertakings which arose in order to secure its existence, its urgent desire to win souls freely to Christ through missions to the heathen, above all the endeavour after an active purity of theian ethic which was to distinguish its members from the 'children of this world': all this gave the Church of the Brethren - partly with and partly 10. against its will - a certain likeness to the sects...."

The ethic of the Moravians originated in the Lutheran tradition by Zinzendorf was tolerant, but through Calvinistic accessions it was also related to Puritanism.

One of the most important elements in the teaching of the United Brethren was their mysticism.

"The Count himself was its not outstanding representative - indeed, it was Zinzendorf who expressed this type of piety in a form which was intimate and spiritual,...Zinzendorf no longer regarded Pietism as an attempt to reform the church; to him it was a voluntary association of individuals who are united with the Saviour who is spiritually present and who can be found in the word,... He transformed Opener's conventicle ideal into a form of free Christian social life, through which he and the brethren, in this community guided by providence, have been

2) ibid., p. 72 j.
3) ibid., p.
11) ibid., p. 720.
rant a special relationship with the person of the Saviour. ....this Pictist Christ-Mysticism, and especially that of the Zinzendorf variety, always regarded ells direct experience as an entirely personal and private relation with the living Saviour."

This element in a sense contradicted the sectarian organization forced on Zinzendorf by the Moravian emigrants. 12) the personal piety evident in the writings of Schleiermacher, 'Lovalis' arm even Goethe, was of importance outside the Church. It is manifested in the practice of making and reading reports on the inner life of individuals. In their missionary accounts this trait in their ideology is one of the most noticeable. Their influence on the rest of protestant Christianity is greater than is generally realised. Their famous book of Biblical 'watchwords' 14) is printed in twenty-six different languages and 300,000 copies are sold annually. The membership of the Church is only 210,926. 15)

the United Brethren have similarities with other 'sets' there, originated in this period, such as the Quakers and the Baptists. 16)

In other directions, however, the relation between Moravian mysticism and ecclesiasticalism is most obscure. Zinzendorf always considered himself in agreement with Lutheran theology. In reality, however, he only agreed with certain sections of Lutheran doctrine. With the ecclesiastical and sociological of Lutheranism he certainly did not agree 17)

Actually there were closer affinities to the Calvinists than to the Lutherans. 18) 'his is one of the reasons why they found favour with the Calvinist colonists at the Cape. Their sectarian ideals led, them to their belief in the 'dignity of work'. 9)

the economic results,...soon appeared in the shape of an excellent and increasingly successful business life, characterized by integrity and frugality."

As the communities had to meet their own expenses and consisted mainly of poor people, this element was strengthened. By these methods they als paid for most of their missionary work. 12)

17) ibid., p. 789.
The missionaries, who cast out to the Cape in 1792 were, therefore, of the artisan class and aimed at creating an elf-sufficient community at Genadendal. The Moravian communities did not provide all the lands for the missionary work. Throughout the Nineteenth Century this 'small but energetic Church' had many outside sympathisers. Financial aid came from many quarters and societies of friends of the Moravian Missions were formed in a number of European countries and America. In 1817 the London Association in aid of Moravian Missions was formed when contributed substantially to the funds of the mission until the end of the Nineteenth Century. Besides, the missionaries at Genadendal report the arrival of aid in kind from sympathisers in England and the Continent.

Earl Russell is reported to have said that the constitution of the church was the most skilfully and wisely balanced of any with which he was acquainted. It combines both democratic and aristocratic elements. It is ruled by bishops, appointed by the supreme legislative body, or, when that is not in session, by the supreme executive body. The legislative body, consisting of the General synod of the Church, has supreme authority. This body is convoked infrequently. When it is not in session a Directory acts with full powers. A special commission is appointed jointly with the Directory to deal with the affairs of the missionary work. To-day the various national branches of the Church care for certain mission fields, although there is mutual help when necessity arises.

The Moravian have always been very careful in the selection of their missionaries. Besides, the number of missionaries in proportion to the total membership of the Church is very large. In 1903 Stewart estimated it to be one missionary for every sixty communicants, whereas other Christian Churches average one missionary for every 3,703

communicants. They never seem to have lacked zealous missionaries prepared to preach the Gospel in the most forbidding regions. The list of applicants is scrutinised by the missionary department; the applicants are free to "accept or decline" the appointment, and they may choose the field they prefer. 27)

The missionaries of the United Brethren did not receive any special training until well into the second half of the Nineteenth Century. The emphasis was laid on the willingness of the applicants to serve as missionaries. As a result few really learned men went out into the field. Often they did not learn the language of the people they were preaching to.

The infractions given to the missionaries were alas in saner terms and were meant to be corrected and supplement by actual experience in the field. Only in 1636 were more precise instructions worked out with particular reference to the different fields. ...he missionaries were instructed to do whatever they did "in the name of God". They were not to be held up to the halo congregations as martyrs. They were to work together in a spirit of brotherly love. Special care was to be exercised in the making of converts and in giving them positions of responsibility. The bringing of converts to Europe was in the beginning strongly disapproved of. 29)

Their attitude towards the heathens was such that they did not try to eradicate all non-Christian customs. They allowed such customs as did not directly interfere with Christian principles to be continued. They were for instance, prepared to baptize a polygamist and allow him to keep more than one wife but they did not allow polygamy among their ordinary converts. Baptized polygamists, however, were debarred from posts of responsibility in the congregation. ...he baptizing of polyandrists on the other hand was prohibited."

31) They found by experience that the best method of influencing the minds of the reaction 4as to preach to them simply on the suffering and death of Christ for the sins of mankind. They found that this approach had far greater
effect than teaching about God. All the heathen seemed to have some notion about God, but they knew nothing of a merciful God and this appealed to them. After 1844 this method of approach of the heathen was followed universally by the Brethren.

Zinzendorf’s early airy as the gaining of a few select converts for the Lord and creating a Christian elite among the heathens, this early aim of the Brethren was modified, o. Leg to the fact that They made more converts than expected. The idea that communities on the lines of the original community at Herrnhut should also be formed among the heathens was introduced. In 1869 the idea of independent churches developing, out of these communities was formulated by the General Synod. 32)

Artisans and traders have always accompanied the actual missionaries. In the beginning most of the missionaries were artisans ad traders. Although the proportion of learned men to the traders and artisans has increased, the practice of sending out la, brethren as raters ad artisans has not ceased. At first the line between lay brethren and ministers was not drawn very clearly. The lay brethren cook part in the actual preaching of the Gospel and care of the congregation whilst earning an income for the mission station. The tendency been to draw this distinction more clearly. The missionary in the service of the society was allowed to work for private profit or own private property. 33) The Sister, who went out as the wives of the

directly concerned in the mission work. They had thus to be carefully selected as Nell. A single missionary always had a wife selected for him by the mission directory at home. 34) in their relations with the colonial governments the Brethren followed the principle enunciated in the Bible: it every soul be subject unto the higher powers. For there is no power but of God: the powers that be are ordained of God. (Romans, 13. v. 1.) They did not attempt to influence the policy of the government directly, but indirectly they hoped that their influence would ameliorate the native policy of the colonial governments and that government would learn

34) Ad. Schulze, p. 56.
to appreciate Christianisation. 35) This quietist attitude was probably a result of the fact that, unlike cue English missionaries, most Moravian originally came from absolutist states of central Europe. 36)

In their dealings with other denominations Zinzendorf instructed the missionaries to let their converts know as little as possible about the divisions of Christianity and to be impartial when their converts noticed these divisions. 37) In the beginning governments and other Churches showed marked opposition, but as they learned more about the United Brethren this attitude changed. During the nineteenth Century they were on friendly terms with missionaries of other denominations, and colonial governments in many cases favoured them. 38) With regard to the European colonists a similar development took place. More gradual and less comprehensive. 39)

were always close contacts between the missionaries and the congregations at home. Frequent visitations of the mission field by important men of the General Synod were undertaken. 40) Regular reports the missionaries sent home and their aide circulation made the congregations aware of the developments in the missionary fields. Books were written about the work in foreign fields and some of Zinzendorf hymns deal with the missionary effort. 41

She missionaries of the United Brethren, were interested in the genuine conversion of the individual rather than in mass conversions; they were practical, persevering and zealous. 42) The most important reason for these laudable qualities was their fervent religious conviction:

...they have some secret of religious life ... some ideal in their Christianity towards which they work without saying touch about it." 43)

unless the full significance of this factor is realised, it will be difficult to understand the self-denying cork of the Moravians in South Africa.

Ziegenbalg and Böving, two German missionaries on their way to India, tried to arouse European Christendom to the degraded condition of the Hottentots without much success. Eventually two Dutch clerics, van Alphen and de Bruyn, asked Zinzendorf and the Herrnhuters to send a missionary to the Cape.

The man selected for this task, Georg Schmidt, was born in 1709, the son of Moravian peasants. Hearing of the United Brethren, he journeyed to Herrnhut. Here he came to be "recognised as a young man of exceptional piety and devotion." He was sent to Bohemia where he suffered six years imprisonment for the sake of his religious convictions. Zinzendorf chose him as the first missionary to the Cape.

Immediately after the request for a missionary at the Cape had arrived in Herrnhut, Schmidt proceeded to Holland where he arrived in arch, 1735. He at once began to learn Dutch. Zinzendorf's friends procured the necessary permission from the council of Seventeen. The Council insisted on a religious examination of the prospective missionary during which Schmidt "made a favourable impression upon the divines." When he had satisfied the clerical commission as to his faith and character, the Court of Directors gave their approval, granted him a free passage to the Cape and provided him with an introductory letter to Governor de la Fontaine who was instructed to "grant him every help and assistance in this good purpose."

On the 9th July, 1737, Schmidt's ship 't Huis te burg arrived in Table Bay. He immediately went to call on the new Governor Kervel. The Secunde, captain RhGenius, a Berliner, invited him to stay at his home. The inhabitants of Cape Town were not over optimistic as to his

---

5) ibid., Chapter vii.

success in converting the Hottentots.  Le Council of Policy likewise doubted that he would be successful. His arrival is recorded in he minutes of this body in the following way:

"And..., by the vessel 't Luis te Rensburg" there has come to land here a certain person ranted Georg Schmidt, with the purpose - if that be possible - of converting iae Hottentots from Heathendom to Christianity, .......... all possible assistance shall be rendered to the aforesaid person for the prosecution of that pious work and the attainment of its good object."

Schmidt was detained in Cape Town for a considerable period. During this time he made the acquaintance of the clerics in Cape Town and of the sincere Christians. The Dutch pastors, Le Sueur and. Kok, raised objection to his performing the sacrament of baptism, but whether they informed him that pastors of the Dutch eformed Church had the sole right to baptise is hard to say.  

In the beginning of September, as opportunity for his journey into the interior presented itself. Rampen, a corporal in charge of the Company’s post at Zoetenelksvallei, was returning to duty. Tee Governor supplied ;Schmidt with provisions and instructed am en to give him every assistance. ) Two Hottentots, Africo and Kibbodo (Kibido ) travelled with them. The party arrived at the Company’s post, on the 13th September, 1737. ) Schmidt first settled at hartebeestkraal near the Company’s post at Zoetemelkevallei, se immediately began building a house. Some of the soldiers and the Hottentots helped him the latter realised that he had not come to take away their cattle or their land. The house was soon completed, but Schmidt was to stay in it for only seven months. A number of Hottentots lived near the house, among them Africo.

Schmidt soon started the work of preaching the Gospel

to them. He also attempted to teach them agriculture so as to make them live a settled like which would favour his work. 15) His description of the Hottentots is not very favourable.

The Hottentots are of a phlegmatic disposition, and sleep much in the day, time. in a moonlight night they amuse themselves with dancing, caper-cutting, and singing, and at the same time watch over their flocks. (These flocks were often attacked by lions and leopards.) Their clothing consists chiefly of two sheep-skins sewed together and cut into 6 or 9 shape. These are kept greased and tied around their waist; but the common story of their wearing cheeps entrails round their arms and bodies is without foundation. Indeed the women often drench their legs, but never entrails. Their riches consist in oxen, cows and sheep and their chief food is milk and boiled meat. instead of bread the eat wild roots, which they also now and then boil. They neither plant sow nor cultivate the ground, for they rove with their cattle from place to place, whenever they can find the greatest quantity of provender. There they set up five or six tents under the control of a captain. They have neither divine worship or any ceremonies, and seem to believe nothing but that there is a great Lord of all, whom they call 'Iuileha, and a devil called 'G b a'le a, of whom however, they do not appear afraid."

That the Hottentots near the post still lived in a nomadic state and that they still dated cattle and sheep. A method of teaching the primitive people the Gospel would not have found the approval of modern missionaries, but the Hottentots listened to the first European who wane to help them. They visited at their fires, distributed tobacco among them and talked to them. Later he tried to learn the Hottentots language. This he found impossible on account of the numerous clicks. He therefore decided to teach them Dutch so that they could understand Wei. In October, 1737 he started a school for this purpose. He prayed with his pupils before and after the lesson and on Sundays he read them the Bible and spoke to them of the Saviour. 17)

The proximity of the Company's post soon proved to be a drawback on account of the soldiery posted there. In February, 1738 he was 'given to understand' that he was too near the post. 16) Pais means that having drawn Lots he saw that

15) Schmidt en sy Opvolgers, p. 8.
17) J. du Plessis, eh. vii; Schmidt en sy Opvolgers, p. b.
God wanted him to leave and showed him where to go. He moved to the opening of the Baviaanskloof where Genadendal now stand. Eighteen Hottentots, who had taken a deeper interest in his teaching, accompanied him. He acting Governor Swellensrebel, approved of this and allowed Schmidt the use of the land. Schmidt's friend and patron, Rhenius, instructed the corporal to assist him again in building.

A beginning was made in what Schmidt called a 'desert place', on the 3rd April, 1753. Soon the missionary resumed his activities, apparently without much success. Willem, one of the Hottentots, alone was genuinely affected and pleaded with his people in the Hottentots language. Besides Willem, Kibbodo and Africo, seemed to be more interested than the rest. He Sunday services were attended by between 35-50 natives.

In November, 1740, Scheidt wrote to Herrnhut about his success and his problems. The people who come to the meetings morning and evening tended their cattle and worked during the day. the school he had established did not last long as "these people do not love perseverance," and the task of teaching them "Low Dutch" was well neigh impossible. Yet he taught them to say a prayer before the meetings. His congregation consisted of 10 men, 10 women, 7 boys, and 5 girls, who were divided into classes. Fifteen could read the New Testament. He reminded the Brethren that he was alone and urgently needed an assistant. He had to contend with three major problems. First, there as the language barrier. Secondly there was the fact that the Hottentots including members of his congregation were prone to drunkenness. Even Africo and Kibbodo fell victims to this vice.

Thirdly, the Hottentots were still nomads and trekked around with their cattle. Once, when his wards had let their cattle stray onto the sown lands and had, not remedied the master when asked to do so, he discontinued conducting services and tee school as a punishment.

The attitude of the colonists towards Schmidt's work is

21) xs. I. Aces. G. Schmidt, 18th ov., 1740.

25) Schmidt en sy Opvolgers, p. 10.
difficult to ascertain. Probably most colonists were indifferent towards this remarkable man. His work did not affect their labour supply as that of later missionaries did. Dutch people visited him in November, 1738 and gave a favourable account of him in Cape Town. Georg Schmidt did not confine his work to the Lottentots, but also preached the Gospel to the colonists. Besides Kampen he also converted the worthy corporal’s successor, Martinsen, and maintained contact with religious people at Cape Town.

In 1738 Kulenkamp’s famous pastoral letter arrived which branded the Herrnhutters and Ziazendorf as heretics. It had a detrimental effect on all the missions of the United Brethren in Dutch colonies. Zinzendorf immediately replied. Nitschmann and tiler, two missionaries of the United Brethren on their way to Ceylon in 1739 carried a letter containing the count’s refutation of Kulenkamp’s charges. Pa it was signed by the members of the Glasgis of Amsterdam, it eased Schmidt’s position for some time.

Schmidt had fairly close contact with the community in Herrnhut. Zinzendorf wrote to him reminding him of the importance the Brethren attached to the death of Christ. The visits of Nitschmann and Eller, who were at the Cape on their voyage to and from Ceylon strengthened the lone worker in his purpose. He community at Herrnhut wince unsuccessfully attempted to send him an assistant. Zinzendorf then sent him a regular letter of ordination empowering him to baptize. Schmidt was overjoyed when he collected the letter at Cape Town in March, 1742. Ultimately this new power conferred upon him was to prove his undoing.

The return journey to Baviaanskloof, Schmidt baptized Willem in a rivulet, “in the name of the Son who has died for us and in the Name of the Father and in the Name of the Holy Ghost.” He gave Willem the name of Joshua. Later at Baviaanskloof he baptized four other members of his congregation whom he considered worthy of this important step.

---

28. Schmidt en sy Opvolgern, p. 11.
29. du Plessis, A history, Oh. vii.
Later they slipped back into their old ways and absented themselves from the meetings.

At Cape Town the baptism astonished the populace and aroused the Dutch Reformed clergy. They were surprised at their knowledge and sent them back exhorting them to remain in obedience to their teacher and what he had taught. They also summoned Georg Schmidt to the Cape and he was interrogated by the clergyman and the Council of Ranie. He remained firm about his right to baptize. The Council warned him that he could no longer baptize until the authorities in Holland had given a decision.

Three Dutch ministers at the Cape assembled in Cape Town and wrote to the classis of Amsterdam, to which the Dutch Reformed Church at the Cape was affiliated. They formed the Classis that Governor Swellengrebel had prohibited Schmidt from carrying out any further baptisms. They maintained that Georg Schmidt was not entitled to teach as he did not conform to the rules of the National Christian synod, nor had he been examined by this body. They pointed out that he taught the faith of the Herrnhut sect. His authority to baptize had been conferred illegally by a written Bull or Act of Count Zinzerulor and not by the Classis.

Hottentots had been baptized irregularly, not before a full congregation. The baptized Hottentots were not fully versed in the principles of Christianity and, as Schmidt had not been ordained by the laying on of hands, they could not partake of the Holy Communion immediately after their baptism as required by the Dutch Reformed Church. They requested the Classis to send out Krankenbezoekers or schoolmeesters to look after the interests of the Hottentots in all places of Schmidt.

The answer of the Classis intimated that the Synods of North and South Holland had pronounced the baptisms of the Herrnhutters out of order. They promised to send out suitable men "to instruct the unfortunate Hottentots and others.

\[^{35}\] Schmidt en sy Opvolgers, p. 15-16.
\[^{36}\] Schmidt en sy Opvolgers, p. 17-18.
beyond the mountain (Over Berg"^{38}) In the middle of the Eighteenth Century the principle of cuius regio, eius religio was as yet too strong for the Classis to allow a missionary of a denomination not their own to preach at the Gape. Besides, the Company feared that a non-reformed church in the Colony would cause dissen-

sion.

without waiting for the answer of the Classis, Schmidt informed the Brethren that his position at the Cane was untenable and the best course of action would be for him to return to procure more favourable conditions from the authorities in Holland.\(^9\) In August, 1743, he received letters from Herrnhut advising him to return. Entrusting his garden to Christian, Schmidt took leave of his small congregation on the 30th October, 1743.

he was granted a free passage to Holland by the Council of Policy. Swellengrebel, Rhenius and others gave him testimonials of good conduct. He Governor promised to pro-
tect the Hottentot community at Baviaanskloof. Schmidt left Table Bay on the 4th March, 1744 and arrived in The\(^{x}\)xel three months later.

Ale congregation left at Baviaanskloof consisted of eleven married couples, eight single men, nine beys and eight girls. His small community of forty-seven Hottentots apparently held together for the first few years.\(^{41}\) Schmidt's and Zinzendorf's subsequent efforts to obtain the permission of the Council of Seventeen for Schmidt's return were unavailing for two reasons: the denominational jealousy and deference to 'public opinion' in the Colony.\(^{42}\)

Martin Schwabler, a former servant of the Company at the Cape, decided to continue the work. He was one of Georg Schmidt's European converts. Schwabler left Europe in 1748, ostensibly to seek re-appointment with the Company, but in reality to proceed to Baviaanskloof.\(^{43}\)

he reported that the community at Baviaanskloof longed for their old teacher. Schwabler did not leave any traces

on the life of the community* tie died during an epidemic in 1756. This was reported by Wynstrauch, another of Schmidt's converts. He also reported that the congregation held together till Joshua (Willem) and Christian (Africo) died in 1755 or 1756, but in 1758 Baviaanekloof was deserted. In 1760 some Indian missionaries of the United Brethren were assured in Cape Town that the Hotentots had not forgotten Schmidt and that some of the baptized were still alive.

Schmidt, back in Germany married and continued in the service of the Church of the United Brethren, he died on the 1st, August, 1785, in the hour that he had, set aside to pray. The United Brethren did not forget its South African station. In 1789, the Synod of the United Brethren decided to renew its work at the Cape. The attitude in Holland towards the Unitas ratrum had changed, with the diffusion of their ideas. A congregation of the United brethren was established at Zeist, and he authorities began to appreciate the value of their work in the colonies.

At the Cape the attitude towards the missionaries, especially among the clergy had undergone a change as well. Two young reformed ministers, an tier and Vos, brought the 'missionary spirit' out to the Cape with them and conducted services for the Hottentots. Thus when Bishop Michel xxx visited the Cape on his return from India, he realised that the tide had turned. After the Lutherans had received permission to form their own congregation it would have been illogical for the Company and the clergy further to resist the establishment of a "Lutheran" mission.

In 1789, the United Brethren petitioned the Company to permit them to send, three Brethren to the Cape. They were to be permitted to choose a suitable location in the interior under the protection of the Company where they would be able to administer the sacraments, preach the Gospel and form a congregation. They farther petitioned that they should have the power to appoint and dismiss the missionaries. The Brethren wave to sail in a Company's ship at a reasonable price. They promised to avoid everything that would cause resentment among the established churches at the Cape. this pea.

5. v. du Plessis, t.41. ix.
tition was granted under three conditions. The number and names of the missionaries should be made known to the Company, they were not to settle in a place already occupied by a Christian congregation, and the missionaries should not be dismissed or appointed without the knowledge of the Company. These conditions, fair in themselves, were open to varying interpretations. The second condition was exploited by certain persons in an attempt to drive the missionaries out of the Colony into the interior. It was under these conditions that Karsveld, Schwinn and Kühnel resumed Schmidt's work at the Cape.

The century of missionary work in Genadendal from 1792 to 1892 can be divided into four periods. The first period of initial difficulties and of consolidation, stretches from the first arrival of missionaries to the visitation of Brother C.I. Latrobe in 1816. The second period, one of vigorous expansion and improvement commences with the stimulus given by the visitation of Latrobe and ends with the death of the beloved and energetic organiser, bishop Hans Peter Ballbeck in 1840. The third period is characterised by the increasing opposition of both the inhabitants at Genadendal and the Colonists to missionary work. It extends from 1840 when CL Teutsch became Superintendent till the 1880ies when Künnel became Superintendent and Berea was founded. The fourth period ushered in developments making for the independence of the Church of the United Brethren in South Africa especially after the division of the mission field into an Eastern and Western province in 1859. It really only comes to a close in 1922 when the first Church Conference for South Africa West was held.

First Period.
The three first missionaries, Hendrik Marsveld, from Gouda in Holland, Daniel Schwinn from Erbach in the Odenwald and Johann Christian Kühnel from Ober-Seiersdorf in the Lausitz were all ordained deacons of the Church of the United Brethren. They arrived in Cape Town in November, 1792 and were cordially welcomed by all those sincerely interested in missionary work. They stayed in the home of one of these friends. The government advised them to proceed to the place where Schmidt had worked as there were still Hottentots there. They proceeded with Teuniseen, the commander of the Company's post Zoetemelksvallei, into the interior. On the 24th December, 1792 they reached Baviaanskloof. They found

1) L.R. Schmidt, Die Broederkerk, p. 12.
3) Schneider, G., p. 40.
ruins of Schmidt’s house and some of the fruit trees he had planted.5) A little further away they found the only remaining baptized convert of Georg Schmidt, old Lena or Magdalena. After greeting the missionaries with the words: ‘hank’ be to God.” she produced a Dutch New Testament concealed in a leather bag covered with sheepskin, in parch a new building at Baviaanskloof had been erected by the Hottentots assisted by two Coloured neighbours. The missionaries then moved to their new home from Zoetemelksvallei. They immediately commenced teaching the Hottentots and they had an attendance of twenty—five on the first day. It was not necessary for them to go out and seek dottentots.  

In July, 1793 the first baptism took place. At the end of 1794 the congregation consisted of thirty—six baptized persons.7) The only major setback at this time occurred in 1795 when the missionaries were ordered, by the insurgent leader Pisani to leave Baviaanskloof. They retreated to Cape Town, out soon returned and recommenced their work.8) The British government was generous in the permission and help it gave for the building of a chapel at Genadendal. The first temporary chapel was dedicated in arch, 1796. In the years 1799—1800 the church, which was in use till 1692 and could over a thousand persons, was erected.

Before this, reinforcements had been sent out. Brother and Sister Kohrhammer arrived in May, 1198, and thus the first woman missionary commenced work at Baviaanskloof. Two years later, Schwinn returned from a visit to Germany to, with his wife, Brother and Sister A. se, and the two brides of Marsveld and Rose, who had been a missionary in Labrador, was sent out to cope with the precarious financial situation, which had arisen on account of the many visitors at Baviaanskloof and Schwinn’s confused bookkeeping. Lien he arrived there we e about 130) at the station. Rose was an efficient and vigorous man. his early death in 1805 was a great blow to the mission.9) Xle period of Batavian rule brought steady improvement at Baviaanskloof and in 1806, Governor Jaiseens suggested the name Genadendal which has since been the sene of the first missionary station at

7) ibid., Journal Bklf. 1794.
The permanent British administration of the Colony since 1806 was sympathetic. Caledon suggested a new station at Groenekloof in 1808. Kuester and Schmitt sad just arrived and there were thus enough missionaries to start the work there. After this, there followed a regular flow of missionaries into the country until in 1611 there were six married Brethren at Genadendal alone.

Nothammer died in June, 1611 and Kühnel in April, 1613. The measure of the Brethren's work in this period can be gauged from the numbers quoted in the diary for 1612. The congregation then consisted of 676 persons, of whom 296 were communicants, while there were 1073 persons living at Genadendal.

Second Period

Visititation of Latrobe, the society's secretary in London, in 1816 had a stimulating effect on the mission. It was during his visit that the overseers' or 'opzieners' conference was established and the Rules and regulations formulated which were to play so important a part in the secular administration of Genadendal. It was due to his insight that the able Hans Peter Hellbeck was entrusted with the task of leading the mission in South Africa.

Hellbeck reached Genadendal early in 1818 and immediately commenced labouring, vigorously for the expansion of the mission. Four more stations were founded during his period of office (1818), Him (1824) – to relieve the congestion at Genadendal – Shiloh (1823), and Clarkson (1839). Concerns us here are the improvements which Hellbeck initiated at Genadendal in the educational and administrative field. He was mainly responsible for the establishment of the infant school (1831) and the training School (1838).

During his term of office the rules and regulations were revised and approved by the Governor. In the main they remained unaltered from 1827 till 1892. In 1638 the emanci-
pation of the slaves affected Genadendal. Hallbeck was re-

ponsible for the admittance of many freed slaves. Au

steered the mission of the United brethren through the trou-

bled waters of the days of Dr. Philip in such a manner that

there were few if any, outbursts by the colonists against
tee Brethren, although Hallbeck personally held much the

same views as Dr. Philip. Hallbeck also showed his vision
by commencing services at outposts. With the death of

Hallbeck on the 25th, November, 1840, a period of steady,
vigorous improvement in Genadendal came to an end. The congre-
gation at The end of 1840 numbered 2,187 souls, of whom 693
were communicants.

Third Period.

Brother C.L. Teutsch took over Hallbeck work and
inaugurated a period of consolidation. During his time tae
congregation gradually increased until ac his death and the succe-
sion of Kölbing in 1852 the number of 3,000 had been reached.
This seemed to be the saturation point of Genadendal for
thirty years later the number was approximately the same.

Doubts as to the legality of the Mules and regulations,
opposition of a section of the residents to the missionaries
and the effects of the increasing power of tee colonists in
the Cape government begin to make themselves felt. Into
this period also falls the visitation of Genadendal by Bishop
Breutel, who arrived in 1853. In 1858 Genadendal was
granted a legal title recognising it as a 'grant station'
held in trust for the Coloured inhabitants by the
Superintendent.

Fourth Period.

With the succession in 1861 of Brother F. * Kühn as Super-
intendent, Genadendal was fairly set on the road towards
independence from the omission Directory in Europe.

17) deport from tile Select Committee on Aboriginese (British Settlement) together with Minutes of Evidence. (hallbeck)1836. exs. Aces. Hallbeck, 9th Jul., 1834.

24) ibid., CVLili 1861: B. Marx, G., 13th Jun., 1861.
Men Kühn departed for Europe in 1865 to take up an appointment on the mission Board, Bechler succeeded him as Superintendent. He continued the policy already commenced in the previous period and which Kühn had accentuated in the foundation of Berea, viz., that of decentralisation. The work at the outstations of Twistwyk, Greyton and Kopjes Kasteel now became even more important. Towards the end of this period the missionary policy had to adapt itself to the emergence of an industrial migratory labour force. The missionaries followed the workers from Genadendal into Cape Town and up and down the railway lines. With a supreme effort the congregation was able to find the funds necessary to erect a new jubilee Church, inaugurated by Bishop Buchner during his visitation in March, 1893. The economy of the community at Genadendal was very precarious in the last decades of the century and the missionaries were desperately trying to find new 'industries' for the community. The division of the South African mission field into two separate provinces paved the way towards the independence of the Moravian Church in the Western Cape.

This brief historical summary will now be supplemented by a survey of the Moravian methods and the results they achieved.

The aim of the missionaries at Genadendal was to Christianise the Hottentots and this implied civilising them as well, for - in their opinion - the converts had to be gathered together in a community to receive effective religious instruction. Within a Christian community only was it possible to create the most propitious conditions for their wards to experience a truly personal and individual relation to their Saviour. The methods the Brethren used to achieve this can be grouped under three major heads, the religious care for the individual, the inculcation of Christian principles upon the community, and the actual preaching of the gospel to the inhabitants as a group. After an exposition of these measures the various obstacles hampering

30) L.R. Schmidt, Die Broederkerk, p. 11-12.
31) Select Committee Aboriginese, Evidence, hallbeck, 1836.
their effectiveness and the factors facilitating the Christianisation of the detribalised Hottentots will be described. Perhaps the most conspicuous element in the work of these devoted Brethren is the conscientious care they lavished on the individual convert. They have been criticised for this and it is said on account of this that their converts lack strength of character.\textsuperscript{32) As soon an the individual joined the community he was immediately put into his station in the hierarchy of church privilege. The lowest rank was occupied by the 'Dew People or \textsuperscript{33) They comprised people who had been permitted to reside in the institution but were not yet converted. They were visited individually by the missionaries. As soon as the missionaries were of the opinion that they sincerely wished to embrace the Christian faith, they were considered as candidates for baptism.\textsuperscript{34) During this period they underwent special instruction and their motives were continually investigated by means of the so called 'speakings'.\textsuperscript{35) Great caution was exercised in selecting candidates for baptism, as the aim of the missionaries was to gain sincere converts. Thus by January, 1799 the missionaries had only baptised 114 adults and 85 children, out of a population of nearly 800.\textsuperscript{36) After the missionaries had satisfied themselves that the candidate truly merited baptism, the test of determining by means of drawing lots, whether Christ approved of the baptism, was carried out. This method was used to determine advancements in church privilege in the beginning.\textsuperscript{37) General Synod of 1818 no longer considered the drawing of lots to be essential for important decisions. Children of baptized parents received a different treatment. The Brethren were not opposed to infant baptism. But since Christian children were considered unable to benefit by religious instruction, they received the necessary instruction later.\textsuperscript{39) When the Brethren considered the baptized to be ripe for a

further advancement in church privilege, he was admitted to the class of the Candidates for Communion. Here again he received special instruction. There were speakings with him which the missionary and his wife, who reviewed the candidates spiritual life with him reported to the conference of missionaries. When the candidate was considered sufficiently advanced in his experience of the Saviour, he was permitted to partake of the Holy Communion. After the converts had reached this final stage they were by no means exonerated from the strict supervision of their thought and actions. They were still expected to attend the 'speakings.' The main criterion for the advancement from one rank to another was not the knowledge of Christian principles or some other external attributes, but the sincerity of the individual's faith, there are instances of persons permitted to attend Communion although unable to speak Dutch.

The missionaries were always prepared to give individual advice on spiritual matters and the converts with problems were expected to interview them and they did so. The first three Missionaries were overwhelmed with such visits as all, who attended the services, felt that they had to see the missionaries individually after each service, but this was stopped in 1795. Regular meetings with the various classes were, however, organised in which the emphasis was on conversations between the missionaries and the individual convert, known as 'Speakings.' Such meetings were even organised for the members of the congregation who had been deprived of their church privileges but were still living in the institution. Besides 'class speakings' there were fairly frequently so called 'general speakings' when every member of the congregation was spoken to individually.

G. Latrobe, p. 100ff.
individually. In the beginning it was possible to reach every member of the congregation in this manner but in 1857 only about a thousand attended. The 'speaking' classes were divided according to sex, the Brethren speaking to the men and the Sisters to the women. When Sister Kohrhammer arrived in Lay, 1798, she immediately took up the duty of speaking to the women of the congregation individually. The missionaries visited members of the congregation, especially when these requested it. They were thus often present at the death of members of the congregation.

As the number of inhabitants increased it was found necessary to adapt this system, although the principle of strict individual care was maintained. In 1658 the community was divided into a number of sections and a Brother and his wife were made responsible for each section. By this method more frequent visits to individuals in their homes could be made. In December 1666 this system was further improved upon. Genadendal was divided into five districts. to the duties of a Brother and his wife in charge of a district, which so far had been restricted to visiting and comforting the sick was now added the responsibility for conducting the 'general speaking' as well as the class 'speakings'. The reform increased the amount of individual attention received by (teen member of the congregation.

In the individual care of souls the missionaries to some extent made use of assistants from among the inhabitants who were called chapel-servants. They had the duty of admonishing individuals and reproving them for blameworthy conduct. They also had to visit the sick. Hallbeck considered these untrained assistants of no great value. In spite of Hallbeck's opinion untrained assistants continued to be employed. In 1680 women Bible readers were appointed with the special duty of taking the fiord of God to the sick and aged. They were further expected to visit people who had left off attending the services. The missionaries, however, had no

49 Nchr. 6.-1858: Jan. - Okt., 1857.
54) Hiri. 2. Accs. Hallbeek, G., 10th Jan., 1834; Appendix A, Ill, 12.
greet faith in the success of this measure. Another instance of untrained assistance was of more promise. Between 1843 and 1694, Stephan Prins, a chapel-servant, journeyed up and down along the new railway line between Worcester and Kimberly, to care for the souls of the Genadendalers who had found work there. Arch Absalom volunteered to continue the work after his death.

The Brethren realised that it would be necessary to teach the Hottentots and Coloureds to run their community on Christian lines, if their painstaking work with individuals was to have any lasting effect. For this reason the congregation was divided according to the station of the various individuals into groups or 'choirs' of children, young men, young women, married people, widows and widowers. Separate meetings were held with 'leese groups and the general speakings' were based on these divisions. In the meetings the missionaries instructed the various groups in the principles according to which the should lead their lives in a Christian family and in a Christian community. Parents and guardians of children for instance, were admonished when they had not fulfilled the obligations towards their dependents. Special care was taken in exhorting the single women as they were considered to be particularly liable to temptation. These choirs held group festivals, every year. The accounts mention the children's festival fairly frequently. Before each festival there was usually a 'speaking'. They could be postponed or cancelled as punishment of a certain group. They served as an inducement for children to come to school as only those were permitted to take part who had attended school. The men were sometimes persuaded to perform work for the congregation after such a festival.

62) ibid., 5. 1640: her. G., 1838.
64) ibid., 1. 1823: Ber. G., Apr. - Spt., 1821.
A further method of inducing the community to live according to Christian principles was the formation, in the middle of the Nineteenth Century, of societies such as the Missionary Association, Bible Associations, and Young Men's and Women's Associations. The Missionary Association tried to induce its members to support missionary work outside Genadendal with both prayers and pence. The Young Men's and Women's Associations were formed with the aim of strengthening the Christian character of their members and of imparting useful knowledge. Their subscriptions were to be used for the purchase of books and the support of the sick and needy. All associations were accepted with a certain amount of enthusiasm at first, but interest in them soon waned. For instance, the membership of the Missionary Society, dropped from 332 in 1845 to 263 in 1848 because their subscriptions were not paid. In 1666, when it is mentioned for the last time its membership was 37. The Young men's and Women's Associations had, like the Missionary Association, a subscription of three pence per month. They are mentioned in the accounts only once, at their inception; hence they cannot have existed for long and had to be re-established in the twentieth Century.

The associations were an attempt to enrich the Christian life of the Inhabitants of Genadendal. Two reasons may be suggested for their failure. They were thrust upon the members by the missionaries, not spontaneously developed; and the spiritual life of the community seems not to have been developed enough to ensure their survival. Here are two associations, however, which still exist, the two burial societies. They were formed in the last decade of the Nineteenth century and the first decade of the Twentieth Century.

In 1802 the congregation was asked to contribute a certain amount towards some articles needed for the proper performance of divine service. The first subscriptions were at the rate of one shilling per person per annum. At first the members of the congregation were so eager to pay that a

shilling had to be liven to the needy out of the poor box so that they too were able to pay their contribution. The missionaries observed that:

"support a common interest, which surely all must feel, in providing the means of meeting together to worship God in fellowship.""

14 these means the missionaries attempted to make the congregation realise that it was a unit and had a corporate responsibility.

also ensured Lust members came to feel a responsibility for the church building, the centre of corporate life of the congregation. He need for a church was felt very soon but only after the Cape was occupied by the British in 1795 could a chapel and later a fairly large church be erected. The church, as all the buildings on the 'werft', was erected with the help of the Hottentots and was completed and consecrated in January, 1800. It is described by a visitor in the following words:

"...die Kirche, ein einfaches, missives Viereck von etwa 100 Fuss inn' adrat, an weichen dochlich Dach nicht gefallen, wo- durch man dem Gebäude eine austandige hÖhe hat geben wollen. Innen stehen zwei -eihen Menke and ein einfacher Predigtstuhl. kilos so wie die wande, die Pfeiler, Thüren und die Emporkirche von der grössten Einfachheit, aber derb, in guten Verhältnissen und reinlich gearbeitet. Das Ge- baik ist alles von Gelbholz, dessen angenetzte Far- be und Politurdem Gebäude ein Behâr sauberes Ansehen giebt...

It as designed to seat over a thousand people but on certain occasions it proved too small for too thong of worshippers. After having been used for almost a century it had to be replaced. In 1853 the congregation commenced collecting
money for a new church.\textsuperscript{77}) With the help of friends from overseas the sum of £3100 was raised by 1893, of which the congregation itself had collected £1225. It also net the debt of A.:338 which remained after the church had been built. Brother Hettasch was both architect and supervisor of the building operations. \textit{He} worked with the help of two Genadendal\textsuperscript{-}carpenters, a German mason, a German ship’s carpenter, and about 40 \textit{laborers} from the villa who came every day. The church which seats 1400 people was inaugurated by visiting Bishop Buchner on the 15th, March, 1693.\textsuperscript{78})

Frequent services conducted within the church, were based on those traditional in the congregations of the United Brethren. In March, 1793, the first instructions in the scriptures were inaugurated commencing one hour before sunset.\textsuperscript{79}) Any more were added on until in 1892, there was a service practically every evening of the week.

The order of services was as follows: On Tuesday evening Old Testament exposition, on Wednesday a singing meeting, on Thursday a service for the native assistants, both male and female, ... On Friday evening there was exposition of the New Testament, and on Saturday another singing meeting, at which the naive teacher \textit{hear} presided and offered an edifying prayer.\textsuperscript{80})

In 1860 a morning prayer was introduced. It was very well attended even in unpleasant weather. \textit{Men} and women sat in separate sections of the church during all services.\textsuperscript{81})

The most important day for religious services though, was of course 'Sunday. In 1832 they were livened up by an organ presented by a lady in France, who had visited Genendal.\textsuperscript{82}) \textit{He} Sunday services were described by a visitor in the early Sixties in the following way:

"I found the religious services very, edifying. In the forenoon, after the instruction for the candidates for baptism, the church litany was prayed in the course of which certain passages were sung, the organ being played by a pupil of the training-School. \textit{The} congregation then dispersed for a short tie, and afterwards reassembled for the sermon,

which I had been requested to deliver. ... In the afternoon, two adults were baptized. One of the missionaries delivered a suitable address, after which the Litany appointed for such occasions was read and sure. At the evening were arranged amendments to the central service which con formed the sermon:

'The Predigt' was delivered after more singing, by a missionary cabinet-maker, in Dutch, very ranting, and not very wise: the congregation was singularly decorous and attentive, but did not seem at all excited or impressed... The service lasted three-quarters of an hour, including a short prayer and two hymns.

On the Treat festivals of the Church the special litanies of the United Brethren were performed by the congregation, for instance, the famous Easter Litany sung before sunrise on the burial ground. SG In a similar solemn manner were celebrated the awakening of the little girls at Herrnhut in 1727, and the Mission Festival.

The first native assistant to officiate at a service was Ezechiel Pfeiffer who in 1851 held the evening service. The congregation was very impressed.

There were two main motives for extending missionary activity to outstations beyond the confines of Genadendal. The first was that the missionaries increasingly felt that there existed a need for serving the surrounding country. The second reason was that the missionaries feared that the numerous labourers outside Genadendal would decline in spiritual matters if they lost contact with the congregation. Bishop Hallbeck was the first missionary to conceive the idea of serving the labourers on neighbouring farms whose owners allowed the Brethren to hold services there. In Lay, 1839 Hallbeck preached for the first time on the farm atjesgat. Its owner, a Mr. Grönewald, was a sincere Christian and a great friend of the Brethren.

89 P. Aces. CCXI 1851: D.W. Suhl, G., 12th Feb., 1851. One of the Overseers, John Ruyter said: "The word of our late Brother Hallbeek has now become true, that we should one day be reproved by teachers of our own nation."
90 P. Aces. 5. 1841: Der. G., 1839.
was founded at Kopjes asteel, where a chapel, was completed in 1841. The most important of this type of outstation was Twistwyk, the farm of Commandant Linde. A chapel was inaugurated there in July, 1653. The work at these places was liable to be interrupted when a farm changed hands.

From 1803 when kohrhammer and his wife, at the re vest of Governor Janssens, proceeded to the camp for hottertot soldiers at Wynburg among whom were many from Genadendal, the Brethren took it upon themselves to follow members wherever they were driven by economic necessity. Hen coloureds were no longer employed as soldiers members used to leave the institution during harvest time and in famine years. They dispersed over such a large area that it was difficult for the missionaries to work among tees effectively. When, rail and road construction commenced in the last three decades of the nineteenth century and towns and mines began to exercise their pull on the floating labour force at Genadendal, the missionaries round it easier to follow them as they were concentrated on the railway lines and urban areas. The first step in this branch of missionary work was made in the pastoral tours of the chapel-servant, Stephan Prins, mentioned above. The missionaries chose a Coloured man because it was cheaper for him to travel and he could devote move time to ;se work. but they themselves wee not averse to do this exacting work. Brother Hettasch for instance, undertook similar tours and travelled as far as Kimberley. A further step in t is direction was the establishment of the church in Cape Town mainly for inhabitants of Genadendal who had found work tire. he station known as Beet, had a special status. it was situated on Genadendal land and had a resident missionary. The founding of Bera was due to the conestion at Genadendal. in 1864, the Brethren realised that a systematic settlement

in the neighbouring valley, settled against their will at first, it relieve to overcrowding. A house and a chapel were erected at Berea and a missionary was posted there. \(^{98}\) In October, 1855 the chapel was consecrated by the first missionary Brother B. liar'. \(^{99}\) The visiting Brother Buchner did not think that Berea merited the full time attention of a healthy man. In consequence the resident missionary often held an additional office. \(^{100}\)

On outstations the method of instructing the members and the care of the community was identical with that in Genadendal, although on a smaller scale. \(^{101}\) 'Speaking' were held at all outstations. As soon as possible naive school teachers from the raining School were posted to them. They usually did a certain amount of religious work. \(^{12}\)

A number of factors hampered the application of these methods. These factors derived mainly from the mentality of the Hottentots. Idle problem of language, one of the difficulties in missionary work generally, was not important. Lost of the Hottentots had learned to speak some Dutch when the missionaries arrived. \(^{103}\) In the beginning there were only a few people who did not know Dutch, \(^{104}\) besides some members of the Bent tribes. \(^{105}\) More serious as than the language problem was the character development of some Hottentots under European contact. Soon the missionaries noticed that some of them, ... having been some time among the white people, have learnt to talk religiously but are not always to be trusted

He missionaries found it hard in such cases to determine whether the motives for conversion were genuine. \(^{106}\) Even hallbeck, who was very sympathetic towards the Hottentots, \(^{107}\) criticises them for their lack of energy of mind, inability

to persevere awl their lack of independence of character. But he adds:

...in all probability a great variety of unfavourable circumstances have combined to produce this evil, and that for this very reason the cure is one of considerable difficulty."

the missionaries fully realised that they had come to a socially backward people, whose faults were a result of the conditions they lived in. the missionaries also found that harvest workers were prone to "fall into sin, one reason being that the labourers were temporarily released from the supervision at Genadendal."

Certain factors, however, facilitated work among the Hottentots and partially explain their success of the Brethren. any of the Hottentots told the missionaries that they had heard about Christianity from their European Masters. The Brethren thus occasionally built on foundations laid by others. In addition, no resistance was offered to Christian teaching by the traditional religion of the Hottentots. It had lost its hold on them and their tribal system had broken down. The captains, who played a certain role in early Genadendal society were probably only 'kraal' headmen. They were also susceptible to the highly emotional appeal of the teachings of the first three Brethren. Not only the first journals, but neutral observers like Barrow mention the flowing of tears in the congregation."

The system of church discipline in Genadendal played an important part in the methods of the Brethren. To understand it a short account of the structure of the congregation is indicated. The affairs of the congregation were controlled by the missionaries and a Kerkraad, whose members were called chapel-servants. it was primarily concerned with administration of spiritual matters, and the care of church property such as the poor money. But they had also

110) e.g. P. Aces. Diary G., Jan. - Spt., 1809.
113) Appendix A, III, 3, 4, 9, 12.
secular duties which resembled those of the 'opsieners' (overseers) who formed part of the civic administration of the community. In practice there was therefore an overlap of functions and because of this, chapel-servants and 'opsieners' had common meetings.

In 1827 the Kerkraad consisted of fourteen chapel-servants later increased to eighteen. In fact the missionaries retained most of the spirituel and secular power, and were always in a position to exert pressure on individual members of the kerkraad. The missionaries, who met every day at table, discussed matters pertaining to the congregation. They were the final authority enforcing church disciplin. Moreover, the missionaries appointed the members of the Kerkraad and had power to dismiss them for scandalous conduct which involved their expulsion from the congregation.

The post of chapel-servant was not exclusively held by men and in the very earliest journals female chapel-servants are mentioned. The chapel-servants were always communicants and were the most fervent Christians in the judgement of the Brethren. The duties of the chapel-servants can be divided into those concerning the spiritual life of the congregation and the church property and their duties as 'opsieners'. Here, only the former will be discussed. The first chapel-servants were appointed to assist the missionaries in minor duties such as keeping order during services, providing for lighting up the church at evening services and similar responsibilities. Later their duties became more numerous. They took part in the comforting of the sick and other pastoral duties, as we have already seen. Satrobe's impression was that the chapel-servants of both sexes served in the true Christian manner.

123 r. Aces, Diary G., Riau. - Spt., 1809; Appendix A, III, 12.
At the beginning of the year the missionaries had conferences with the kerkraad to remind them of their duties. These conferences were originally only held to inform the kerkraad of important matters, changes or improvements. The annual meetings were started by the chapel-servant themselves in 1809.

"Our chapel-servants assembled of their own accord in the avenue leading to the burying ground, to speak with each other about the occurrences of the past year, as related to their spiritual course. He men sat down on one, and the women on the other side. They began, concluded their conversation with a hymn."  

By 1813 they had developed into regular meetings with the missionaries. By 1813 they had developed into regular meetings with the missionaries.  

After the introduction of the office of 'opzieners' the meetings became more frequent. "Um diese Zeit zeigten uns die Aufseher und Saaldiener den Wunsch, dass ihnen Gelegenheit möchte gegeben werden, um fiber die znancherley Vorkoiwnheiten in der Gemeine, die auf ihr Ant and ihren Auftra Bezug habea, mit einander sprechen zu Können." 

In 1826 it was therefore decided to have a meeting every month with both the 'opzieners' and the kerkraad. 

It is laid down in the Rules and Regulations that the church discipline was to be administered by the missionaries alone. It is difficult to distinguish between pure church discipline and the discipline of the settlement, although the government attempted to draw a distinction in 1853. The actual punishment consisted of a reprimand either given privately or before the assembled missionaries, exclusion from church privileges before the missionaries or before the assembled congregation and finally expulsion from the station.

These measures were mainly employed in order to combat vice and immorality. Occasionally, however, they were employed to inculcate the true principles of Christian doctrine. Once a communicant was excluded from the

127) ibid., LXIX.: Diary Go, Jan. - Apr. 1813.  
128) Fehr, 2. 1528: Ber. G., 1528. March, 1626. (During this time, the overseers expressed their wish that an opportunity be given them to meet occasionally, to discuss the events in the community related to their mission and their **tee* office.)

Lord's Supper because of her inveterate hatred of another person. She concurred with the judgement of the missionaries as she felt that, though she had forgiven her enemy she as yee did not love her. 132) A person wao had been excluded or even expelled from Gnadendal could always be rehabilitated if he proved by his conduct that he as worthy of consideration, showed sincere repentance and confessed his faults. 133) Members under discipline, unless expelled, were still cared for by the missionaries who had meetings with them. 154) Exclusion was surprisingly effective. Backhouse and hallbeck record that the individuals concerned were deeply affected. 135) On the whole, however, persuasion was the most important means of maintaining order in the congregation. Lichtenstein is correct in saying:

"Bs is wirklich zum erstaunen, dass dies alias ohne Zwangsnfttel durch blöse ermahnung hat bewirkstelligt werden können. Sie kennen durcnaus keine andre Strafe, als Ausschliesung von den Gottesdienst und Verbannung aus der Gemeinde, und such dazu schreiten sie selten und nur, wenn ein ganz verderbtes Subjekt wiederholten Ermahnungen kein Gehör geben will. 136)"

Besides these individual punishments there were cases where the missionaries inflicted joint punishment on Groups. They might postpone the holding of Communion, 137) or cancel the celebration of the festivals of the single Brethren and Sisters. 138) In 1798 the missionaries even threatened to leave the Hottentots altogether if they did not improve their behaviour. 139)

results the three original missionaries achieved were surprising. They themselves were elated at the eager-

137) n. Lichtenstein, Vol. I. p. 251. (It is really surprisine, that all this was achieved without coercion, by simple admonition. The positively know no other form of punishment except exclusion from the services and expulsion from the congregation, but tee are seldom used, only when a completely depraved person takes no notice of repeated warnings.)
cress with which Hottentots flocked to Baviaanskloof. A Cape Town friend wrote on the 25th January, 1795, that he counted 15e hearers at every meeting he attended. In 1801 the missionaries reported that the people were eager to be baptized or admitted to lioly Communion, and that those not promoted in church privilege used to shed tears. Thus after only six years of work ther=e were an estimated 705 people on the station.

she number in the congregation increaces steadily till about 1860, when there were just 200 below the 3,0u0 mark. An exception to this steady increase came between 1822 and 1826 when Genadendal underwent severe hardships due to bad harvests and a general economic depression in the Cape. The number of communicants showed a similar steady increase, again with the exception of the years 1622–26. In 1861 it reached its peak with over a thousand communicants.

414e rate of increase it should be noted was not uniform. it accelerated after 1638 when the emancipated slaves joined the settlement. The group most affected by the emancipation of the slaves was the baptism class, welch in 1835 comprised 52 candidates, whereas in 1539 it had increased to three Limes that number.

of ter 1860, however, there was a steady decrease. she congregation was reduced to 1,875 souls thirteen years later. After 1673 there was again a rise until in 1668 tee figure too thousand was topped. The class of candidates for baptism correspondingly dropped to 39 in 1873, but rose to 138 in 1888, in spite of the fact that Genadendal was then no lönger an important missionary centre.

attendance at the services in proportion to the number of the congregation was greater in the early part of the century than later. In an evening service, attended by Latrobe, 400 attended. hallbeck estimated that three quarters of those at home and not hindered by sickness or...
other impediments attended daily either school or at church\textsuperscript{145} to attendance of adults at week day services declined after 1860 and in 1878 only 101 adults were present at the 'general speaking.' Attendance improved after 1873 again.\textsuperscript{147} Attendance at Sunday services did not fluctuate as much; it was good throughout the century.\textsuperscript{148} The attendance at the &med services, however, was considerably influenced by the agricultural seasons and the nature and time of the harvest. It was small in the bad harvest years of 1822 and 1823. When the harvest was later than usual mile Christmas services were poorly attended, but the New Lear services were generally well attended. Although a capacious Church had been erected in 1800, the number of worshippers often necessitated separate services elsewhere from 1846 onwards.\textsuperscript{150} By 1880 the church no longer satisfied their requirements. This development is the more striking as an increasing number of inhabitants were finding 'lark outside Genadendal for lengthy periods.\textsuperscript{152} The women were far more susceptible to the teachings of the missionaries than the men. One reason for this was, as the missionaries realised themselves, that the men left the set, lament in order to work.\textsuperscript{153} Moreover, in 1807 the missionaries report:

\begin{quote}
"As for the women, there is a more general desire prevailing to grow in the knowledge and grace of our Saviour."
\end{quote}

In 1880 the proportion of women to men in the class of the communicants was three to one, although the number of men was equal to the number of women.\textsuperscript{155}

of the visitors to Genadendal were impressed by the attentiveness of the Hottentots and their singing at the

services. Lady Anne Barnard describes their interest and their singing in the following words:

"The service began after the Presbyterian form with a psalm. Then indeed the note that raised itself to heaven was an affecting one; about one hundred and fifty Hottentots joined in the twenty-third psalm in a tone so sweet, so loud, but so just and true that it was impossible to hear it without, being surprised. ...Not a Hottentots did I see in this congregation that had a bad passion in the countenance; watched them closely - all was sweetness and attention; I was even surprised to observe so few vacant' eyes, and so little curiosity directed to ourselves;..."

In the middle of the nineteenth Century the tone of the services was not quite so ardent. Lady Duff Gordon, writing in 1862, states that "...the congregation were singularly decorous and attentive, but did not seem at all excited or impressed..."

She too was impressed by the singing, and states that the six-hundred people present at the morel service...made music more beautiful than any chorus-singing I ever heard."

And Brother Buchner adds:-

"On both Sundays attendance at the services was excellent, and the singing splendid, for the people are thoroughly musical and have beautiful voices. A native always presides at the cabinet organ and plays without notes..."

Fervour of Christian belief manifested itself occasionally in what was called 'a religious regeneration', usually of short duration. Sometimes there were spiritual stirrings in one congregation, from which would emanate prayer unions, and spontaneous singing.

She tenor of confession made by converts to the Brethren, shoes that many sincerely believed that they had experienced the living Christ.
on their death beds.\(^{154}\) The Brethren admit, however, that a number of their wards were converted genuinely only in the face of death.\(^{155}\) Hallbeck, writing in 1821 states:

"...that most of the Baptized and Communicants, when tried by affliction, are pattern of Lord."\(^{156}\)

Brother Buchner towards the end of the Nineteenth Century reports:

"...what struck me very forcibly, was that when we made visits in the village, all people and especially the women, at once begat spiritual conversation. The people are deeply interested in spiritual things; they have a good degree of religious knowledge, and feel deeply on such matters. They manifest an uncommonly childlike confidence in the religious sphere, and a quick perception of the grace of our Saviour."\(^{157}\)

The Brethren were sober minded enough to realize shortcomings in their charges. They complained of occasional hypocrisy. Such complaints increased after 1850.\(^{158}\) Visitation clergyman refer to the formally of the congregation at Genadendal.\(^{159}\) Buchner, in the context of the statement just quoted, points out that spiritual interest was not infrequently superficial.\(^{160}\)

If these were the results of missionary labour it be to examine more closely the character of the men and women by whom these were achieved, in general the missionaries of the Unified Brethren were German; however, except one such as the eldest of the first three missionaries, endrik Marsveld, a Holander\(^{161}\) and the beloved Bishop Hallbeck, who was a Swede by birth.\(^{162}\)

Emphasis was laid on the practical training of these men. Thus Künne1, manufactured the famous Genadendal knives,\(^{163}\)

beinbrecht supervised the erection of the bridge over the Sonderend, and was an expert on rills and steamengines. The theologians too, were simple, diligent men. Hallbeck was described as a plain, simple-hearted Christian, who visited the sick, and took his turn in the school instructions of ten Hottentot youths...

According to Schneider, Schwinn's wife was unable to sign her name on her passport, the only case of illiteracy known. From 1848 to 1869 a medical missionary Brother Roser, was stationed at Genadendal. He was a fully qualified doctor. After Roser had, left a missionary who had taken a short course in medicine was responsible for the health of the community. It was the policy of the Mission Board to have a man capable of caring for the health of the community.

Missionary family life was very much the same as they should marry. His practice was kept up until as late as 1802. "Ay friend the storekeeper married without Navin ever beheld his wife before they met at the altar, and came on board ship at once with her. He said it was as good a way of marrying as any other, and that they were happy there together."

Children of such unions, were educated for the first few years in one infant school at Genadendal. After that they were sent to Europe where maw/ were trained as missionaries. Missionaries met at meal time and talked over the affairs of the day. The description of these common tales, as given by Latrobe in the beginning of the century resembles the accounts from the middle and end of it.

J. Murray says in 1863:

184) Latrobe, D. 92-93.
About eight of thee reside here with their families, and have in several respects a combined house-keeping. ...they assemble L. ticle a day at a common table in a large test plain dining-roots, on the walls of which hang portraits of Zinzendorf, Schmidt, and other members of the Brethren's Church...

Jacob gives the following description in 1896:

"There are at present sever missionaries now residing at this station, all married... Each life: but for the two most important semis of the day - dinner at 12 and supper at 6:50 - all meet in the large dining-hall, here they also resemble at 2 o'clock for coffee, when they have a short respite in their busy life and the opportunity for social intercourse..."

The work of the missionaries was divided in the following manner:

of preaching the gospel, the care of souls, and school-teaching. Besides this, each takes his part in the secular labour by which the expenses of the mission are net. There is a corn-mill which still bring in a little also a smithy, a carpenter shop a drugstore, L printing-office.

years later, conditions had not changed:

"In addition to the direct spiritual portion of the work and the charge of his own district, each of the brethren is responsible for some special department which meets the needs of the colony - the general store, the mill, the printing-office, the gardens, &c., and the sisters, in addition to the ties of household and family, have each their special ministry Jr. the community."

All thee missionaries were very much attached to their home congregations in Europe. Great events in their lives were Brethren passing through and the European post.

The attitude of these missionaries towards the Rotten-tots and the Coloureds was not over-idealistic. they were rear to admit that the Hottentots had faults but the believed that they were not inherent faults. When they were asked to give their opinion on measurer restricting the freedom of the Hottentots, they opposed them frankly. But with wise restraints they did not give violent expression to their faults.

Hallbeck, for instance, objected to the vagrancy law of 1834 when civil Commissioner asked him for his opinion. He argued that it not only harmed the Hottentots, but by restricting their movement it caused the farmers inconvenience. Hallbeck believed that the law was unnecessary, especially if the policing of towns was improved and the control of wine trade made more strict. Hallbeck was convinced that the Hottentots were capable of improvement. "Then they had completed the bridge over the Sondereend. He was overjoyed.

"The people have on this occasion, shewn a willingness and perseverance, unprecedented in the history of the Hottentots. The building of a bridge, particularly as a private undertaking, and the undertaking of the Hottentots, is such as is talked of with astonishment from Cape Town to Grahamstown; and will, I trust, silence those who accuse the Hottentots of incorrigible sloth and stupidity." Hallbeck was also of the opinion that the school-children at Genadendal had the same ability as those in an English school.

"I think the are just like children in every part of the world, as far as I can judge. There are some of very good capacity, some bad." Hallbeck, a contemporary of Dr. Hallbeck, was not alone in his championship of Coloureds. The missionaries at the end of the century were as sympathetic towards the Coloureds. In 1392 the characteristics of the position of the farmers who despise the Coloureds and predict tension between the lower and upper classes within the Cape Colony as they were then developing in Europe.

she close relations let her en the missionaries and their spiritual charges led to a certain amount of social intercourse. Coloureds served as servants in the European families. Moreover, when the missionaries fell ill the Hottentot midwives would take care of the European child. Hallbeck and his wife were prepared to adopt Coloureds.

198) CO 102 Answers to Queries Hallbeck, 11th Dec., 1819.
The Development of the Administration of the Genadendal Community

The missionaries were not only in charge of spiritual matters. Until 1816 they were the only secular authorities. To understand what the missionaries had to cope with in this respect, one must be acquainted with the number of inhabitants in Genadendal. An early estimate of the total number was given in the year 1798. The missionaries reckoned that there were about 700 people 'under instruction.' Possibly this is an underestimate, because in 1799 in an official report on the numbers at Genadendal they state that there are 252 men, 521 women, and 661 children, i.e., 1234 souls are listed. After 1803 a decrease set in, because a hundred men were recruited for the Cape Regiment. In 1807 only 747 persons lived at Genadendal. From 1807 onwards, there was a steady increase to the highest total number which was reached in 1860. There were two fluctuations in this population trend. The bad harvests between 1822 and 1826 retarded the increase. The influx of the slaves after 1836 accelerated it. In December 1838, 202 persons were permitted to live at Genadendal, and in 1839 a further 430 receive permission. In 1860 the number of inhabitants was 3,521, it was reduced to 2,496 in 1870. From then onwards, however, there was a gradual increase again until in the eighties the number remained static just slightly below three thousand. The figures given in the accounts are not quite accurate, for two reasons: firstly, members of the congregation who had left the station were only struck from the books after a number of years, and secondly, the missionaries probably often included the men who were working outside Genadendal. A census taken in April, 1825 during the ploughing season, for instance, shows only 922 people, whereas the total number at the end of 1824 had been 1,242. In 1875 only 2,344 inhabitants were actually counted to be

1) Appendix B for this discussion.

7) ibid., 1. 1828: Ber. G., 1325.
at Genadendal, but at the end of the year the number was given as 2,726.}

It is more difficult to gain an insight into the racial composition of the population. The basic stock was probably Hottentot, but with accretions from other races. Lichtenstein maintained that the baptised were all 'bastards'.

An early settler at Genadendal whose recollections were included in the accounts for 1851, claimed that her father was a European. Then Lady Duff Gordon visited the settlement in the 1860ies, she met the last 'pure' Hottentot who was estimated to be 107 years old.

Any persons who entered the station, and were referred to as 'Hottentots' by the missionaries were actually half-castes. There were a considerable number of Hottentot women who had illegitimate children by European fathers. Already in 1797 the missionaries complained about the immorality between the Genadendal girls and the dragoons who were posted at Zoetemelksvallei to protect the mission station.

In 1866 and 1870 the missionaries reported that irresponsible Europeans created disturbances in Genadendal by bringing wine into the village and having dances with inhabitants.

Two Europeans actually resided in the village and were members of the congregation, while a third lived with a Coloured girl in irregular marriage and caused the missionaries serious concern.

From 1809 onwards there was also a Bantu element in the population. These 'Caffres' had been ordered out of the Colony by the government. Those who were permitted to stay had to reside at a mission station. In 1810 one of the first caffre woven, the daughter of a 'captain' was baptized.
A few years later Latrobe visited the "Caffre-Kraal beyond Baviaans River" which was inhabited largely by converted Bantu. One of the baptized women tried to persuade him to establish a mission in 'Caffre-Land'.

The second largest racial group was formed by the descendants of the slaves. They were mostly of Bantu and Negroid descent. In 1848 the ratio of Hottentots to emancipated slave was estimated to be two to one.

A graphic description of the external appearance of the Coloured at Genadendal is given by Lady Duff Gordon in 1862:

"she Hottentots, as the are called - that is, those of mixed Dutch and Hottentot origin (correctly, 'bastaards') - have a sort of blackguard elegance in their gait and figure which is peculiar to them; a mixture of Negro or Mozambique blood alters it altogether. The girls have the elegance without the blackguard look; a 11 her slender, most are tall; all of these all have good hands and feet; some few are handsome in the face and many very interesting-looking. The complexion is a pale olive-yellow, and the hair more or less woolly, face flat and cheekbones high, eyes small and bright. These are far the most intelligent - equal, indeed, to whites. A mixture of black blood often gives real beauty, but takes off from the 'air', and generally from the talent; but then the blacks are so pleasant, and the Hottentots are taciturn and reserved. The old women of this breed are the &earliest hags ever saw; the are clean and well dressed, and tie up their old faces in white handkerchiefs like corpses, ... they are...

It was the general practice in all the settlements of the United Brethren to have a set of rules and regulations determining both the spiritual and temporal conduct of the community. The Genadendal code of rules is first mentioned in the accounts in 1803. Discharged Hottentot soldiers had to agree to it before they were permitted to reside in the village. In 1809 communicants were debarred from partaking of holy Communion when they transgressed the regulations relating to the purchase of alcohol by villag-
When Latrobe visited Genadendal he was requested to revise them in the light of comments received from the Missionaries and the rules in force in European settlements of the Unitas Fratrum.\(^2\)

these 'dodified' rules of 1816 formed the basis of the revised Rules and Regulations of 1827 which were the work of Hallbeck and the missionaries, with, the help of the 'opzieners' and chapel-servants. After they had been read out to and approved of by the assembled men of the settlement a Dutch and an English copy were sent to Governor Bourke, who strongly approved of them.\(^2\)

When in 1858 the Superintendent received the title which granted the Genadendal lands to him in trust for the Hottentots\(^2\) he also received new regulations revised by the government. These regulations of 1858 embodied three chapters of the revised Rules and regulations of 1827. A fourth chapter was added which provided firstly, that the civil administration of Genadendal should be strictly separated from the administration of the congregation, and secondly that the number of inhabitants should be limited to three thousand.\(^2\)

It was expressly stipulated in these Rules and Regulations of the Genadendal Institute that they did not supplant the laws of the Cape Colony. In the case of a crime against the laws of the Colony the culprit was to be handed over to the colonial authorities.

The first section - appearing in the 1827 document under the heading "Of Christian Doctrine, Fellowship and general moral and Social Duties" - deals with issues of dogma and Genadendal relations to other denominations. It is stated that the congregation at Genadendal feels itself a part of the church of the United Brethren, and that therefore, the Bible is the basis of teaching and conduct. Sunday should be kept as a day of rest and worship. Only teachers approved of by the director of the United Brethren could be accepted. As regards moral conduct the emphasis is laid

\(^{24}\) When Latrobe visited Genadendal he was requested to revise them in the light of comments received from the Missionaries and the rules in force in European settlements of the Unitas Fratrum.\(^2\)

53.

on strict honesty and on diligence. The members are reminded, however that the goods of this earth are transitory. In general a high standard of moral conduct was expected. Marriage is an institution ordained by Cod. e violation of the rules of Christian marriage Junes, be punished by exclusion from congregation and institution. it is laid down how Christians and heathen residents can be legally married. lastly, the duty of parents to provide their Children with a Christian education is enunciated.

The second section - headed in the original of 1827 of outward Order and regularity of the institution" - lays down that every inhabitant of Genadendal shall have a fixed place of abode, especially young unmarried persons. It stipulates that houses should be well built and kept in good repair. it gives a missionary the right of Inspection and builders are bound to obey his instructions when erecting new houses or altering old ones. 'Opzieners' are entrusted with the duty of allotting garden and arable land and are made responsible for seeing that such land is used properly. when it is not effectively cultivated it can be confiscated and given to more deserving persons. Disputes over gardens and arable land have to be brought before the 'inspector of gardens'. he conditions under which land in Genadendal was held by inhabitants is defined. She main condition being that such land is only held under the rules of the Institution and therefore, cannot be sold or bequethed to persons outside the settlement. She owner of a house and a garden was, however, entitled to sell or bequeath his property to another resident on condition that he gave due notice to the superintendent of the institution. .s the owner could forfeit his rights by prolonged absence, unless he delegated a tenable person to take care of his plot. Then folio regulations concerning stock and rules for the impounding of straying cattle. Such disputes as arise out of damage done by stock and over ownership of land should be brought in the first instance to the 'Opzieners' or missionaries, although nothing is in the way of taking complaints to a magistrates. So preserve public morality it was laid down that residents could not have strangers overnight unless permission had first been obtained from the missionaries or from certain 'opzieners'. Further, residents were expected to observe a curfew after the evening service. 'Young people were to be under supervision as much as possible; the.) were not allowed to participate in recreation likely to lead them into sin. Wine could be brought into the village in small
quantities and for immediate use only. It was prohibited to sell drink in the settlement. The residents were expected to hold themselves available for work necessary for the commonweal, such as repairing roads and the church, and to see that they kept the reads in front; of their lots in an orderly state and that the drinking water was not polluted. The community took care of the sick and infirm and, therefore, the inhabitants were enjoined not to forget the poor box. It was also defined how a person might enter the institution. A thorough inquiry into his previous life was made. if this was satisfactory and he was prepared to abide by the regulations, he was permitted to reside in the settlement on probation. Persons born in the village, had to promise to obey the rules when they were accepted into the congregation. Finally it was laid down, that any person who habitually violated these rules lost the right to reside in the settlement.

The aim of this section then, was to preserve a high standard of public morality and to outline ways of settling disputes peacefully.

The third section - which deals with "Sup¬rintendence of the Institution," - is of a different nature. It establishes the authoritative body which was charged with enforcing the rules, the 'Opziener konferensie.' The basis on which every individual was expected to comply with these rules was that they were agreed to by the residents and were not laws imposed by the Missionaries. it is difficult to say in how far this basic assumption was acted upon. In practice the residents in assembly agreed to the rules and regulations which had been drag up by the missionaries. what the latter insisted on was that the inhabitants knew the rules. 'Hew people' had to understand and agree to abide by the rules before they were admitted. Persons born in Ge¬nadendal were told what the rules of the community were when they were received into the congregation. Besides, the rules and Regulations were read to the assembled congregation at regular intervals.29 The final chapter aided in II..57 by the government aimed at separating the civil administration from that of the congregation and giving the government a greater sae in the application of the Rules and regulations. The reasons for this step were two. it was felt that a further increase in the

29 (30 611 Rules and Regulations of the Institution at Ge¬nadendal, Revised 1827. ..mark in the margin by Teutsch.)
population of Genadendal would be undesirable and that therefore, the government should be able to control it. Secondly, there had been complaints about the civil administration of Genadendal by some residents. The government wished to safeguard the civic right of the inhabitants. The right to vote in civic matters was defined in terms of property. The government reserved the right to amend the Rules and regulations on the application of the missionaries and four-fifths of the eligible voters. Finally, the right of every resident to take stock found on his land to the pound was reaffirmed.

Then the legality of the 1858 Rules and regulations were challenged soon afterwards they were held to be invalid in the supreme court on the grounds that they were not parliamentary laws. To place the administration of Genadendal on a legal basis it was found necessary to have a special mission station act. This act was passed in 1909 and was accepted in Genadendal only in 1926. The main reasons for, or perhaps the most important reason for the invalidity of the Rules and regulations was the fact that the land on which the institution stood had been granted in trust. It was not private property as for instance the Moravian station at Elim.

Residents of Genadendal participated in the administration of the village from the beginning. There are references to the employment of Hottentot 'captains' in the accounts before 1816. These captains were invested with some authority directly from government. The of them possessed a staff of authority. Lie early days captains were responsible for maintaining law and order at Genadendal. They assisted in the collection of taxes and in securing law and order.

The government was satisfied with this system of administration. Landdrost Rhyneveld, in 1802, praised the obedience of the Hottentots and pointed out that for a thousand people at Baviasnkloof no Justice of Peace was necessary, whereas ordinarily a Justice of Peace had enough to do among three hundred people. Later this rule by traditional tribal authorities was supplemented by that of the Kerkraad which acquired a number of temporal duties in addition to its church duties. But rivalry between various factions and clannish loyalties were not unknown among the leading residents at the time of Latrobe's visit and caused the missionaries a certain amount of trouble. Perhaps this was one of the reasons why it was decided to institute the office of 'opziener'. The main reason, however, was the fact that Genadendal had increased in size. It was no longer possible for the missionaries alone to keep a watchful eye over the community. When, therefore, the chapel-servants proposed in 1816, that a number of respected persons should be appointed to assist the missionaries, the proposal was adopted. In Lay, 1816 32 overseers met for the first time, with the approval of the Landdrost at Caledon. The 'opzieners' at first worked side by side with the 'captains', Koopman, who had been the captain in Latrobe's time, became chief overseer in the village and received a daily stipend of two shillings from the government, until his death in 1642. His duties as a chief are nowhere defined.

In the beginning the overseers were appointed by the missionaries. When the Mules and Regulations were revised in 1827 a system of election was included. The qualification for a voter was twofold: the possession of a house and garden and the status of a communicant. Only communicants with 'walled houses' could be elected as overseers. Overseers were not elected regularly but only when a post fell vacant.

Under the 1358 rules and regulations a further qualification was added viz., that only a person who owned a house and garden worth 45 could vote.  

Bode of overseers, consisting in 1827 of 18 members and in 1858 of 25 members, together with the chapel-servants, of whom there were 14 in 1827 and 18 in 1856, and the missionaries formed the 'Overseers Conference. It met at least once a month. It was the duty of the conference to settle disputes. The missionaries were looked upon as a kind of executive and, dealt with unimportant matters between meetings. Reports of actions taken had to be made to the conference, however, and important matters had, to be laid before it.

Duties of the overseers were those of maintaining order in the settlement. They were not entitled to make bye-laws for the settlement. They had powers to settle minor disputes. It was their special duty to see that strangers did not enter the settlement. Persons expelled from or permitted to enter Genadendal were informed of this decision in the presence of the 'opziens' and never without their knowledge.  

Monthly conference of the overseers was instituted in 1826 at the request of the chapel-servants and overseers themselves. In 1827 it was included in the Rules and Regulations. This body conducted the administration of Genadendal for a century.  

Overseers could only remain in office 'during good behaviour'. When, on account of irregularities, an overseer was publicly excluded from the congregation he was automatically dismissed from the Conference. He could be re-elected if he repented. As the missionaries decided who was to be excluded they exercised some control over the composition of the conference. The missionaries apparently never used this power inequitably.

There were two forms of punishment, exclusion from the

congregation and expulsion from the place. The Rules and regulations reserved to the missionaries the right to administer church discipline. exclusion was the most important means of maintaining discipline and public morality. It was remarkably effective, particularly until Hallbeck’s death, but even in 1857 Suhl comments on the respect shown for this form of correction. The names of those publicly excluded were read out to the congregation about eight times a year. The reasons for exclusion could be religious, but in most cases the reason was drunkenness or immorality.

The missionaries’ powers of expulsion were at first practically unlimited and the Veldcornets helped them to eject recalcitrants. When, in 1816, the ‘opzieners’ were appointed, they were immediately consulted as to the readmission of a repentant expellee. Against the expectations of the missionaries they advocated his readmission. The principle that the overseers conference should have advisory powers in matters of expulsion or admission was, therefore, already present in Latrobe’s time. If a person continually broke rules and if he seduced other residents to succumb to vice, he was expelled. Only 54 persons were expelled from the village during the first twenty-five years of its existence.

Towards the middle of the Nineteenth Century, however, these two forms of punishment grew less effective and more difficult to apply. The number of persons excluded from the
Some of the excluded became a centre of opposition to the missionaries. It had become difficult for the missionaries to expel troublemakers after the 1856 revision of the rules and regulations, as they made an expulsion order from a magistrate compulsory, but this power of the magistrate was not upheld in the Supreme Court which virtually made ejection impossible. In 1848 already, the relations of an expelled person often kept him at Genadendal, thus negating the effect of expulsion.

There were thus minority groups within the settlement, no opposed the accepted form of administration of the community. The main reasons for opposition to the missionaries were two. The less serious but widespread form of antagonism was the refusal of residents to pay the fees levied by the Overseers Conference, although these had been approved of in a public assembly. In 1848 the residents refuse to pay true fee for the herdboy. In 1878 the missionaries complained that the Genadendalers were unwilling to pay their school and congregation fees.

The more serious, though not so general, form of opposition was motivated by the desire for land and for security of tenure. The first manifestation of this was in 1850 when four Colours from Genadendal, who had been promised land as a reward for the services during the 1835 frontier wars, petitioned against an alleged encroachment by neighbouring farmers. The claim was pronounced unfounded by the civil Commissioner and Surveyor General, who had been sent to investigate. A letter from Teutsch, the Superintendent, shows that this petition was presented to the Governor against the sill of the missionaries. In 1858 some few residents

caused trouble by attempting to obtain the status of a municipality for Genadendal. He were allowed to call a meeting for the purpose of asserting the wishes of the inhabitants, but suffered an overwhelming defeat. This, if successful, would have been tantamount to terminating the civil authority of the missionaries. In 1863 a petition was signed even by some of the overseers and chapel-servants, although it had been expressly decided by the conference that they should not sign petitions to the government affecting the administration of the place. The cause for complain was the refusal of the missionaries to purchase a heavily mortgaged house for the congregation. As a result some of the chapel-servants and overseers were dismissed. The missionaries now felt that the reason for the growing opposition was the fact that they exercised supreme civil authority in the settlement and this was injurious to their spiritual work. After 1892 another incident occurred and the motive was again the desire for more land.

it is thus obvious that internal opposition was growing and that, although the missionaries were still capable of enforcing their authority, the legal weakness of the system should have been remedied long ago. This weakness lay in the fact that Genadendal was not the property of the mission of the Unitas Fratrum but a 'rant station' to be held in trust by the Superintendent of the mission in South Africa.
V.

Land Teneer and relations with the Government.

As Genadendal was a ‘grant station’ and had not been purchased by the mission the government could interfere more easily in its administration than in a station such as Slim that had been purchased by the mission. There were four other spheres of contact between the community and the government. Government supervised the administration of the place. It employed residents as soldiers and otherwise. It influenced the community by promoting and sometimes obstructing the work of the missionaries. The Coloured inhabitants pitted a part in the internal political development of the Colony.

The initial grant of Genadendal was made in a resolution of the Council of acting on orders from the Council of Seventeen. By the resolution of the 19th December, 1792, the missionaries were permitted to proceed to Baviaanskloof, to perform missionary work, to gather a congregation and to administer the Sacraments. The Landdrost of Stellenbosch was asked to inform his Veldcorments that the missionaries should enjoy their protection. Teunissen, the commander of the Company's post at Zoetemelksvallei, was to provide them with everything they needed. The missionaries would have preferred a more secure title, but when they applied for it to the government it was refused.

The British authorities during the first occupation were prepared to give the missionaries a greater security of tenure. The government was willing to investigate the situation. The disputed land was resurveyed and some of it was returned to the institution.

Under the rule of the Batavian Republic (1803-1816) no change of policy was recorded. Under the Second British Occupation difficulty arose about the erection of a church at Groenekloof on the grounds that the 'loan places' on which stations had been established did not belong to the missionaries. Latrobe then wrote to Bathurst, the Colonial Secretary, asking him to secure the land to the mission.

Lord Bathurst instructed Cradock in 1813 as follows:

"I am sure therefore that I am only anticipating your own wishes in conveying to you the Instructions of His majesty's Government to give every facility in our power to the fulfilment of Jr. Latrobe's request, and to secure to the establishment for the use of its congregations either by grant or otherwise as you may deem most advisable, both at Groenekloof and Gnadenthal, such portion of and as the establishment may appear to you to require."

The same time Bathurst informed Latrobe that formal grants of the land occupied by the missionaries would be made to "secure them from ejectment or disturbance in future."

Before Cradock had received these instructions, he already acceded to a request by the Moravians for a new 'loan place' at Genadendal as the Landdrost could find no suitable loan place, the neighbouring farmers were made to cede the necessary land to the institution. By way of compensation they received double the area of land they had ceded to the missionaries elsewhere. The thus enlarged area was resurveyed and the survey fee was paid by the missionaries. A diagram of the land thus set apart for the use of the Hottentots' was sent to the missionaries. Cradock did not grant a full title to the missionaries because he felt it would develop into a species of mortmain. This would have eliminated the possibility of residents appealing to the government.

in 1850 four dissatisfied Hottentots presented a petition to Sir Harry Smith including a plea for the granting of a regular title for the lands of Genadendal. The investigation which was set on foot then re-opened the question of the mission society's title to Genadendal. The official investigation viz., the Surveyor General and the civil commissioner at Caledon, recommended that the lands at Genadendal be granted on a nominal quitrent to the Superintendent of the mission in trust for the Hottentots. Missionaries were to remain in full possession of the buildings necessary for the running of the institution, and to retain the right to water and good and such other rights as they had hitherto possessed. The Commission envisaged the early granting of a municipality to Genadendal, when these rights of the missionaries were to be reserved. Both commissioners had been in favour of granting title deeds to the individual plot holders, but realised this to be impossible because of the confusion of rights to land at Genadendal.

Title was not granted to the oravians then but only after repeated appeals by the missionaries. The issue was complicated by the discovery of an error in the survey of 1815 which excluded most of the oldest buildings from the title-grant. Fortunately the Surveyor General did not object to including this in a correct survey. Title was eventually granted and received by the missionaries in 1858, on the conditions which had been envisaged in 1850. The size of the area granted was entered as 5598 morgen.

Simultaneously with the negotiations for the title to the Genadendal lands attempts were, as we have seen, made to introduce individual tenure. The 1850 commission found
that its introduction would have been very difficult. In 1854 a bill was introduced into parliament aimed at dividing the mission station lands into 'erven' to be given as freehold to the occupiers. She missionaries at nadendal drew up a petition which was supported by the majority of the inhabitants, who apparently realised the danger of such a development. In a letter to the select committee which considered the bill, kölbinger argued that the Coloureds would lose their lands if freehold titles were granted to them. The lands at Genadendal were not capable of carrying the population living at the station. The reason why the inhabitants could subsist was that they worked for the farmers during the busy seasons. If land tenure were not specially safeguarded the Coloured occupiers would lose their plots and be dispersed. The granting of the 'erven' in freehold would cause an influx of low class Europeans who would disrupt the morals of the Genadendal community. The existing racial feeling was not caused by the presence of institutions but by the fact that "As long as the coloured classes are treated with contempt because they are coloured, this feeling of races will not die away." A strong body of opinion outside Genadendal in favour of such a division of the lands until 1892 and later. It was Superintendent henning who then defended the 'clinging to the grants besides, there was a small party of residents in favour of individual title deeds.\footnote{In the beginning the colonial authorities expected the missionaries to police Genadendal, for instance, they were instructed to ascertain whether there were any Hottentot deserters at baviaanskloof.\footnote{The authorities...}}
were satisfied with their handling of problems of public order.\textsuperscript{34}) In cases when the missionaries were able to enforce the authority of the government, officials were despatched to their aid, for instance, when a person resisted expulsion from the village.\textsuperscript{35}) The British authorities tried to give the 'captains' at Genadendal some policing authority but apparently to little effect.\textsuperscript{36})

In consequence it was the missionaries with the help of the "pzeners" who apprehended suspected criminals. These were mainly stock thieves and runaway slaves,\textsuperscript{37}) but also more serious offenders.

Occasionally government officials enforced orders which applied to the settlement such as the order received by Teunissen to limit the number of Hottentots and cattle at Baviaanskloof.\textsuperscript{38}) Others commandeered residents to perform policing tasks, such as the recapture of runaway slaves.\textsuperscript{39}) In 1849, the government appointed a constable with powers to arrest offenders against the law. The first constable as overseer recommended by the missionaries, but after four months a white constable was appointed.\textsuperscript{40}) As the apprehension of criminals was now a responsibility of the civil authorities it is difficult to understand why farmers still accused the missionaries of being unco-operative in the tracking down of criminals.\textsuperscript{41})

There does not seem to have been very much work for the constable because he was later male postmaster as well.\textsuperscript{42}) In 1857 a monthly court to be held by the magistrate from Caledon was instituted, but this found so little work that
At this stage it seems necessary to review in detail the development of government policy towards Genadendal. The three first missionaries were well received by the authorities of the Company at the Cape. They were advised to stay in Cape Town until Teunissen the commander of the Company’s post, Zoetemelkswallei, arrived. Teunissen was instructed to assist and advise them to the utmost of his power and, as described above, did so in the beginning. The Landdrost of Stellenbosch too was instructed to protect and aid the missionaries and to order his veldcornets to do the same. Thus the government of the company did much to assist the missionaries in the founding of Genadendal.

Later the attitude of the government changed. It was a result of the difficult position of the last Company Governor Sluysken, who had to defend the cape against British attack hampered by revolts in the interior. Sluysken in deference to public opinion, prohibited the missionaries from ringing the bell acid from erecting buildings. The most serious interference was Sluysken’s order to Teunissen to prevent the overstocking of Baviaanskloof. This prohibited Hottentots from distant parts to bring all their cattle without the permission of their masters. Hottentots, who were not original residents had to return their cattle to where they had come from. The enforcement of this order caused an estrangement between Teunissen and the three missionaries. According to them Teunissen had bribed hottentots to testify.

47) J.R. Hamilton, A History of the Missions of the Moravian Church. 1901, p. 72-4, R. Schneider, 6, p. 14-6; BO 33 Petition by Maravel, Schimm and Kühnel for permission to ring bell, 25th Feb., 1795. Hamilton and Schneider maintain that Sluysken prohibited the erection of a pig-svy, (Zwartbeest huisje — probably Hartebeesthuis) and that the preacher at Stellenbosch complained because he could hear the bell, whereas he did so because the bell was in his parish, c.f. The Lutheran Church in Cape Town, See J. Du Plessis, A History, Ch, IX.
48) BO 33 Instruction of Sluysken regarding Hottentots at Zoetemelkswallei, 10th Jan., 1795, (Translated Copy).
to the authorities in Cape Town that Baviaanskloof was overstocked. Attempts by Marsveld and some Hottentots to procure the revocation of this order proved unsuccessful. On the intervention of friendly farmers the order was rescinded.

These difficulties were not the result of a of policy. Hen the missionaries fled to Cape Town before Pisani in 1795 the threat to the security of Genadendal by this rebel leader was considered as to the authority of the Government by the indignant Governor. when Sluysken had come to an agreement with the swellendam nation, the missionaries returned to Baviaanskloof with his promise of protection. After the surrender of the colony, of the British government towards the mission. he waited on Governor Sluysken, who told him that he had written to

when he visited General Craig he was assured of the protection of the British authorities. Overruling Teunissen's opposition they transformed their promise into actions when some Hottentots petitioned them for permission to proceed to Baviaanskloof they also instructed Teunissen to protect the hottentots at the Baviaanskloof against the violence of the colonists, who were taking the law into their own hands when they heard of Lee arrival of a Dutch fleet under Admiral Lucas. The strong action of the government, when the farmers around Baviaanskloof threatened to destroy the institution, prevented serious developments. The position of missionaries and Hottentots was made secure by the posting of dragoons to Zoetmelksvallei.

The missionaries were again permitted to ring their bell and to erect a church, although the Landrost of Stellenbosch still looked with disfavour upon the institution. the relations between the British administration and the missionaries remained cordial.
Governor Dundas in 1799 on his tour of appeasement of the frontier. 

attitude of the Batavian authorities was very much the same as that of the first British occupation. Both Janssens and De Mist visited Baviaans-kloof and seem to have been impressed. They asked the Brethren at Baviaans-kloof for a captain to serve the Hottentot troops in the camp at Wynberg. Konhammer was selected for this work. The last act of the Batavian government was to give Baviaans-kloof the core appropriate name of Genadendal.

ernor Caledon arrived in 1807, Kühnel wrote:

's that we lost in Governor Jansen, God has given us again in Lord Caledon; who, when Brother Bonatz and I called upon him, assured us of his friendship and good will to our Mission.

he first action of Caledon was to suggest the commencement of a station at Groenekloof (later Mamre) and to grant the land for it. The favourable attitude of the British authorities is evident in the correspondence between Dawning Street and the castle. The Moravian missionaries were recommended to the special care of the Governors at the cape. Successive Governors stated that they appreciated the work of the Moravians and assisted them where they could.

The increase of the land grant and the securing of the title are further proofs of the favour of the government. When in 1817 Somerset, reported to Bathurst that the missionaries in the Colony had not benefited it, he excepted the Moravians. Some even
after the tap had got representative governments)

The governments, however, made use of the man power available at Genadendal. Hottentots were used in the repercussions of the 'trench Revolutionary Wars in the Colony, later they were employed on the Lantern Frontier against the X69. Finally they played their part in the Transvaal jar of 18L.--1.

In 1795 the Dutch East India Company was in dire need of troops when an English attack threatened. It did not hesitate to levy hottentots as auxiliaries. Four cannon shots summoned the Hottentots to defend the Gape. the missionaries admonished the Hottentots to go which they dig!, albeit reluctantly. Because of the absence of the :_en the government had to provide floor for the dependents of the soldiers. In September, 1795 most of the Hottentot auxiliaries returned. "f their conduct as soldiers the missionaries report:

he Hottentots ae in general considered as grave soldiers, and were always pot in the van, the farmers and citizens bringing up the rear." )

As the English had difficulties in the interior and their forces were limited, they also recruited men from, the settlement. In May, 1796 there were over a hundred men in their service. e congregation was depleted because the men took their wives and children with them. the missionaries had difficulties in feeding those dependents who stayed. After the surrender of the Dutch fleet in Saldanha Bay the colonists acquiesced in the English rule and the English released many Coloured soldiers. )

Governor Janssens in turn called for Hottentot volunteers. in 1803 already successful attempts were made at recruiting Hottentots. In October and September 1803 about 30 Hotten- tots volunteered and joined the forces in Gape .own. the Batavian authorities were especially desirous of having; pendent Baviaanskloof men as sergeants and corporals. The rest of the tibia bodied men promised to proceed to Gape X60411 when the signal can was fired. Captain Beseur praised their conduct and said their only complaint was the copious swearing of the other volunteers at Wynberg. Governor Janssens quartered the dependents of Hottentot volunteers on the
Baviaanskloof village. 187 women and children arrived there in October, 1804. Soon afterwards the able bodied men, who had not volunteered, were called to Cape Town.\[70\]

After 18c6 the English authorities required troops to defend the eastern Frontier. Besides volunteers, 90 men were commandeered to join the army in 1811.\[71\] In the following year 21 volunteers were recruited for a hottentot regiment.\[72\]

Hottentot volunteers on their discharge in the jeers between 1810 and 1820 had to promise to proceed to an institute such as Genadendal.\[73\]

Soldiers from the were \textit{highly} valued because:

\ldots whilst the hottentot soldier, formerly without sense or feeling of religion, now knows the nature of an oath and appreciates its value."

In 1619 the danger had become so acute that the 105 men with him to join the burgher forces as wagoners. he had been ordered to enlist 120 men but through the intercession of Hallbeck he was satisfied with fewer. she enlisted men had all returned by the end of the year.\[75\]

In February, 1823, Captain Somerset arrived with instructions to recruit Hottentots for the Geese Corps. lie informed the men of this plan. In May a recruiting officer arrived who only procured 13 men. He caused a disturbance on using liquor to persuade others to join the gores. the missionaries put a stop to this and he complained that the Genadendal people were disobeying government orders. Hallbeck was able to satisfy the authorities and undertook to explain the need for soldiers to his people. Shen eleven more Hottentots were prepared to go.

in 1835 200 men were levied for a commando. The Genadendal economy was hard hit by the absence of the men, burghers had been discharged.\[77\] The government was forced to supply the dependents with flour. Their commanding officer
was pleased with the conduct of the hottentots and said they were a model to the regiment. They were only discharged in 1836. 78)

In May, 1846 over 300 men were levied from Genadendal for the Seventh Kaffir War. They returned in February, the following year. This time they were able to send home some money. They sent letters home fairly frequently. Again they were highly praised by their commanders. Their only fault found with them was that they sometimes drank too much. After they had returned, another attempt was made to recruit volunteers. Favourable terms were offered and eventually about 100 men joined the Hottentot Corps. They were promised land in Kaffraria and a free journey for their dependents to their future domicile near the frontier. 79)

In January, and February, 1851 many were again prepared to defend the Colony in the Eighth Kaffir War. In the end about 361 men from Genadendal served at the front. Three stations of the Moravian Brethren alone, provided 1,000 men for the prosecution of the war. The Genadendalers experienced sharp engagements in the Amatola Mountains and acquitted themselves well. They remained loyal to the government after the Shiloh and not Hottentots revolted. Most of these

Hottentots arrived back in July, 1851 and immediately recruiting started for the formation of a free corps. As the returned men had been dissatisfied with their burgher officers, who had seduced the young Hottentot to drinking and card playing, the recruiting was unsuccessful at first. However, over a hundred men from Genadendal volunteered. Some returned but about 70 of them remained on the frontier and began to lead the dissipated life of soldiers. 80)

When an attempt was made in 1878 to recruit 300 volunteers not one of the beside; as would risk his life as they did not consider the Colony endangered. 81) in 1681, however, over a hundred men were prepared to join the forces as wagoners. 82)

The Coloured community also played a part in the con-
stitutional development of the Cape colony. When in 1846, the Colony was stirred to indignation by the plan to land convicts at the Cape, the missionaries felt that this would endanger the moral security of their Hottentots. They therefore drew up a petition signed by 472 coloureds and requested the revocation of this order. In 1849 the residents pledged their support to the Anti-Convict-Association, and when the ship had arrived in Able Bay many Genadendalers signed the resolution passed at the mass Meeting which decided to actively oppose the landing of the convicts.

Introduction of the representative constitution in 1653 filled the Coloureds at Genadendal with apprehension and the missionaries had to explain it to them and allay their fears. By this constitution many residents qualified as voters. The elections held in 1854 were fairly quiet, but in the 1856 elections the missionaries were shocked by the copious drinking. In 1669 the candidates for the Upper house provided a roast in Genadendal at which wine was served and the candidates for the Lower House procured votes by bribing members of the electorate. During the elections in 1671 the missionaries estimated that 1.500 bottles of wine were brought into the settlement. When, as in 1874, there was no polling station at Genadendal, the successful candidates thanked the Genadendal electorate for their support by sending 450 bottles of wine; wonder the missionaries felt that the right to vote was of no real benefit to the Coloureds at Genadendal. In 1878 they again complain of copious bribing. Unscrupulous candidates made use of the Coloured vote for their own ends, yet the Brethren dared not advise their charges for fear of evoking the opposition of the political parties.

"...Tenn ein angehender volksbeglücker 'Utz wad Stimne Parlament erlangen will, werden hunderte von refund sterling ausgegeben, um die Stimmen der Habigen zu erhalten, und ist dann der Zweck er-"
reicht, dem hilft sin solcher durch die Stimmen der Eingeboren die Stimmen des Parlaments. Gelangt es, esetze machen, die parade diese armen Eingeboren aufs empfindlichste treffen und schädigen.

In 1884 the secret ballot was introduced and this improved the behaviour of voters at Genadendal. The granting first of representative and then of responsible government to the Apartheid Colony made the government subject to censure by the fuming interest, and therefore, the influence of the missionaries on government policy became less effective. Their advent of the Afrikaner bond in the 1880ies made the missionaries apprehensive. We Government, influenced by this party, reduced the financial grants to mission schools. The relations between the community and government were only stabilised when the 1909 Mission Lands Act was applied to Genadendal in 1926.94)

91) Nechr. 3. 1885: Ber. G., Jul. – Dez., 1883. (When a prospective benefactor of the people wishes to get a seat in Parliament, hundreds of pounds sterling are expended to obtain the votes of the Coloureds, and when the goal is reached such a man, who has been voted into Parliament by the natives, helps to pass legislation that is especially injurious to these poor natives.)

VI.

The colonists were divided in their attitude towards the United Brethren at Genadendal. There were always some who were favourably inclined to the missionaries; others were bitterly opposed.

The first missionaries were welcomed by a number of fervent Christians in Cape Town, and they called on a certain Cloete at Constantia. When the missionaries had established themselves at aviaanskloof, two farmers visited them and one of the two invited them to his home, saying: "Let us be good neighbours." The missionaries visited the farmers and European visitors attended the services at Baviaanskloof. It was on religious grounds that this early friendship between farmers and missionaries was based.

European who attended services on festive occasions are frequently mentioned in the accounts from 1750 onwards to about 1850. From then such visitors became fewer until at the end of our period no persons from the neighbourhood, except clergymen, visited the institution. Until the emancipation of the slaves in 1838, the slaves from neighbouring farms, accompanied by their masters, attended divine service at Genadendal and Christmas and New Year services were generally well attended because farmers allowed their Hottentot servants to go to Genadendal after the harvest had been gathered in. The intervention of Mr. Cloete and his friends saved Baviaanskloof from serious trouble. On receiving Cloete's report on the order limiting the number of cattle at the station, the authorities rescinded the order. Cloete later purchased the land adjoining the mission 'with a view to the safety of the mission.'

There was, however, also a great deal of bitter opposition to the missionaries. The reasons for this opposition are obvious. The farmers feared that the institution at Baviaanskloof would deplete their labour supply because the Hottentots obviously preferred to go there than work for them. The mission lands, furthermore, limited the expansion

---

3) Nohr. and P. Accs. passim.
of the farmers. In addition the farmers felt that the Hottentots should not benefit from an education that they had never been able to procure for themselves. As Calvinists, the colonists at first opposed the type of religion preached at Baviaanskloof. Finally, they disliked that the missionaries interceded for the Hottentots when they had been ill-treated by their masters.

Certain colonists, therefore, attempted to make the position of the missionaries untenable. They planned a boycott of the mission which was unsuccessful. Farmers tried to detain Hottentots proceeding to Baviaanskloof by such methods as holding back their children. Malicious rumours were started with the aim of deterring Hottentots from moving to the station.

In 1795, when the Cape was troubled by disturbances in the interior and the threat of an English attack, the security of the missionaries too was threatened. In July Hottentots reported that the farmers who had taken part in the revolt at Swellendam had told them that the school at Baviaanskloof would soon no longer exist. The three missionaries thereupon prepared for flight. On the advice of Teunissen they sent home all the Hottentots who came from beyond the Sonderend River to pacify the insurgents. But on the 20th July, some of the 'nationals' arrived to inform them of their decision regarding the institution. Kühnel was shown an article in their manifesto which read as follows:

"I will not permit any Moravians to live here and instruct the Hottentots, for as there are many Christians who receive no instruction, it is not proper, that the Hottentots should be made wiser than the Christians, but they must remain what they were formerly.

Those Hottentots who were born on a farmer's estate must live there, and serve the farmer till they are 25 years old, before they receive wages. The Hottentots must live among the farmers and not assemble together as at Baviaans Kloof.

All Bushmen, or wild Hottentots caught by us, must remain slaves for life.

Item, the Moravians were never meant to be employed among the Hottentots of this country, but among the Bushmen..."
This manifesto was said to have been sizzled by three thousand. Yet the threats of the 'nationals' themselves did not mat-ternalize.  

In July the Brethren received a peremptory order from Commandant Pisani, who was reputed to be marching on Rodesand with 800 men, to leave Baviaanskloof immediately. Teunissen advised them to go to Cape Town and promised to take care of their belongings. They left Baviaanskloof on the 31st, July. On arrival in Cape Town they immediately proceeded to the Governor, who was surprised at the audacity of Pisani. The representative of the 'nationals' in Cape Town, who was negotiating an agreement on the defence of the Colony with the authorities of the company, told the missionaries that Pisani was not one of them and that they would not be tamed if they returned. Pisani was captured by the 'nationals' themselves and handed over to the officials in Cape Town. The Governor was then of the opinion that they would be safe, so in August they returned on the wa-rents of one of their farmer friends.

In February, 1796, after the English had occupied the Cape apparently another attack on the mission threatened. According to the journal a number of men gathered on a farm near Baviaanskloof with the aim of destroying the station. Hottentots brought the news of this attack to the missionaries, another informed the government. General Craig sent a letter to Teunissen threatening severe reprisals if such an outrage should occur. After this incident, never more than a strong threat, there was peace.

In subsequent years a number of 'unimportant differences over the boundaries of land' arose. In 1796 their old friend Cloete complained about the tresspassing of cattle onto his farm. Similar complaints were made by farmers who lived beyond Cloete's establishment. The missionaries believed that the land on which the cattle of the Hottentots grazed did not belong to Cloete as no farms were to have been given out in the Baviaanskloof area. In fairness to
Cloete, however, it must be mentioned that he produced his title to the farm Weltevreden. The only condition that the Company had imposed was that Cloete was not to drive his cattle through the Sonderend and thereby infringe the rights of the neighbouring Hottentots.20) Three years later, the missionaries and Cloete’s son came to an agreement. The Hottentots were permitted to graze their cattle on Cloete’s farm twice a week.21)

In 1799 the missionaries petitioned the English Governor because of the encroachment of two farmers on Baviaanskloof land.22) The matter was settled in favour of the missionaries after the land had been resurveyed.23) All the land seized by the farmers was not returned because it would have endangered their financial position. Baviaanskloof was compensated by a grant of money towards the cultivation of the land returned.24) After this no serious boundary disputes are on record except unfounded claims of certain residents in 1850 and 1907.25) The relations between the missionaries and the colonists improved steadily during the first British occupation. The number of visitors to the services held at Baviaanskloof increased. Their attitude towards these services was no longer one of curiosity. We one of religious sincerity.26) They permitted their slaves to attend.27) From eighty to a hundred whites attended the Christmas and New Year services in 1801. They were beginning to appreciate the value of Hottentots educated at Baviaanskloof and meet to prefer Christian servants to heathen.28) When Lichtenstein visited the settlement he noted that cordial friendship existed between missionaries and the colonists.29)
After 1802 it was a regular practice for colonists to spend Christians and New Tear at Genadendal. The colonists were accommodated in the mouses of Coloured residents. Sometimes there were over twenty wagons on the 'wer t.' The number of people attending religious festivals decreased after 1850, although in 1869 nearly a hundred Whites attended be services at Easter. In general the attitude of the Europeans had changed, and it is noted with surprise the diary 016 Berea for 1872 that Europeans attended a service together with the Coloured inhabitants.

The missionaries thus had opportunities to influence the religious views of their neighbour. They used hotton-tots to disperse tracts among the farmers. As wealthier the colonists grew in relation to the Coloureds the less frequently did this take place. Colonists soon showed that they were genuinely affected by the teaching of the brethren and special Meetings were held for them. In the early 1830ies the missionaries discerned a definite awakening among the farmers. The Brethren frequently held burial services for deceased colonists in the vicinity. The religious influence of the missionaries over the colonists grew less when they were better served by their own clergy.

The services of the brethren on the outstations were also attended by colonists. In deed some farmers made it possible for the brethren to found outstations on their farms. Healthy colonists occasionally gave valuable presents, for instance Baron Ludwig who presented English, Dutch and German books for the Genadendal library and a bell ringing apparatus for Kopjes Kasteel. During the famine in 1822 Landdrost Schönberg of Swellendam opened a subscription for the
poor in Genadendal.\textsuperscript{42} The colonists, were, however, criticised by the Rev. J. Murray for not leading a Christian life themselves and thus setting an example to their servants. \textsuperscript{43}

There was bound to be some social contact between the farmers and the Coloured inhabitants of the settlement. The missionaries realised from the very beginning that it caused vice and even crime among their charges.\textsuperscript{44} There went out to work for the farmers.\textsuperscript{14} There were the detrimental effects of migratory labour on family life. Both men and women labourers had to sleep in one room. By the tot system the labourers were given wine four to five times a day and sometimes instead of wages.\textsuperscript{45} No wonder missionaries expected to hear of regrettable incidents during the harvest season.\textsuperscript{46} One farmer gave his labourers plenty of wine but hardly ever money and when they wished to leave he made out that they owed him money. \textsuperscript{47} 'Canteens' were licensed in the neighbourhood of Genadendal through the efforts of enemies of the mission on the licensing boards.\textsuperscript{48} The missionaries criticised the farmers in their accounts because they did not give their coloured labourers enough wages and in fact despised them. \textsuperscript{49}

The European entered the village for other than religious reasons. In 1844 for instance a European arrived with a wagon and brazenly commenced to sell wine ignoring the requests of the Brethren and 'opzieners' to leave.\textsuperscript{50} In 1834 a White youth had to be ejected by the 'opzieners' because he was found in houses where there were women only.\textsuperscript{51} In the 1860ies the young colonists apparently caused many disturbances. The Brethren had to stop a number of dances organised by whites in the village for their amusement.\textsuperscript{52} In 1869 the missionaries feared the visit of European
crew -ear because of the disturbances they caused. 

'here were some moves made by colonists aired at putting difficulties in the way of the missionaries. The attempt by the colonists to introduce individual tenure at Genadendal in Parliament has been mentioned. The interrogation of farmer neighbours showed that the instigators of this move had received most of their information from Christian Reitz, who had been excluded from the congregation and had caused the missionaries serious trouble by opening a 'canteen' in the village. The farmers objected to the store at Genadendal and the supply of wine to the Coloureds by the missionaries. An influential enemy of the mission caused the replacement of the Coloured constable by a white constable. Colonists who looked at the mission were at the bottoms of the movement to grant liquor licenses to inhabitants of Greyton. The aim was to make the stationing of a magistrate there necessary as it was felt that the magistrate at Caledon was too sympathetic towards the Coloureds. According to the missionaries a malignant attack on Genadendal by a colonist in the Divisional Council was the reason for the high assessment of Genadendal for the purpose of a road tax. Impassioned attacks on the mission sometimes appeared in the press. In some cases the accusations were refuted by outsiders. Some of the outcries led to government investigations of conditions at the station. Usually the conduct of the missionaries and the inhabitants of Genadendal was vindicated on such occasions.

Genadendal was never the cause for a political controversy. The records of the United Brethren fission hardly refer to the outburst against The Moravians...
were especially excepted from the accusations which an agricultural society made in 1627 against the missionaries in general. Political attacks on the Moravian stations only became serious during the 1850ies but were never widespread. A non-farming section of the white population was highly sympathetic to the missionaries. The most important group of people who visited Genadendal and expressed admiration for the work done there consisted of nigh officials.

Frequently, especially in the early years, such people as officers from the Cape Town garrison or from ships in the harbour called. Frequently the village was visited by persons from overseas and often officials of the Indian government. In many cases they presented the mission with generous sums of money. After 1846 these visits decreased as a result of the introduction of a steamship route via the iced sea. The missionaries remark with regret that this development was a loss to Cape Town and to the mission. The missionaries also received visits of sympathisers such as the late Schmidt, who had acted as their host in 1792, and Thomas Pringle, who was laid up in Genadendal after breaking his leg. The early relations of the Moravian with religious fellow workers were on the whole fairly cordial. In spite of Calvinist prejudice against the United Brethren some leading predikants, such as an bier and Jos, were great friends of the first missionaries. These relations improved rapidly after the inception of the South African Missionary Society. Relations with the Lutheran pastors in Cape town are always of the happiest.

The mission: Genadendal had become famous it was visited by

many missionaries, some of whom came for help and advice. The Brethren tried to dissuade Captain Gardiner from going o the 'Zoolahs', they impressed Campbell with their institution. Dr. Philip visited unadendal trice and once spoke in English to those who could follow him in that language. Converted Basusus of the kiwis Evangelical Society, who had come with their reachers, talked to the congregation in their own tongue 'with the aid of interpreters. The inhabitants of the village took a great interest in the visit of the Reverend Head junior. Relations with the Berlin and Rhenish societies were always excellent.
VII.

reason for the favour with which the Government treated the colonists looked upon the mission settlement at Genadendal were that it and the other Moravian stations, were supposed to be economically sound and that the inhabitants were taught to work and be thrifty. His opinion was usually arrived at after a comparison of Genadendal with Bethelsdorp. He Moravian missionaries themselves did not believe that the Bethelsdorp Hottentots were less industrious. Then a comparison like this is made it is necessary to take into account the time when the comparison was made. It must be remembered that Baviaanskloof-Ganadendal had ten years start of Bethelsdorp. Most of the criticisms of the latter station are found in early documents. In Genadendal the diligence of the Hottentots could easily be observed in the workshops, whereas the Bethelsdorp Coloureds were mainly agricultural workers. There were no village industries for lack of water and of suitable missionaries to teach trades. Moreover, the geographical factor must be considered. Genadendal in comparison with Bethelsdorp had undoubtedly the more advantageous setting. It had a fairly abundant supply of water. Water was available for the mill and irrigation. Although the soil was not very fertile it could be irrigated and in Lea Cale this is often important. Thus Breutel could write of Genadendal:

he gardens, which are well stocked with excellent vegetables, as well as with orange, peach, and rose-trees, afford sustenance to the body and pleasure to the eyes. A fine plantation of forest-trees surrounds them, Genadendal is proof of what industry can effect in south Africa, where an apple supply of water can be obtained, and in a locality in which the temperate and the torrid zones see to join hands.

Genadendal was, however, not a Garden of Eden and, especially in the beginning the Missionaries and use inhabitants had to contend with many difficulties caused by their environment. Be abundance of water was not an unmix blessing. Fairly frequently the gardens and cornlands were damaged by floods. Such as for instance in 101 and in 1378 en a hundred gardens and many houses are

In the early years the agricultural and pastoral activities of the inhabitants were hampered by the attacks of wild animals. After the Hottentots had killed a large 'wolf' (probably a leopard) in March, 1799 the missionaries exclaimed:

"We were glad to have destroyed so great an enemy to our stock, for there are enough of other descriptions, tigers, jackals, mongooses, ... with whom we are continually at war." 3

Raboons were a menace to the gardens as late as 1890, and a leopard was seen in the grounds at the same time. 7

Another great danger that was continually threatening Genadendal was the threat of veld fires. The parched veld during the summer increased the danger of fires. 8 When a veld fire threatened the bell on the 'werft' was rung and as many people as possible would gather together to fight it. 9 The village possessed a fire-engine as early as 1812 but it was of little use against grass fires. 10 The buildings on the 'werft' and in the settlement with their thatched roofs were and still are very vulnerable to fire. That they were never burnt down even after the fire-fighters had given up hope of saving them was felt to be due to divine intervention. In January, 1878 the wind turned; 11 on another occasion there was rain. 12

The money required to run the institution came from both outside and inside Genadendal. The main income was derived from contributions of the Elder's Conference and from wealthy sympathisers of the mission. In the early years funds were made available by the Society of Friends of the United Brethren Mission in Holland. It together with the Zeyts settlement raised most of the money required at Baviaanskloof up till 1800. 13 Later other societies such as the London Association of Friends of the United Brethren Missions also played an important part in the collection of funds. 14

7) F. Accs. No. 4, 1890: Son of Dr. Bury, G., 29th May, 1890.

Frequently the accounts enumerate gifts of clothing, plates and books from these societies.\textsuperscript{15} Individuals also gave gifts, such as a fire-engine, medicines,\textsuperscript{16} a handmill,\textsuperscript{17} an organ for the Genadendal church,\textsuperscript{18} and clothing.\textsuperscript{19} The distribution of presents of clothing or similar gifts was difficult.\textsuperscript{20} In some cases such gifts were sold at low prices and the money was used for the poor box.\textsuperscript{21}

In times of need special remissions were made by the Elder's Conference and the friends of the mission. This was the case in the disastrous years of 1823-5.\textsuperscript{22} Special donations were also made when a new church was erected, for example at Berea,\textsuperscript{23} or for the present Church in Genadendal.\textsuperscript{24}

A certain amount of financial help was offered from within the Cape Colony. In 1795 and in 1799-1800 the government of the Colony provided the timber necessary for the erection of a church gratis.\textsuperscript{25} In the building of the first house at Baviaanskloof, Reunissen procured the building material for the first house at reduced prices.\textsuperscript{26}

Before 1846 an important source of such money was made by donations of visitors, mainly officials from India. Slaves, in a position to earn money, also made contributions for the poor.\textsuperscript{27} A number of colonists sympathetic towards the mission sent aid. Landdrost Schönberg and Baron Ludwig have been mentioned. Later certain farmers provided land for outstations and contributed money for the erection of chapels. The Coloured members of the congregations on the outstations

also collected funds. 28)

The missionaries aim from the beginning was to make the settlement self-sufficient. They therefore, commenced to teach the congregation to pay its way. The first suggestion to the chapel-servants and the congregation was to pay for the lighting of the church. Consequently the first church fee consisted of either a certain weight of tallow to be supplied when stock was slaughtered or sixpence a year. 29) In 1802 the members of the congregation decided to pay an annual church fee of one shilling. 30) In the course of time the amount was increased until in June, 1866 it was fixed at 6 shillings for men over 17 years and 4 shillings for women. 31) However, the willingness to pay was no longer general. In 1870 some members sent a petition to the Governor complaining that they were being forced to pay the fee. 32) Although the petition was not considered by the Governor the contribution was not paid by approximately thirty percent of the members. 33) There were regular collections in church for special purposes, for instance, for mission work in other fields, 34) and the collection of funds for the new church between 1891 and 1893. The cottentots in the village managed to raise a sum of £225 over a period of three years for their new church. 35)

The idea of work for the good of the congregation was always present. When the first church was built in 1799-1800 the women and children gathered stones for the foundation and burnt bricks while the men transported the timber granted by the government. 36) The present church was also built with the help of members of the congregation. 37) Repair work and improvements on buildings and property used by the congregation were also carried out on a co-operative basis for example the upkeep of the burial ground. 38)

34) ibid., 1. 1848: Ber. G., 1848.
35) P. Accs. No. 14, 1893: A Red Letter Day for G.,
As the mission was to be self-sufficient in order to grow their own food the first three Brethren commenced with preparation of ground for a garden in March, 1793, and later planted a vineyard. Soon the garden supplied most of their provisions and was admired by visitors. Their first attempts to keep cattle and goats were not successful, but soon the Brethren learnt how to look after them. The missionaries, however, it should be noted never used the land for their own profit.

The 'industries' established on the station were to earn a profit to defray expenses incurred on the station. The energetic Kühnel established the knife manufacturing department. By 1797 his knives were being bought and sold in Cape Town at double the price. Kühnel had to make the tools necessary to shape the knives himself, with the help of his Hottentot labourers. In the beginning these knives produced the main income on the station. In 1808, however, they brought in only 300–400 rds. annually. Later the manufacture of cutlery became less important.

A smithy was built in 1811. When Latrobe visited the settlement the combined cutlery and smithy employed 14 Hottentots. The smithy was mainly used to manufacture ironwork needed on the station. In 1847 ploughshares were produced in it.

The mill, built in 1797 to grind corn for the Hottentots and the missionaries was soon used by colonists as well. The mill was continually being improved. In 1818

new millstones from the mine arrived. They were both better and cheaper than those hewn at Stellenbosch.\textsuperscript{54}) In 1826 a new and larger waterwheel for the mill was fitted,\textsuperscript{55}) and in 1834 a new mill was erected by Klinghardt.\textsuperscript{56}) The mill was still in use a few years ago.\textsuperscript{57})

Of the other trades introduced with the double aim of training craftsmen and of bringing in money for the mission the joiner's shop erected in 1811\textsuperscript{58}) and the tannery, must be mentioned. An Irishman was engaged for the express purpose of starting the latter in 1828.\textsuperscript{59}) It was still producing in 1864.\textsuperscript{60}) Bigge mentions wheelwrights in 1823,\textsuperscript{61}) but wagon-making soon ceased to be a profitable undertaking. In 1862 Lady Duff Gordon met "a carpenter, a cabinet-maker, a shoe-maker, a storekeeper..."\textsuperscript{62}) Towards the end of the century new industries were introduced by the missionaries to provide the inhabitants with a means of making a living.

The 'store' was run by the missionaries for the good of the Hottentots. Since the Hottentots at first had no sense of the value of money they were easily duped by the farmers who supplied them with necessities. The missionaries strongly advised the villagers to buy from their store.\textsuperscript{63}) The 'store' did, however, assist the station in its efforts towards self-support.\textsuperscript{64})

The money derived from the Mission Directory and from the station's 'industries' was spent in various ways. Clothing and food for the 'missionary family' was not very expensive as the missionaries only received small salaries. When buildings had to be erected the expenses rose.\textsuperscript{65}) In
1803 the task of making Genadendal financially independent was judged to be impossible. The only income from the station had been the 300-400 rds. from kühnals knives. In 1820, however, when the expenses of the 'missionary family' amounted to 5,000 rds. or £2500 the deficit was only £19. Genadendal reports a surplus in 1834 only, but it is a fairly large sum of £400 and it covered all the deficits in the Western Province in that year. In 1855, when the Berea church was erected the station definitely needed outside financial aid. In 1882 the Western Province stations had again been financially independent for a number of years, but the 1880ies brought depression to the Cape and the Western Province stations were no self-supporting again till 1890. This 'financial independence' refers only to current expenditure.

To judge the standard of living at Genadendal the following fact should be considered. The village grew hazardless, mainly on the sides of the valley so that the lower lying valuable irrigable garden land could be reserved for cultivation. It differs in this respect from its sister stations at Ann and Elia. Lichtenstein described the village as follows:

"Vierhunder Häuser und Hütten mit daran stossenden kleinen Gärten, in ordentliche Strassen verteilt, geben diesem Ort vollkommen das Ansehen eines europäischen Dorfes..."

A description of the village at the end of the century shows that it had changed little:

75) Theal, Records, xxxv, p. 329.
76) H. Lichtenstein, I, p. 245-7. (The two hundred houses and huts with the adjoining small garden plots, divided neatly into streets, gave the place the atmosphere of a European village.)
“The village, with its fruitful gardens, wonderfully beautiful just now in their fresh young verdure, adjoins the missionary quarter, and fills the basin of the valley in every direction. Ga-nadendal has three thousand inhabitants, and is divided into several sections, Sevenfontein, Klipperstrame, Vlei, Bergstrame and Kornlandskloof.”77)

The number of houses at Baviansskloof in 1799 was 238, these were probably huts.78) Latrobe counted 256 “cottages and huts.”79) In 1820 there are 283 houses and 90 of these are walled.80) During the critical years, and after the numbers of dwellings decreased appreciably. In that year there were only 246 houses of which 85 were walled.81) This tendency continued till 1826, when there were only 219 houses in the village.82) After that, however, there was a gradual increase83) until in 1833 there are again 253 dwellings of which 117 are walled.84) The emancipation of the slaves had an effect on the number of houses in the village. In 1847 there were 365 larger and smaller houses and 217 huts.85) There was no great increase after this and in 1875 a government census showed that there were 482 houses.86)

There were thus two types of houses in the village. In 1798 they were described as follows:

“The huts were of clay, thatched with rushes, some square as in Ireland, others round in the original Hottentot fashion, and brought up to the top without rushes, a hole only being left in the middle to serve as a vent, and another for the door.”87)

The huts were built in the native manner by driving poles into the ground in a circle, twelve feet in diameter, bending them and tying them at the top so that the centre of the framework was five feet from the ground. This structure was covered with matting and skins and it was necessary to

creep into the hole left on the one side. Most of the walled houses were probably built in the following manner. Clay was broken up with plough and harrow. The material won in this way was drawn to the building site by oxen in a bullock's hide. The clay was then formed into bricks and the wall built a foot high on the first day after which it had to be left to dry for a day. The wall was gradually raised until the roof could be put on. In some cases the gable ends were built with burnt bricks. The cottages were usually divided into two apartments, one for cooking and sleeping and the other for storing field and garden products. Some of the houses were not very well built and in some cases collapsed, injuring the inmates. The building of solid houses was subsidized by the mission from money received in the difficult years of 1822-3. Nevertheless many of the houses were still of rushes and clay in 1842. The subsidizing of houses was continued till 1855 when the money was appropriated for schools and churches.

Some of the better off residents had fairly respectable houses. Lichtenstein says that the chapel-servants, usually the most well to do, had houses very similar to those of the colonists on the border. Lady Duff Gordon lived in such a house in 1862:

"The cottage was thus: One large hall; my bedroom on the right, Sally's (her English maid) on the left; the kitchen behind me; Miss alt's behind Sally; mud floors daintily washed over with fresh cow-dung; ceiling of big rafters just as they had grown, on which rested bamboo canes close together across the rafters, and bound together between each with transverse bamboo - a pretty beehive effect; at top, mud again, and then a high thatched roof and a loft or saller for forage, &c., the walls of course mud, very thick and white washed."

In 1873 a house was built by one of the inhabitants which cost £103 and for which the owner paid cash. But these were exceptions.

The mud houses sometimes did not stand up to heavy rain as in April, 1878.

Lady Anne Barnard tells us what the inside of the simpler Hottentot huts looked like.

"I entered one or two of the round ones; the Hottentots were out, working in the field; furniture there was none, a few sticks were in the centre to boil their kettle, and tied to the sticks of the roof were a few skins, some calabashes, an iron pot, a couple of spoons made of bits of wood, to the end of which a calabash shell was spliced and tied on, some calabash ladles and bowls."  

The fireplaces were open and raised a foot above the ground. In the evening the inhabitants of the dwelling sat on the raised fire place feeding the fire with twigs. As a result children often fell in and were burned, sometimes even to death.  

In 1862, the cottages were described thus:

"All were neat and clean, with good dressers of crockery; the very poorest, like the worst in Maybridge sandpits; but they had no glass windows, only a wooden shutter, and no doors; a calico curtain, or a sort of hurdle supplying its place."  

The general impression the houses made on a visitor in 1892 is not much different:

"The houses of the natives ... have mud walls. Mother Earth also constitutes the floor. Though they are all of the same primitive material, and but one storey in height, one sees great variety, for example, in the number, size and form of the windows. Some indeed have no windows whatever,  

97) *Mh. S. 1879: Ber. 6., Jan. - Jun., 1878. (It was miserable after this rain in these houses with defective roofs. In many of them there was not a dry place to be found; whole families passed the night not much better than if they had been out in the open. The sick in such houses were in a sorrowful condition. It was especially bad in the hut of Benjamin and Rosalie January. It is hardly high enough to stand upright; a terrible stench meets the visitor; the floor was a morass.)"  

98) Lady Anne Barnard p. 185.  
100) Lady Duff Gordon, p. 105.
but receive air and light only through the door.

... Their dwellings consist of one living room, one sleeping room and a kitchen; most of them are kept neat and furnished with tables and clean beds. 101

When the missionaries arrived the Hottentots were clothed in sheepskins. One small skin was worn around the waist while another, which was discarded for work, was draped over the shoulders. Their children were carried on the backs of the mothers under the cover of a sheepskin held up by a thong. Both sexes carried bags made of gazelle skins for tobacco-pipe, flint and steel. There was vermilion in the sheepskin clothing of the Hottentots. The only way they knew to get rid of it was to beat the skins with sticks. The missionaries tried to promote cleanliness among their charges. 102

They continued to wear their sheepskins on weekdays, but soon they began to wear clothes they received from the farmer’s wives in lieu of payment on Sundays. 103

Thus when in 1798 Lady Anne Barnard attended an evening service on a week-day, the congregation were all “dressed in the skins of animals.” 104 on a Sunday about half of the three hundred people in the congregation were dressed “in coarse printed cottons, and the other half in sheep-skin dresses,...” 105

Lichtenstein noticed that the well to do wore European dress whilst the poorer class still wore skins; “Sie gehen nach Sauerland in leinernen Wäsern und ledernen Einkleidern und tragen Hüte, die Frauen in weissen Wicken, baumwollenen Camisolen mit langen Ärmeln und Hauben. Die niedrigeren, rohre Klasse kleidet sich zwar noch in Felle, doch wird durchaus auf Reinlichkeit gehalten und keine Nacktheit geduldet.” 106

In Lestrobe’s time some men were still clothed in karcasses and leather aprons. Most of the residents wore European dress for the Sunday services and even dressed their children in linen and calico shirts and dresses. 107

106) E. Lichtenstein, I, p. 252. (They dress after the peasant fashion in linen jackets and leather trousers and carry hats, the women go in woollen skirts, and cotton blouses with long sleeves and bonnets. The lower, more primitive class still wear skins, but cleanliness is expected of them and no nakedness is permitted.)
107) G. J. Lestrobe, p. 93-4.
Brethren themselves complain that the boys often wore nothing but a shirt or a pair of trousers, the girls only a dress of cotton and they blame the inhabitants' lack of thrift for this. In 1862 Lady Duff Gordon was impressed with the smartness of dress of the congregation and she praises the cleanliness of the residents.

"Also they are very clean people, addicted to smoking more than any others. They are also far cleaner in their huts than any but the very best English poor." The efforts of the Brethren to teach their wards cleanliness had thus had a measure of success.

Buchner was surprised at the number of people at Genadendal who suffered from lung and bronchial diseases. He ascribed the frequency of this affection to their irregular habits of living. Presumably a great number were affected by tuberculosis. Genadendal was a haven for lepers as late as 1861. The village was occasionally ravaged by epidemics and a disease, apparently typhoid fever caused the death of 162 Hottentots in 1800. From 1865 to 1867 the same disease returned. It had a disastrous effect on the income of the village as farmers would not employ labourers from Genadendal for fear of infection.

The first severe outbreak of small-pox in the settlement was in 1858. In spite of the efforts of Brother Roser, who had 3,000 inhabitants vaccinated in the course of a few days, there were 29 cases of whom 10 were fatal. There was a second outbreak of this disease in 1882 when the 'Drummond Castle' brought the infection to the Cape. There were 235 cases of whom 54 died. The missionaries had to organize relief. Some colonists sent help, five sent

money and one wagon load of fish. A member of the Upper House persuaded the government to place the sum of £70 at the disposal of the missionaries.\footnote{118} Shortly before Genadendal had suffered from an attack of epidemic dysentery which started in 1880\footnote{119} and raged throughout 1881.\footnote{120} The village also experienced epidemics of whooping-cough and measles. The missionaries blamed the careless nursing of the children by their parents as the cause of many deaths.\footnote{121}

In good years the diet of the inhabitants of Genadendal was fairly balanced. The staple food was wheat as is evident from the anxiety with which the missionaries followed the price of corn.\footnote{122} In 1813 Hallbeck calculated the consumption of a thrifty family with two non-earning children. He found that their weekly average consumption was one 'emmer' (56\text{litres}) of wheat, 4 lbs. meat, 3-4 lbs. rice, and 2-5 lbs mutton fat besides the vegetables that they produced in their garden.\footnote{123} In a good fruit season Genadendal had an abundance of deciduous and citrus fruit.\footnote{124} The inhabitants were, however, not at a loss when the harvest of wheat was bad. They fell back on 'veldkos' and gathered edible bulbs.\footnote{125} In 1801 during a famine the inhabitants of the village had to fall back on acorns and roots for subsistence.\footnote{126} There were also wild almonds which when cooked were nourishing. In the difficult 1820s these were an important part of the diet of the villagers.\footnote{127} When hard pressed the inhabitants of Genadendal migrated to the coast where they could subsist on fish.\footnote{128}

A large amount of the food supply of the Hottentots

came from the gardens and arable land of the settlement, especially after they had learnt the rudiments of agriculture from the Brethren. From the very earliest beginnings, however, there was a certain amount of migratory labour, especially during the harvest season. As the population increased and the demand for clothing and other commodities grew the proportion of people, especially men, who earned their living outside the settlement increased.

The labourers from Genadendal enjoyed a very good reputation for diligence and industriousness among the European population. In 1798 the Brethren claimed that the farmers preferred to employ Christian Hottentots from Genadendal. A certain section of the farm no longer thought so in 1856.

The labourers from the institution probably varied the reputation they enjoyed. Hallbeck was of the opinion that the converts of other societies were probably as diligent. Another reason for their dependability was that the Genadendals hailed from a more settled community than existed on stations nearer to the border of the Colony. The section of the Cape where it was situated was tranquil.

The men who left Genadendal to seek work found employment mainly in agricultural labourers until after the discovery of diamonds in the Kimberley area in 1869.

In 1797 Barrow stated that "some hire themselves out by the week, month, or year, to the neighbouring peasantry." Soon there was a regular exodus during the ploughing and harvest months. The missionaries realised that the Hottentots were forced to leave the settlement in order to earn a living, but they were of the opinion that with a little more diligence they could have subsisted on the land at the institution. During the ploughing season mainly men went out to work. In April, 1825 out of 1242 inhabitants only 923 were present, but of the 320 persons absent half were

At harvest time the ploughing season only 1% of the village leaving behind only those who had to take care of the sheep. The harvesting usually began in November but sometimes already in October. The labourers returned in the beginning of January. The schools and classes for instruction were normally resumed in the second week of January. Difficult times caused an increase in the number of absent labourers, who were more frequent in the month of January, and the labourers who stayed away were paid for the days they were absent. In some cases those who were paid for work did not afford a steady income right through the year. Instead of money 1.5 the labourers received about 5/16 of a day's wages. After 1700, other factors aggravated the situation. Agricultural machinery was being introduced, which meant less work on the farms. The work did not afford a steady income right through the year. Before 1838 all the labourers had to be paid by the farmers. After 1870, other factors were being introduced, which meant less work on the farms. The work did not afford a steady income right through the year. Before 1838 all the labourers had to be paid by the farmers. When, as in the 1880s, little work could be had on the railways, Genadendal suffered. There was an arrear in tax of about 5,000 Marks (£250) in that year.\(^{150}\)

The first example of non-agricultural work outside Genadendal was found by the young men on the road to Grahamstown in 1845. They received a Wykadar (1/6) a day plus food.\(^{151}\) Perhaps the soldiers might be classified as migratory labour, although they did not always get regularly paid. It was different with the wagon drivers in 1880-1 who worked for remuneration only.\(^{152}\)

The discovery of diamonds in the Kimberley area opened up new opportunities for work outside Genadendal. Already in 1859 some young men left for the mines.\(^{153}\)

The male population of Genadendal found a remunerative field of work when the railway from Wellington to the diamond fields was built from 1873 onwards.\(^{154}\) In 1876 there were as many as 400 labourers working on the line beyond Worcester. They earned from 2 to 5 shillings a day.\(^{155}\) The missionaries estimated that until the railway had reached Beaufort West, when a number of the villagers were discharged, about 11,000 reached Genadendal annually from the railways. Of course not all the money the labourers earned was sent to the village.\(^{156}\) Conditions along the line were in some cases terrible. Some of the contractors who employed Genadendalers exploited them ruthlessly with the result that some labourers did not have the money to pay for the return journey from Beaufort West to Genadendal. They had to walk back a distance of 500 miles!\(^{157}\)

As the line advanced into the interior it became increasingly difficult for men from Genadendal to find work on the railway. The exodus to the towns, especially Cape Town increased correspondingly. There were sufficient people in Cape Town for the erection of the Moravian church in 1886.\(^{158}\)

\(^{151}\) F. Acca. CKV; 1847: Diary G., 1845; Nochr. 1. 1845.
\(^{153}\) ibid., 4. 1873: Ber. G., 1871.
After that year the number of people going to Cape Town increased.\(^{159}\)

This, as has been pointed out, affected the ration of men to women in the latter's favour. In 1826 at the festival for married couples 99 pairs took part, three single men (whose wives were absent) and 40 single women (whose husbands were absent).\(^{160}\) In 1880 the number of men absent had increased and the ratio of men to women among the communicants on the 25th January, was one to two. It is significant that most of the harvest workers had returned by this date.\(^{161}\) In the later 1860ies, however, women began to leave the village in increasing numbers to seek work.\(^{162}\)

When the Brethren arrived at Baviaanskloof in 1792 the Hottentots were essentially cattle herding nomads. The missionaries were of the opinion that they would have to be taught agriculture. This was probably a realistic policy as the Hottentots were increasingly looking land in which they could move around with their herds.

There were many difficulties in the way of teaching the Hottentots agriculture and a settled life. It was difficult to procure sufficient tools. These could only be had in Cape Town and there only at exorbitant prices. The missionaries lent out tools to the Hottentots. Some of these had been acquired from men like Martin Schmidt, their host in Cape Town, who presented them with 50 spades.\(^{163}\) However, by 1799 the Brethren had had some success. Peter Blesier reaped 25 bushels of wheat for every one he sowed. Most of the others reaped wheat twentifold that year, and the harvest of maize and vegetables was plentiful. Imitating the missionaries they planted fruit trees and vegetables such as beans, carrots, and potatoes. The missionaries taught them to discard their aversion for pork. They were beginning to keep pigs by 1799 and these provided them with more fat and more meat than their sheep. In spite of this the missionaries complain that "A lazy heathen nation is not soon trained to industry." Yet they are pleased that only a few lived on 'veldkooi' and that most have accepted the idea of earning something with the work of their hands.\(^{164}\)

---

helped them in preparing the land when they could. The fruitful land which reverted to the mission in 1802 was ditched by the Hottentots themselves. The missionaries organised the communal work and provided the workers with food.\textsuperscript{165} The Hottentots then had sufficient land for gardens and fields for wheat or maize.\textsuperscript{166}

Visitors to Baviaanskloof were unanimous in recording the success of the Brethren in teaching their charges the rudiments of agriculture. Lady Anne Barnard noticed that the small gardens of the Hottentots "were not very neat, but each one had something growing in it."\textsuperscript{167} Lichtenstein describes the agricultural system on the station as follows:

"Jede jede der Hottentotten Familien hat ausser dem Garten hinter dem Hause, in welchem sie zur Anpflanzung von Gemüsen und Obstbäumen angewiesen werden, einen gewissen Anttheil an den fruchtbaren Ländereien dieser Niederung, dessen Grösse sich nach der Anzahl Personen bestimmt die davon ernährt werden sollen. Eine jede muss diesen Acker nach Anweisung der Väter selbst bestellen und erhält Vorschub an Ackergeräth und Saatkorn. Der Fleissige wird durch einen Zuwachs seines Gebietes belohnt, dem Nachlässigsten ein Theil davon wiederum entzogen."\textsuperscript{168}

The way in which the missionaries inculcated industriousness was by rewarding the diligent with an increase in land and punishing the indolent by a diminution of their lots.\textsuperscript{169} This procedure was incorporated in the rules and regulations of the place\textsuperscript{170} and was still enforced in 1896.\textsuperscript{171}

Agriculture was practiced in two forms at Genadendal. There were the gardens in the valley of the Baviaanskloof river; and the wheat fields in the valley of the Sonderend river. If a garden was in good order the owner was reliable.\textsuperscript{172}

According to Hallbeck people who lived on the produce of their gardens, fields and livestock had the best houses and were in the best circumstances.\(^{173}\) This was no longer the case towards the end of the period under discussion. But Buchner was of the opinion that the gardens could, if properly worked produce enough for the inhabitants to have food and to make them able to exchange the excess for other necessities of life.\(^{174}\)

The main crops in the gardens were beans, and potatoes. In the beginning maize likewise was cultivated in the gardens.\(^{175}\) The orchards contained peach, pear, apricot and apple trees, as well as orange trees.\(^{176}\) In January the fruit harvest was usually in full swing and the inhabitants were busy drying their fruit on racks in front of their houses. The fruit crop was usually so abundant at harvest time that the inhabitants subsisted almost exclusively on it. Only the more well-to-do supplemented their diet with fish.\(^{177}\)

The account given crop figures for two years, presumably average years.

To make the gardens sufficiently productive they had to be irrigated. As we have seen the missionaries irrigated their gardens from the very beginning. The method was extended to the Hottentots gardens later on. In 1822 the diary remarks that by the distribution of water from the mill course the gardens had become very productive.\(^{179}\) When rust attacked the wheat in 1826 the irrigation system was improved by building three dams. The work on these dams was paid for by the Mission Directory.\(^{180}\) In 1834 a suggestion made by the missionaries to pay one shilling annually for the repair of the water furrows was accepted.\(^{181}\) In 1861 a dam 20 feet long,

six feet high and four feet wide was erected for the purpose of irrigation. 182) In the end the whole village was reticulated with irrigation furrows running to the gardens. 183) If the gardens had in this manner been protected against droughts, it was much more difficult to protect them against rain and floods. In 1831 and 1839 for instance, floods damaged the gardens and destroyed part of the irrigation dam and furrows. 184) Damage to the irrigation system was always repaired by collective labour. 185) When the crops in the gardens and fields failed, Genadendal had an extremely difficult year. This happened in 1822 when the wheat crop failed and the gardens were inundated. 186) In 1880 the drought even affected the gardens. 187)

The whole family was usually engaged in garden work. 188) As in more primitive societies a system of work parties was used. Five or six garden owners would concentrate their efforts on one garden, the owner of that garden providing both food and wine on the day the party worked for him. Then it moved on to the next garden. No wages were paid, the system worked on a basis of reciprocity. 189)

In the 1820ies about 130 lots of arable land were allotted to inhabitants. Except in bad years over 100 were used each year. In 1820 it was felt that there was too little arable land available. Consequently one of the villagers rented a considerable piece of ground from a neighbouring farmer large enough for the sowing of 15 muids (sacks) of wheat. 191) The lack of arable land is illustrated by the fact that in 1864 only 127 persons worked arable land while 495 persons owned gardens. 192)

They learned ploughing from the Brethren. In July, 1820

Hallbeck saw seventeen ploughs in action. Presumably the tenants of fields co-operated in ploughing.\(^{193}\) The ploughs manufactured in the smithy were suited to conditions at the Cape where an imported cast iron plough was difficult to repair.\(^{194}\) The missionaries also taught the use of manure. Gradually the Hottentots learned to put these lessons into practice.

"There is a want of manure, and therefore, the land must be left to rest after two or three years' culture. The Hottentots have, however, endeavoured to remedy the evil, by putting straw into the beast-kraal, and otherwise taking better care to collect manure, to which, in former times, they could never be brought to attend.\(^{195}\)"

By these methods the inhabitants were able to produce sufficient cereal crops. In 1824 a villager \(\text{who had sown half a muid harvested 35 muids (sacks),}^{196}\) In 1828 when the government provided seed corn because the crops had failed the previous year, the inhabitants gained 113 muid from 1½ muid of seed corn.\(^{197}\) The detailed returns for the years 1864 and 1874 are given below.

1818 to 1828 was the most disastrous decade for agriculture at Genadendal. The harvest in 1818 had been bad, and the price of corn very high.\(^{199}\) The harvest was attacked by rust and although the losses were not in 1829 brought some relief.\(^{200}\) The 1820 harvest at Genadendal was attacked by rust and although the losses were not as great as in other parts of the Colony, the price of corn affected the economy of Genadendal detrimentally.\(^{201}\) The missionaries had to

provide corn at low prices for the 1821 ploughing season. In that year the effect of both drought and rust on the wheat in the whole of the Colony was disastrous. The missionaries feared a famine for Genadendal. There was such a lack of provisions in 1822 that the Brethren had to use money received from the Mission Board to feed the destitute. They provided three meals a week for a month with this money, but otherwise the Coloureds were forced to eat grass! The flooding of the gardens in that year brought greater misery. The famine became so bad that the government had to remit the taxes and granted 4,000 lbs. of rice and 15 bushels of seed corn for relief. This seed corn was soon communally because the individual share was too small to make sowing pay. The harvest in 1822 happened to be fairly good and the price of corn decreased considerably. A large sum of money was received as relief from friends overseas, especially from England. This was used to rehabilitate Genadendal. A certain amount was allocated for the purchase of more seed corn to provide the owners of fields with seed corn free of charge on condition that they returned an equal amount in the following year. Another sum was diverted to the smithy to enable it to repair ploughs free of charge. Bullocks were purchased to make ploughing possible for people who had lost draught cattle during the droughts and the famine. Unfortunately in 1823 the wheat harvest was almost completely destroyed by rust. In 1825 and 1826 rust again destroyed most of their crops. After 1826 there was an improvement. The inhabitants had learnt to rely more on their vegetable gardens which were safe from the rust. In 1839 the crops in the 'saailande' were destroyed by rust again. To-day most of the 'saailande' have fallen into

210) Nehr. 5. 1841: Ber. G., 1839.
Most of the land pertaining to the institution was in fact unsuitable for agriculture and could not be improved with the means the missionaries had at their disposal.\textsuperscript{212} The Hottentots who resorted to Genadendal brought their cattle and their sheep with them and the land soon became overstocked.\textsuperscript{213} The pasturage, remaining undivided, was used communally. The missionaries tried to get the stock owners to contribute towards the wages of a cattle-hand in order that the children would not be used for that purpose and consequently miss school. But it became difficult to collect the necessary money.\textsuperscript{214}

In spite of the difficulty of keeping cattle in the Cape Colony especially at Genadendal, Genadendalers had a fairly large number of cattle. One of the reasons was that the Coloureds as a matter of prestige liked to own a span of oxen.\textsuperscript{215}

\begin{center}
\begin{tabular}{lll}
 \textbf{Year} & \textbf{1843} & \textbf{1865} & \textbf{1874}\tabularnewline \hline 
\textbf{Cattle} & 287 & 295* & 400 \\

\textbf{Goats} & 550 & 554 & 440 \\
\end{tabular}
\end{center}

\textsuperscript{211} The figures reveal that merino sheep were successfully introduced at Genadendal in the second half of the century. Genadendal's only real money product was in fact wool and the production figures for 1864-5 and 1874 are as follows:

\begin{center}
\begin{tabular}{ll}
\textbf{Year} & \textbf{Wool Production} \\
\hline 
1864-5 & 2937 lbs \textsuperscript{217} \\
1875 & 5596 lbs\textsuperscript{217} \\
\end{tabular}
\end{center}

\textsuperscript{216} There can hardly have been any wool production before the 1850ies.

Genadendal was not a favourable environment for cattle or horses. Their numbers were often depleted by droughts, floods and pests. In 1822 the stock owners lost or had to

\textsuperscript{218}
slaughter 200 out of 400 of their cattle. In 1828 it was again necessary to slaughter the weak animals because of the drought, and the conditions in 1860 affected stock owners in a similar manner.

In 1859 an epidemic caused Genadendal to lose a large number of horses. In 1854 a lung disease destroyed many cattle. In the following year a similar disease killed between 60 and 80 horses. In the year 1877 a cattle disease destroying cattle raged in Genadendal while it was suffering under the effects of a drought.

The description of the Genadendal agricultural system is sufficient proof that the village could never have subsisted from the produce of its fields, gardens and livestock alone. Therefore, although there were private enterprises in the settlement, the missionaries gave employment to some in the workshops. The missionary households provided a certain amount of opportunities for work. Some servants faithfully served in homes and in the communal kitchen for periods of 25 to 30 years. The main source of employment provided by the mission, however, were the trades set up to make the station self-supporting. These have already been mentioned in connection with the mission economy. They also played a part in the economy of the community. The cutlery, for instance, commenced in 1797, employed four men in 1802-3. In 1816 the combined smithy and cutlery had fourteen workers. Some were engaged in vending the knives among the colonists. The tannery was commenced with the special purpose of providing an occupation for some of the Coloured families in the village.

Besides aiming at earning a profit for the mission and giving employment to the residents, the industries had as their third aim the training of individual tradesmen, especially during Hallbeck’s period. Hallbeck writes that cut-
lers, smiths, joiners, wheelwrights and shoemakers were trained at Genadendal and that other tradesmen such as masons, carpenters, thatchers, sowers were encouraged.  

He also considered the teaching of writing and arithmetic essential in the school 'particularly ... for those who carry on trades on their own accounts.' The main reason for failing to establish an independent class of artisans at Genadendal was that their products found no market. Genadendal produced waggons but not in sufficient numbers to compete with financially stronger undertakings. The village furthermore did not have a large enough population to support a great number of independent tradesmen. The influx of mass produced European goods during the later part of the century destroyed the opportunities for such independent crafts as had previously existed. There had been a few tailors in Genadendal but with the introduction of sewing machines in the 1870ies the women commenced sewing their own clothes.

From the very beginning there were signs of persons who tried to make money independently by producing articles for sale even though they were only small and brooks. Hallbeck referred to wheelwrights, smiths, carpenters, masons in 1819 but he added that labourers were more useful to the institution.

The death of the sole shoemaker for the whole village is mentioned in 1826. Coloured masons and carpenters were employed in the building of the Klim church in 1835. The number of artisans was at its highest in the thirties and forties. In 1836, Hallbeck stated before the Select Committee on Aborigines:

"At the station where I live (Genadendal) one-half the population subsists by working at mechanical arts, cutlers, smiths, joiners, tailors, masons, carpenters, shoemakers, tailors and so on."  

Probably many tradesmen also owned gardens and even left the village to work for farmers during the harvest season.

After the middle of the century the number of tradesmen dropped. Occasional references to craftsmen appear in the accounts e.g. to the joiner who replaced the brick
pillars in the church with wooden posts, to the wheelwright, who lost his tools and workshop in a fire in 1848, and to the tailor and the joiner to whom pupils of the Training School were apprenticed in 1855. An Irishman set up in Genadendal as a shoemaker and gave the pupils instruction until he died in 1853. In 1856 farmers who were interrogated before a parliamentary committee accused the institution of not training artisans and asserted that there were only one or two smiths in the village. Actually it is surprising that no smiths could exist beside the smithy of the Brethren. The crafts did not disappear completely. In 1892, when the new church was being erected, carpenters from the village superintended the woodwork.

The position as far as shopkeepers in the village were concerned was slightly different. The missionaries did not encourage them especially after they had had an unpleasant experience with a certain Negrini who had been allowed to keep an inn at Genadendal in 1799. They did not prohibit them, however. Both Europeans and Coloureds are known to have carried on business in the village. In 1855 there were four independent retail traders in the village. One of these was Christian Heitz who added a wine selling business to his shop and caused much of the trouble during the 1858 elections by opening his house to the election agents. He later added an inn in which Lady Baff Gordon lived when she visited Genadendal. The missionaries would not have had any objection to sober traders conscious of their responsibility toward the community. They were against traders who exercised a bad moral influence. In 1857 a European shop-keeper from Caledon opened business, but he closed it down again when his clerk defrauded him of £90.

246) Ibid, 5. 1860; Ber. G., 1858.
A few years later another European, who was living together with a Coloured girl opened a shop in the village and added a wine selling business. This again caused disturbances. The missionaries therefore cannot be blamed for trying to protect their ward from such disorderly traders. As the missionaries ran their own shop and provided the Coloureds with wine, it was surmised that they were doing this purely for their own benefit. The attacks levelled against them on this score were found to be unjustified.

"...we found that the charges of making undue profit in the sale of goods, and of selling or distributing improper quantities of liquor, were disproved, and that the candid explanation afforded by the intelligent and active superintendent of the Moravian mission was amply confirmed." 250

Such communal work as had to be performed was usually done at the instigation and under the supervision of the missionaries. In 1796 Mihnel cut trees to bridge the rivulets. He easily gathered a number of Hottentots prepared to help without any remuneration. 255 In September, 1801 after torrential rains made set about repairing the roads with the help of all the Hottentot men he could muster. 252 The payment of a shilling for the maintenance of the irrigation furrows decided upon in 1834, was suggested by the Brethren. 253 The collective work on the drainage and irrigation system, in fighting fires, in building churches and repairing property pertaining to the congregation has already been described. Perhaps we may explain the willingness of the Hottentots to work on communal enterprises as a relic of tribal organisation, the missionaries superceding the tribal authorities in the management of collective work.

The best example of such unpaid collective work was the erection of the bridge over the Suiderend River. This bridge was commenced, with the financial help of visitors from India, 254 in 1819. A foot bridge 14 feet above the summer level of the water was completed by the end of 1820. Thirty-six Hottentots under the supervision of Brother Heinbrecht broke and transported the necessary stones and worked on the bridge in an exemplary manner. 255 Part of the wooden sup-

structure was torn away in the heavy rains of 1821.\(^{256}\) As a result the piers were increased in height. The wagon bridge was finally finished in 1823. The work had been done exclusively by inhabitants of the village under the supervision of Heinbricht. The money had been donated to the institution.\(^{257}\) The maintenance of the bridge long remained the responsibility of the village and had to be undertaken as voluntary work of the villagers.\(^{258}\) In 1851 the Divisional Council paid part of the cost of repair. In 1855 some farmers provided ox-wagons for the transport of earth. These contributions towards the upkeep of the bridge were not nearly sufficient.\(^{259}\) By 1881 the Divisional Council had still not accepted full responsibility for the bridge, although it had always been responsible for the road leading over it.\(^{260}\) The bridge thus became more of a liability than an asset to the community.

Another example of collective work was the planting of trees, commenced in 1818. The men were asked to volunteer and they responded splendidly. It was decided to sell the wood at a very low price to inhabitants who intended to build houses. The money obtained was to benefit the poor box.\(^{261}\) This plan was carried out in the year 1837.\(^{262}\)

The missionaries were in the main responsible for poor relief.\(^{263}\) Two chapel-servants were made responsible for the poor box.\(^{264}\) The inhabitants of the settlement appreciated their responsibility towards the poor. In 1866 some chapel-servants suggested the granting of maize and beans to the poor as the poor box was empty.\(^{265}\) In bad harvest years, it was impossible for the congregation to support its own poor. In 1878 the missionaries complained that the mission has to care for the poor of the congregation al-

though they are really not their responsibility.\(^{265}\)

In difficult years the missionaries also provided relief for the community. In 1822 they provided the hungry with meals. The Hottentots were taught to appreciate this by requiring them to improve the irrigation furrows and the burial ground before receiving these meals.\(^{267}\) In 1866 the Moravian institution of a love festival was used to feed the children of Berea.\(^{268}\)

The missionaries interceded with the government when supplies ran low or taxes were too heavy. In 1822 after Hallbeck’s representations the government granted rice and corn to the settlement.\(^{269}\) In 1816 Latrobe obtained the remission of the poll-tax for the poor.\(^{270}\) In 1866 intercession by the missionaries was no longer effective. They could not obtain a reduction of the road dues in that year.\(^{271}\)

In short the missionaries controlled the farm labourers’ wages and thus the whole economy of the community. This was not the case at Genadendal.\(^{272}\) They were, however, prepared to sell buchu leaves collected by the inhabitants and which had to be sold in bulk.\(^{273}\) In the difficult economic conditions of the late 1830ies, another A.G. Hettasch, tried to introduce new industries to open up new possibilities for earning money for the residents. An appeal was made to friends in Europe to donate £400 so that a castor oil industry and a silk industry could be started.\(^{274}\) In 1886 6,000 castor oil seeds were planted and a plantation of 12,000 mulberry trees was progressing satisfactorily. In April of the same year castor oil presses arrived.\(^{275}\) To-day there are hardly any relics of these late attempts at making the community self-sufficient again.

It is obvious that Genadendal played a part in the economy of the Colony, although its importance decreased from 1840. Genadendal provided a reservoir of labour for the farms in the neighbourhood. The proximity of labour to these farms increased their value in comparison with similar tracts of land elsewhere. The advantage to the farmers was that although comparatively high wages had to be paid them during ploughing and harvest, it was not necessary to provide for their keep during the off season. The Genadendalers provided their share of labour on the roads, railways and mines. Though their main export was labour they exported other products such as wool and buchu leaves and they were of course consumers of farm produce, especially during bad harvest years, and in increasing amounts, of trade commodities. The Coloureds did not prove without initiative. A resident earned his living outside Genadendal by cattle trading in 1833. In 1849 a transport rider lost seven oxen. Thus, if economic conditions seem to stagnate in the second half of the nineteenth century, the reason must not be sought in a falling off of missionary effort or in the listlessness of the Coloured residents. The tendency was the result of the general economic development of the country in that period.

Introduction

Object of this thesis has been to underline a small facet of the influence of the Missionaries on the Coloured people at the Cape in the nineteenth century; to describe the impact of Christianity on Single social unit, which was a fusion of primitive Hottentot and slave elements, subject to strung Euro-pean (white) pressure, both economic and otherwise.

What was intended as a modest exploitation of the information available has resulted in a perhaps too lengthy treatise. But it is felt that the period of a century covered, warrants as full a discussion as possible.

It is hoped that this thesis has succeeded not merely in telling the story of the mission at Genadendal, but has emphasised the significant interplay of religious, economic and social contacts, ideas and problems in the development of Coloured society at the station. For Genadendal is an example of the growth of a Christian Mission in a colony of settlement.

The sources on which the thesis is based are in the main the periodical publications of the Unitas Fratrum. The English accounts are valuable for letters and contemporary articles by the missionaries, while those in the German language contain an almost complete set of annual reports from the Brethren on the stations. The valuable diaries, extant on the majority of the Moravian mission stations all over the world, as well as the correspondence at Genadendal had to be ignored for the purpose of this thesis because of their length. His material, kept at Genadendal, is invaluable for the history of the missions in South Africa. It should be housed in a place where it will not be lost to posterity.

I am sincerely indebted to Rev. L.A. Schmidt, Rev. P.4. Schaberg, Mr. and Mrs. E. Weder and Berw. D. Wessels whose encouragement and assistance were invaluable to me in finding and selecting the material on which the thesis is based.

I.
The Origins and Thought of the Unitas Fratrum.

The Church that was to send the first protestant missionary, Georg Schmidt, to South Africa, was the Church of the United Brethren.\(^1\) This Church had its origins in the work of the great reformer Johann Huss. In 1451 a number of Brethren and Sinters formed the 'Unitas Prat ZO' at Künnewalde in Bohemia. It had a membership of 200,000 in 1\(^3\)1 but it was broken up during the Thirty Years War.\(^2\)

The remnants of this Church,\(^3\) and other German pietistic elements settled on the lands of Count Zinzendorf, at Herrnhut in Saxony. Mere, on the 13th. August, 1727, they founded the renewed Church of the United Brethren. This community was imbued with the missionary spirit. The Moravian refugees, who had left their country because of their religious convictions, were in particular the carriers of this spirit. Count Zinzendorf, their patron, shared their fervour. with his sincere and pious belief in the Saviour, his zeal for the work of God, his community spirit and his talent for organisation, Zinzendorf was precisely the man to foster the potential powers of the herrnhüters.\(^4\) Zinzendorf's aim in his own. words was: "Die Bekehrung der Heiden, and zwar nur solcher, an die sich sonst niemand machen wür- de."\(^5\) On the 21st August, 1'52, the first two missionaries were sent out from herrnhut to the Danish colony of St. Thomas in the West indies.\(^6\)

To understand the spirit of these missionaries, one Must be familiar with the spiritual atmosphere at herrnhut. The community at herrnhut was a product of Pietism,\(^7\) and contained a number of different elements.

"On the one hand, it consisted of the Lutheran inwardness of Count Zinzendorf, a man of great personal charm and attractiveness, ....his aim was to unite the true lovers of Christ in small groups,

rather after the earlier ideal of 'Luther and Spener's system of 'conventicies'. he never dreamed of the impossibility of uniting these supra-ecclesiastical groups with Lutheranism. On the other hand, the Herrnhut Community contained the sectarian impulse of the Moravian Brethren, who, having incidentally settled upon the Count's estate, became to him a 'chariot and warhorse for gaining the victory; in the process, however, his conventicle idea developed into that of a sect, organised on an exclusive basis, founded upon the voluntary principle, and upon Maturity in Christian experience, exercising powers of discipline and excommunication - a body in which lay men exercised a spiritual ministry."

These two conflicting tendencies fused, and because the Lutheran Church did not accept the 'conventicle' idea of the Count, a new Church was born of this fusion. "...its chief aim was to attain the highest possible degree of inward piety and Christ-mysticism, by means of worship, organization, and education." Troeltsch describes the qualities of the Church of the United Brethren in the following words: "The body of the communicants was to be as pure as possible; and discipline was directed to this end. The small size of the community, its system of mutual control, its independence of the State, its legal character as an 'association' (rein), its welfare undertakings which arose in order to secure its existence, its urgent desire to win souls freely to Christ through missions to the heathen, above all the endeavour after an active purity of the Christian ethic which was to distinguish its members from the 'children of this world': all this gave the Church of the Brethren - partly with and partly against its will - a certain likeness to the sects.""

The ethic of the Moravians originated in the Lutheran tradition by Zinzendorf was tolerant, but through Calvinistic accessions it was also related to Puritanism.

One of the most important elements in the teaching of the United Brethren was their mysticism.

"The Count himself was its not outstanding representative - indeed, it was Zinzendorf who expressed this type of piety in a form which was intimate and spiritual,...Zinzendorf no longer regarded Pietism as an attempt to reform the church; to him it was a voluntary association of individuals who are united with the Saviour who is spiritually present and who can be found in the word,... He transformed Opener's conventicle ideal into a form of free Christian social life, through which he and the brethren, in this community guided by providence, have been

10) ibid., p.
11) ibid., p. 720.
ranted a special relationship with the person of the Saviour. This Pictist Christ-Mysticism, and especially that of the Zinzendorf variety, always regarded all direct experience as an entirely personal and private relation with the living Saviour."

This element in a sense contradicted the sectarian organization forced on Zinzendorf by the Moravian emigrants. This personal piety evident in the writings of Schleiermacher, 'Lovalis' arm even Goethe, was of importance outside the Church. It is manifested in the practice of making and reading reports on the inner life of individuals. In their missionary accounts this trait in their ideology is one of the most noticeable. Their influence on the rest of Protestant Christianity is greater than is generally realised. Their famous book of Biblical 'watchwords' is printed in twenty-six different languages and 300,000 copies are sold annually. The membership of the Church is only 210,926.

The United Brethren have similarities with other 'sets' of their period; such as the Quakers and the Baptists. In other directions, however, the relation between Moravian mysticism and ecclesiasticism is most obscure. Zinzendorf always considered himself in agreement with Lutheran theology. In reality, however, he only agreed with certain sections of Lutheran doctrine. With the ecclesiastical and sociological, of Lutheranism he certainly did not agree.

Actually there were closer affinities to the Calvinists than to the Lutherans. 'This is one of the reasons why they found favour with the Calvinist colonists at the Cape. Their sectarian ideals led them to their belief in the 'dignity of work.'

the economic results soon appeared in the shape of an excellent and increasingly successful business life, characterized by integrity and frugality."

As the communities had to meet their own expenses and consisted mainly of poor people, this element was strengthened. By these methods they also paid for most of their missionary work.

The missionaries, who case out to the cape in 1792 were, therefore, of the artisan class and aimed at creating a self-sufficient community at Genadendal. The Moravian communities did not provide all the lands for the missionary work. Throughout the Nineteenth Century this 'small but energetic Church' had *fan* outside sympathisers. Financial aid came from zany quarters and societies of friends of the oravian Missions were formed in a number of Euro-pean countries and America. In 1817 the London Association in aid of Moravian Missions was formed when contributed substantially to the funds of the mission until the end of the Nineteenth Century. Besides, the missionaries at Genadendal report the arrival of aid in kind from sympathisers in England and the Continent.

Earl Russel is reported to have said that the constitution of the church was the most skilfully and wisely balanced of any with which he was acquainted. It combines both democratic and aristocratic elements. It is ruled by bishops, appointed by the supreme legislative body, or, when that is not in session, by the supreme executive body. The legislative body, consisting of the General synod of the Church, has supreme authority. This body is convoked infrequently. When it is not in session a Directory acts with full powers. A special commission is appointed jointly with the Directory to deal with the affairs of the missionary work. To-day the various national branches of the Church care for certain mission fields, although there is mutual help when necessity arises.

The Moravian have always been very careful in the selection of their missionaries. Besides, the number of missionaries in proportion to the total membership of the Church is very lase. In 1903 Stewart estimated it to be one missionary for every sixty communicants, whereas other Chris-tian Churches average one missionary for every 3,703

communicants. They never seem to have lacked zealous missionaries prepared to preach the Gospel in the most forbidding regions. The list of applicants is scrutinised by the missionary department; the applicants are free to "accept or decline" the appointment, and the) may choose the field they prefer. 27

The missionaries of the United Brethren did not receive any special training until well into the second half of the Nineteenth Century. The emphasis was laid on the willingness of the applicants to serve as missionaries. As a result few really learned men went out into the field. Often they did not learn the language of the people they were preaching to.

Infractions given to the missionaries were alas in saner terms and were meant to be corrected and supplement by actual experience in the field. Only in 1636 were more precise instructions worked out with particular reference to the different fields. The missionaries were instructed to do whatever they did "in the name of God". They were not to be held up to the halo congregations as martyrs. They were to work together in a spirit of brotherly love. Special care was to be exercised in the making of converts and in giving them positions of responsibility. The bringing of converts to Europe was in the beginning strongly disapproved of. 29

Their attitude towards the heathens was such that they did not try to eradicate all non-Christian customs. They allowed such customs as did not directly interfere with Christian principles to be continued. They were for instance, prepared to baptize a polygamist and allow him to keep more than one wife but they did not allow polygamy among their ordinary converts. Baptized polygamists, however, were debarred from posts of responsibility in the congregation. The baptizing of polyandrists on the other hand was prohibited.

They found by experience that the best method of influencing the minds of the reaction was to preach to them simply on the suffering and death of Christ for the sins of mankind. They found that this approach had far greater

effect than teaching about God. All the heathen seemed to have some notion about God, but they knew nothing of a merciful God and this appealed to them. After 1844 this method of approach of the heathen was followed universally by the Brethren.

Zinzendorf’s early airy as the gaining of a few select converts for the Lord and creating a Christian elite among the heathens, this early alle of the Brethren was modified, o. Leg to the fact that They made move converts than expected. he idea that communities on the lines of the original community at herrnhut should also be formed among the heathens was introduced. in 1869 the idea of independant churches developing,; out of these communities was formulated by the General Synod. 32)

Artisans and traders have always accompanied the actual missionaries. In the beginning most of the missionaries were artisans ad traders. Although the proportion of learned men co the traders and artisans has increased, the practice of sending, out la, brethren as _raters an arti-

sans has not ceased. At first the line between lay brethren and ministers was not drawn very clearly. he lay brethren cook part in the actual preaching of the Gospel and care of the congregation whilst earning an income for the mission station. e tendency been to draw this distinction more clearly. missionary in the service of the society was allowed to work for private profit or own private property. 33) the Sister, who went out as the wives of the
directly concerned in the mission work. Ihey had thus to be carefully selected as Nell. A single missionary always Lad a wife selected for him by the mission directory at home. 34)

in their relations with tee colonial governments the Brethren followed the principle enunciated in the Bible: it every soul be subject unto the higher powers. For there is no power but of God: the powers that be are ordained of God. (Romans, 13. v. 1.) They did not attempt to influence the policy of the government directly, but indirectly they hoped twat their influence would ameliorate the native policy a# of the colonial governments and that government would learn

1) Ad. Schulze, Abriss, p. 60; J. Stewart, p. 89.
34) Ad. Schulze, p. 56.
to appreciate Christianisation. This quietist attitude was probably a result of the fact that, unlike cue English missionaries, most Moravian originally came from absolutist states of central Europe.

In their dealings with other denominations Zinzendorf instructed the missionaries to let their converts know as little as possible about the divisions of Christianity and to be impartial when their converts did notice these divisions. In the beginning governments and other Churches showed marked opposition, but as they learned more about the United Brethren this attitude changed. During the nineteenth Century they were on friendly terms with missionaries of other denominations, and colonial governments in many cases favoured them. With regard to the European colonists a similar development took place, more gradual and less comprehensive.

were always close contacts between the missionaries and the congregations at home. Frequent visitations of the mission field by important men of the General Synod were undertaken. Regular reports the missionaries sent home and their aide circulation made the congregations aware of the developments in the missionary fields. Books were written about the work in foreign fields and some of Zinzendorf hymns deal with the missionary effort.

She missionaries of the United Brethren, were interested in the genuine conversion of the individual rather than in mass conversions; they were practical, persevering and zealous. The most important reason for these laudable qualities was their fervent religious conviction:

...they have some secret of religious life ... some ideal in their Christianity towards which they work without saying touch about it."

unless the full significance of this factor is realised, it will be difficult to understand the self-denying cork of the Moravians in South Africa.

Ziegenbalg and Böving, two German missionaries on their way to India, tried to arouse European Christendom to the degraded condition of the Hottentots without much success. Eventually two Dutch clerics, van Alphen and de Bruyn, asked Zinzendorf and the Herrnhuters to send a missionary to the Cape.¹

The man selected for this task, Georg Schmidt, was born in 1709, the son of Moravian peasants. Hearing of the United Brethren, he journeyed to Herrnhut. Here he case to be "re- cognised as a young man of exceptional piety and devotion." ² He was sent to Bohemia where he suffered six years imprisonment for the sake of his religious convictions. Zinzendorf chose him as the first missionary to the Cape.³

Immediately after the request for a missionary at the Cape had arrived in Herrnhut, Schmidt proceeded to Holland where he arrived in arch, 1735. He at once began to learn Dutch. Zinzendorf's friends procured the necessary permission from the council of Seventeen. The Council insisted on a religious examination of the prospective missionary during which Schmidt "made a favourable impression upon the divines."⁴ When he had satisfied the clerical commision as to his faith and character, the Court of Directors gave their approval, granted him a free passage to the Cape and provided him with an introductory letter to Governor de la Fontaine who was instructed to "grant him every help and assistance in this good purpose."⁵

On the 9th July, 1737, Schmidt's ship 't Huis te burg arrived in Table Bay. He immediately went to call on the new Governor Kervel. The Secunde, captain RhGenius, a born Berliner, ⁶ invited him to stay at his home. ⁷ The inhabitants of Cape Town were not over optimistic as to his

⁵ ibid., Chapter vii.

success in converting the Hottentots. 8 -Le Council of Policy likewise doubted that he would be successful. His arrival is recorded in he minutes of this body in the following way:

"And... by the vessel 't Luis te Rensburg" there has come to land here a certain person ranted Georg Schmidt, with the purpose - if that be possible - of converting the Hottentots from Heathendom to Christianity, all possible assistance shall be rendered to the aforesaid person for the prosecution of that pious work and the attainment of its good object."

Schmidt was detained in Cape Town for a considerable period. During this time he made the acquaintance of the clerics in Cape Town and of the sincere Christians. 10) The Dutch pastors, Le Sueur and. Kok, raised objection to his performing the sacrament of baptism, but whether they informed him that pastors of the Dutch eformed Church had the sole right to baptise is hard to say. 11)

In the beginning of September, as opportunity for his journey into the interior presented itself. Rampen, a corporal in charge of the Company's post at Zoetenelksvallei, was returning to duty. 12) The Governor supplied Schmidt with provisions and instructed am en to give him every assistance. 13) Two Hottentots, Africo and Kibbodo (Kibido) travelled with them. The party arrived at the Company's post, on the 13th September, 1737. 14) Schmidt first settled at hartebeestkraal near the Company's post at Zoetemelkvallei, se immediately began building a house. Some of the soldiers and the Hottentots helped him; the latter realised that he had not come to take away their cattle or their land. The house was soon completed, but Schmidt was to stay in it for only seven months. A number of Hottentots lived near the house, among them Afro.

Schmidt soon started the work of preaching the Gospel.

15. to them. He also attempted to teach them agriculture so as to make them live a settled life which would favour his work. His description of the Hottentots is not very favourable.

The Hottentots are of a phlegmatic disposition, and sleep much in the daytime. In a moonlight night they amuse themselves with dancing, caper-cutting, and singing, and at the same time watch over their flocks. (These flocks were often attacked by lions and leopards.) Their clothing consists chiefly of two sheep-skins sewed together and cut into 6-9 shape. These are kept greased and tied around their waist; but the common story of their wearing cheeps entrails round their arms and bodies is without foundation. Indeed the women often wear thongs cut out of bull's hide round their legs, but never entrails. Their riches consist in oxen, cows and sheep and their chief food is milk and boiled meat. Instead of bread the eat wild root, which they also now and then boil. They neither plant sow nor cultivate the ground, butrove with their cattle from place to place, whenever they can find the greatest quantity of provender. There they set up five or six tents under the control of a captain. They have neither divine worship or any ceremonies, and seem to believe nothing but that there is a great Lord of all, whom they call 'Iuileha, and a devil called 'a e a, of whom however, they do not appear afraid."

that the Hottentots near the post still lived in a nomadic state and that they still dated cattle and sheep. The method of teaching the primitive people the Gospel would not have found the approval of modern missionaries, but the Hottentots listened to him perhaps because this was the first European who wane to help them. visited their fires, distributed tobacco among them and talked to them. Later he tried to learn the Hottentots language. This he found impossible on account of the numerous clicks. Le therefore decided to teach them Dutch so that they could understand. In October, 1737 he started a school for this purpose. He prayed with his pupils before and after the lesson and on Sundays he read them the Bible and spoke to them of the Saviour.

he proximity of the Company's post soon proved to be a drawback on account of the soldiery posted there. In February, 1738 he was 'given to understand' that he was too near the post. Pais means that having drawn lots he saw that

15) Schmidt en sy Opvolgers, p. 8.
God wanted him to leave and showed him where to go. He moved to the opening of the Baviaanskloof where Genadendal now stand. Eighteen Hottentots, who had taken a deeper interest in his teaching, accompanied him. The acting Governor Swellensrebeld, approved of this and allowed Schmidt the use of the land. Schmidt's friend and patron, Rhenius instructed the corporal to assist him again in building.

A beginning was made in what Schmidt called a 'desert place', on the 3rd April, 1753. Soon the missionary resumed his activities, apparently without much success. Willem, one of the Hottentots, alone was genuinely affected and pleaded with his people in the Hottentots language. Besides Willem, Kibbodo and Africo, seemed to be more interested than the rest.

The Sunday services were attended by between 35-50 natives.

In November, 1740, Scheidt wrote to Herrnhut about his success and his problems. The people who come to the meetings morning and evening tended their cattle and worked during the day. The school he had established did not last long as "these people do not love perseverance," and the task of teaching them "Low Dutch" was well neigh impossible. Yet he taught them to say a prayer before the meetings. His congregation consisted of 10 men, 10 women, 7 boys, and 5 girls, who were divided into classes. Fifteen could read the New Testament. He reminded the Brethren that he was alone and urgently needed an assistant. He had to contend with three major problems. First, there was the language barrier. Secondly there was the fact that the Hottentots including members of his congregation were prone to drunkenness. Even Africo and Kibbodo fell victims to this vice.

Thirdly, the Hottentots were still nomads and trekked around with their cattle. Once, when his wards had let their cattle stray onto the sown lands and had, not remedied the master when asked to do so, he discontinued conducting services and the school as a punishment.

The attitude of the colonists towards Schmidt's work is...

25) Schmidt en sy Opvolgers, p. 10.
difficult to ascertain. probably most colonists were indifferent towards this remarkable man. His work did not affect their labour supply as that of later missionaries did. Live Dutch people visited him in November, 1738 and gave a favourable account of him in Cape Town. Georg Schmidt did not confine his work to the Lottentots, but also preached the Gospel to the colonists. Besides Kampen he also converted the worthy corporal’s successor, Martinsen, and maintained contact with religious people at Cape Town.

In 1738 Kulenkampf’s famous pastoral Letter arrived which branded the Herrnhutters and Zinzendorf as heretics. It had a detrimental effect on all the missions of the United Brethren in Dutch colonies. Zinzendorf immediately replied. Nitschmann and tiler, two missionaries of the United Brethren on their way to Ceylon in 1739 carried a letter containing the count’s refutation of Kulenkampf’s charges. Pa it was signed by the members of the Glaesis of Amsterdam, it eased Schmidt’s position for some time.

Schmidt had fairly close contact with the community in Herrnhut. Zinzendorf wrote to him reminding him of the importance the Brethren attached to the death of Christ.

The visits of Nitschmann and Eller, who were at the Cape on their voyage to and from Ceylon strengthened the lone worker in his purpose. He community at Herrnhut twice unsuccessfully attempted to send him an assistant. Zinzendorf then sent him a regular letter of ordination empowering him to baptize. Schmidt as overjoyed when he collected the letter at Cape Town in March, 1742. Ultimately this new power confirmed upon him was to prove his undoing.

On the return journey to Baviaanskloof, Schmidt baptized Willem in a rivulet, “in the name of the Son who has died for us and in the Name of the Father and in the Name of the Holy Ghost.” He gave Willem the name of Joshua. Later at Baviaanskloof he baptized four other members of his congregation whom he considered worthy of this important step.
Later they slipped back into their old ways and absented themselves from the meetings.

At Cape Town the baptism astonished the populace and aroused the Dutch Reformed clergy. The ministers there sent for Joshua and Christian (Africo) and examined them. They were surprised at their knowledge and sent them back exhorting them to remain in obedience to their teacher and what he had taught. They also summoned Georg Schmidt himself to the Cape and he was interrogated by the clergyman and the Council of ruler. He remained firm about his right to baptize. The Council warned him that he could no longer baptize until the authorities in Holland had given a decision.

Three Dutch ministers at the Cape assembled in Cape Town and wrote to the classis of Amsterdam, to which the Dutch Reformed Church at the Cape was affiliated. They formed the Classis that Governor Swellengrebel had prohibited Schmidt from carrying out any further baptisms. They maintained that Georg Schmidt was not entitled to teach as he did not conform to the rules of the National Christian synod, nor had he been examined by this body. They pointed out that he taught the faith of the Herrnhut sect. His authority to baptize had been conferred illegally by a written Bull or Act of Count Zinzerulor and not by the Classis.

Hottentots had been baptized irregularly, not before a full congregation. The baptized Hottentots were not fully versed in the principles of Christianity and, as Schmidt had not been ordained by the laying on of hands, they could not partake of the Holy Communion immediately after their baptism as required by the Dutch Reformed Church. They requested the Classis to send Krankenbezoekers or schoolmeesters to look after the interests of the Hottentots in place of Schmidt.

The answer of the Classis intimated that the Synods of North and South Holland had pronounced the baptisms of the Herrnhutters out of order. They promised to send out suitable men "to instruct the unfortunate Hottentots and others

e r 1 i g i o was as yet too strong for the
Classis to allow a missionary of a denomination not their
own to preach at the Gape. besides, the Company feared
that a non-reformed church in the Colony would cause dissen-
sion.
without waiting for the answer of the Classis, Schmidt
informed the Brethren that his position at the Cane was un-
tenable and the best course of action would be for him to
return to procure more favourable conditions from the autho-
rities in Holland. 9) In August, 1743, he received letters
from Herrnhut advising him to return. Entrusting his gar-
den to Christian, Schmidt took leave of his small
congrega- tion on the 30th October, 1743.
he was granted a free passage to Holland by the Coun-
cil of Policy. Swellengrebel, Rhenius and others gave him
testimonials of good conduct. he Governor promised to pro-
tect the Hottentot community at Baviaanskloof. Schmidt left
Table Bay on the 4th November 1744 and arrived in Texel three
months later.
Aile congregation left at Baviaanskloof consisted of
eleven married couples, eight single men, nine beys and eight
girls. his small community of forty-seven Hottentots
apparently held together for the first few years. 41
Schmidt's and Zinzendorf's subsequent efforts to obtain
the permission of the Council of Seventeen for Schmidt's re-
turn were unavailing for two reasons: the denominational
jealousy and deference to 'public opinion' in the Colony. 42
Martin Schwabler, a former servant of the Com-
pany at the Cape, decided to continue the work. he was one
of Georg Schmidt's European converts. Schwabler left Europe
in 1748, ostensibly to seek re-appointment with the Company,
but in reality to proceed to Baviaanskloof. 43
he reported that the community at Baviaanskloof longed
for their old teacher. 44 Schwabler did not leave any traces

on the life of the community* tie died during an epidemic in 1756. This was reported by Wynstrauch, another of Schmidt's converts. He also reported that the congregation held together till Joshua (Willem) and Christian (Africo) died in 1755 or 1756, but in 1758 Baviaanekloof was deserted. In 1760 some Indian missionaries of the United Brethren were assured in Cape Town that the Hotentots had not forgotten Schmidt and that some of the baptized were still alive. ) Schmidt , back in Germany married and continued in the service of the Church of the United Brethren, he died on the 1st, August, 1785, in the hour that he had, set aside to pray.46

United Brethren did not forget its South African station. In 1789, the Synod of the United Brethren decided to renew its work at the Cape. ) the attitude in Holland towards the Unitas ratrum had changed, with the diffusion of their ideas. A congregation of the United brethen was established at Zeist, and he authorities began to appreciate the value of their work in the colonies.48 ) At the Cape the attitude towards the missionaries, especially among the clergy had undergone a change as well. Iwo young reformed ministers, an tier and Vos, brought the 'missionary spirit' out to the Cape with them and conducted services for the Hottentots. Thus when Bishop Michel xxx visited the Cape on his return from India, he realised that the tide had turned.49 Afton the Lutherans had received permission to form their own congregation it would have been illogical for the Company and the clergy further to resist the establishment of a 'Lutheran' mission.50

In 1789, the 'United Brethren petitioned. the Company to permit them to send, three Brethren to the Cape. they were to be permitted to choose a suitable location in the interior under the protection of the Company where they would be able to administer the sacraments, preach the Gospel and form a congregation. they farther petitioned that they should have the power to appoint and dismiss the missionaries. The Brethren wave to sail in a Company's ship at a reasonable price. They promised to avoid everything that would cause resentment among the established churches at the Cape. this pea.

tition was granted under three conditions. The number and names of the missionaries should be made known to the Company, they were not to settle in a place already occupied by a Christian congregation, and the missionaries should not be dismissed or appointed without the knowledge of the Company. These conditions, fair in themselves, were open to varying interpretations. The second condition was exploited by certain persons in an attempt to drive the missionaries out of the Colony into the interior. It was under these conditions that Karsveld, Schwinn and Kühnel resumed Schmidt's work at the Cape.
The century of missionary work in Genadendal from 1792 to 1892 can be divided into four periods. The first period of initial difficulties and of consolidation, stretches from the first arrival of missionaries to the visitation of Brother C.I. Latrobe in 1816. The second period, one of vigorous expansion and improvement commences with the stimulus given by the visitation of Latrobe and ends with the death of the beloved and energetic organiser, Bishop Hans Peter Ballbeck in 1840. The third period is characterised by the increasing opposition of both the inhabitants at Genadendal and the Colonists to missionary work. It extends from 1840 when CL. Teutsch became Superintendent till the 1860ies when Künnel became Superintendent and Berea was founded. The fourth period ushers in developments making for the independence of the Church of the United Brethren in South Africa especially after the division of the mission field into an Eastern and a Western province in 1859. It really only comes to a close in 1922 when the first Church Conference for South Africa West was held.

First Period.
The three first missionaries, Hendrik Marsveld, from Gouda in Holland, Daniel Schwinn from Erbach in the Odenwald and Johann Christian Kühnel from Ober-Seeiersdorf in the Lausitz were all ordained deacons of the Church of the United Brethren. They arrived in Cape Town in November, 1792 and were cordially welcomed by all those sincerely interested in missionary work. They stayed in the home of one of these friends. The government advised them to proceed to the place where Schmidt had worked as there were still Hottentots there. They proceeded with Teuniseen, the commander of the Company's post Zoetemelksvallei, into the interior. On the 24th December, 1792 they reached Baviaanskloof. They found
ruins of Schmidt's house and some of the fruit trees he had planted.\textsuperscript{5} A little further away they found the only remaining baptized convert of Georg Schmidt, Old Lena or Magdalena. After greeting the missionaries with the words: 'hank' be to God." she produced a Dutch New Testament concealed in a leather bag covered with sheepskin, in parch a new building at Baviaanskloof had been erected by the Hottentots assited by two Coloured neighbours. The missionaries then roved to their new home from Zoetemelksvallei.

They immediately commenced teaching the Hottentots and they had an attendance of twenty—five on the first day. It was not necessary for them to go out and seek dottentots.

In July, 1793 the first baptism took place. At the end of 1794 the congregation consisted of thirty—six baptized persons.\textsuperscript{7} The only major setback at this time occurred in 1795 when the missionaries were ordered, by the insurgent leader Pisani to leave Baviaanskloof. They retreated to Cape Town, out soon returned and recommenced their work.

The British government was generous in the permission and help it gave for the building of a chapel at Genadendal. The first temporary chapel was dedicated in arch, 1796. In the years 1799—1800 the church, which was in use till 1692 and could cover over a thousand persons, was erected.

Before this, reinforcements had been sent out. Brother and Sister Kohrhammer arrived in May, 1198, and thus the first woman missionary commenced work at baviaanskloof. Two years later, Schwinn returned from a visit to Germany to, with his wife, Brother and Sister, and the two brides of Marsveld and Rose, who had been a missionary in Labrador, was sent out to cope with the precarious financial situation, which had arisen on account of the many visitors at Baviaanskloof and Schwinn's confused bookkeeping. Lien he arrived there we e about 130) at the station. Rose was an efficient and vigorous man. his early death in 1805 was a great blow to the mission.\textsuperscript{9} Xle period of Batavian route brought steady improvement at baviaanskloof and in 1806, Governor Jaiseens suggested the name Genadendal which has since been the :sane of the first missionary station at

the Cape. The permanent British administration of the Colony since 1806 was sympathetic. Caledon suggested a new station at Groenekloof in 1808. Kuester and Schmitt had just arrived and there were thus enough missionaries to start the work there.\textsuperscript{10} After this, there followed a regular flow of missionaries into the country until in 1611 there were six married Brethren at Genadendal alone. \textsuperscript{11} N\textsuperscript{r}thammer died in June, 1611 and Kühnel in April, 1613.\textsuperscript{12}

The measure of the Brethren's work in this period can be gauged from the numbers quoted in the diary for 1612. The congregation then consisted of 676 persons, of whom 296 were communicants, while there were 1073 persons living at Genadendal. \textsuperscript{13}

Second Period

The visitation of Latrobe, the society's secretary in London, in 1816 had a stimulating effect on the mission. It was during his visit that the overseers' or 'opziener's' conference was established and the Rules and regulations formulated which were to play so important a part in the secular administration of Genadendal.\textsuperscript{14} It was due to his insight that the able Hans Peter Hellbeck was entrusted with the task of leading the mission in South Africa.

Hellbeck reached Genadendal early in 1818 and immediately commenced labouring, vigorously for the expansion of the mission. Four more stations were founded during his period of office (1818), Him (1824) - to relieve the congestion at Genadendal - Shiloh (1823), and Clarkson (1839).\textsuperscript{15}

What concerns us here are the improvements which Hellbeck initiated at Genadendal in the educational and administrative field. He was mainly responsible for the establishment of the infant school (1831) and the training School (1838).

During his term of office the rules and regulations were revised and approved by the Governor. In the main they remained unaltered from 1827 till 1892. In 1638 the emanci-
pation of the slaves affected Genadendal. Hallbeck was responsible for the admittance of many freed slaves. Au steered the mission of the United brethren through the troubled waters of the days of Dr. Philip in such a manner that there were few if any, outbursts by the colonists against the Brethren, although Hallbeck personally held much the same views as Dr. Philip. 17) Hallbeck also showed his vision by commencing services at outposts. 18) with the death of Hallbeck on the 25th, November, 1840, a period of steady, vigorous improvement in Genadendal came to an end. The congregation at The end of 1840 numbered 2,187 souls, of whom 693 were communicants. 19)

Third Period.
Brother C.L. Teutsch took over Hallbeck work and inaugurated a period of consolidation. During his time the congregation gradually increased until ac his death and the succession of Kölbing in 1852 the number of 3,000 had been reached. This seemed to be the saturation point of Genadendal for thirty years later the number was approximately the same. 20)

Doubts as to the legality of the Mules and regulations, opposition of a section of the residents to the missionaries and the effects of the increasing power of the colonists in the Cape government begin to make themselves felt. 21) into this period als falls the visitation of Genadendal by Bishop Breutel, who arrived in 1853. 22) In 1858 Genadendal was granted a legal title recognising it as a 'grant station' held in trust for the Coloured inhabitants by the Superintendent. 23)

Fourth Period.
With the succession in 1861 of Brother F. * Kühn as Superintendent, 24) Genadendal was fairly set on the road towards independence from the omission Directory in Europe.

17) deport from the Select Committee on Aborigines (British Settlement) together with Minutes of Evidence. (hallbeek)1836. exs. -, Aces. Hallbeek, 9th Jul., 1834. Nchr. 5. 1841: Ber. G., 1339.

Men Kühn departed for Europe in 1865 to take up an appointment on the mission Board, Bechler succeeded him as Superintendent. He continued the policy already commenced in the previous period and which Kühn had accentuated in the foundation of Berea, viz., that of decentralisation. The work at the outstations of Twistwyk, Greyton and Kopjes Kasteel now became even more important. Towards the end of this period the missionary policy had to adapt itself to the emergence of an industrial migratory labour force. The missionaries followed the workers from Genadendal into Cape Town and up and down the railway lines. With a supreme effort the congregation was able to find the funds necessary to erect a new jubilee Church, inaugurated by Bishop Buchner during his visitation in March, 1893. The economy of the community at Genadendal was very precarious in the last decades of the century and the missionaries were desperately trying to find new 'industries' for the community. The division of the South African mission field into two separate provinces paved the way towards the independence of the Moravian Church in the Western Cape.

This brief historical summary will now be supplemented by a survey of the Moravian methods and the results they achieved.

The aim of the missionaries at Genadendal was to Christianise the Hottentots and this implied civilising them as well, for - in their opinion - the converts had to be gathered together in a community to receive effective religious instruction. Within a Christian community only was it possible to create the most propitious conditions for their wards to experience a truly personal and individual relation to their Saviour. The methods the Brethren used to achieve this can be grouped under three major heads, the religious care for the individual, the inculcation of Christian principles upon the community, and the actual preaching of the gospel to the inhabitants as a group. After an exposition of these measures the various obstacles hampering

30) L.R. Schmidt, Die Broederkerk, p. 11-12.
31) Select Committee Aboriginese, Evidence, hallbeck, 1836.
their effectiveness and the factors facilitating the Christianisation of the detribalised Hottentots will be described. Perhaps the most conspicuous element in the work of these devoted Brethren is the conscientious care they lavished on the individual convert. They have been criticised for this and it is said on account of this that their converts lack strength of character. As soon as the individual joined the community he was immediately put into his station in the hierarchy of church privilege. The lowest rank was occupied by the 'Dew People or *ehrlinge. They comprised people who had been permitted to reside in the institution but were not yet converted. They were visited individually by the missionaries. As soon as the missionaries were of the opinion that they sincerely wished to embrace the Christian faith, they were considered as candidates for baptism. During this period they underwent special instruction and their motives were continually investigated by means of the so called 'speakings'. Great caution was exercised in selecting candidates for baptism, as the aim of the missionaries was to gain sincere converts. Thus by January 1799 the missionaries had only baptised 114 adults and 85 children, out of a population of nearly 800. After the missionaries had satisfied themselves that the candidate truly merited baptism, the test of determining by means of drawing lots, whether Christ approved of the baptism, was carried out. This method was used to determine advancements in church privilege in the beginning. General Synod of 1818 no longer considered the drawing of lots to be essential for important decisions. Children of baptized parents received a different treatment. The Brethren were not opposed to infant baptism. But since Christian children were considered unable to benefit by religious instruction, they received the necessary instruction later. When the Brethren considered the baptized to be ripe for a

further advancement in church privilege, he was admitted to
the class of the Candidates for Communion. Here again he
received special instruction.\textsuperscript{47} There were speakings with
him which the missionary and his wife, who reviewed the can-
didates spiritual life with him reported to the conference
of missionaries.\textsuperscript{41} When the candidate was considered suf-
ficiently advanced in his experience of the Saviour, he was
permitted to partake of the Holy Communion.\textsuperscript{41} When the converts had reached this final stage they were by no means
exonerated from the strict supervision of their thought and
actions. They were still expected to attend the 'speakings'.\textsuperscript{41} The main criterion for the advancement from one
rank to another was not the knowledge of Christian prin-
ciples or some other external attributes, but the sincerity
of the individual's faith, \_there are instances of per-
sons permitted to attend Communion although unable to speak
Dutch.\textsuperscript{41}

The missionaries were always prepared to give individ-
ual advice on spiritual matters and the converts with prob-
lems were expected to interview them and they did so.\textsuperscript{45}
The first three Missionaries were overwhelmed with such vi-
sits as all, who attended the services, felt that they had
to see the missionaries individually after each service, but
this was stopped in ay, 1795.\textsuperscript{46} Regular meetings with the
various classes were, however, organised in which the empha-
sis was on conversations between the missionaries and the
individual convert, known as 'Speakings'. Such meetings
were even organised for the members of the congregation who
had been deprived of their church privileges but were still
living in the institution.\textsuperscript{47} Besides 'class speakings'
there were fairly frequently so called 'general speakings'
when every member of the congregation was spoken to indi-

In the beginning it was possible to reach every member of the congregation in this manner but in 1857 only about a thousand attended. The 'speaking' classes were divided according to sex, the Brethren speaking to the men and the Sisters to the women. When Sister Kohrhammer arrived in Lay, 1798, she immediately took up the duty of speaking to the women of the congregation individually. The missionaries visited members of the congregation, especially when these requested it. They were thus often present at the death of members of the congregation.

As the number of inhabitants increased it was found necessary to adapt this stem, although the principle of strict individual care was maintained. In 1658 the community was divided into a number of sections and a Brother and his wife were made responsible for each section. By this method more frequent visits to individuals in their homes could be made. In December 1666 this system was further improved upon. Genadendal was divided into five districts, to the duties of a Brother and his wife in charge of a district, which so far had been restricted to visiting and comforting the sick was now added the responsibility for conducting the 'general speaking' as well as the class 'speakings'. The reform increased the amount of individual attention received by (teen member of he congregation.) In the individual care of souls the missionaries to some extent made use of assistants from among the inhabitants who were called chapel-servants. They had the duty of admonishing individuals and reproving them for blameworthy conduct. They had also to visit the sick. Hallbeck considered these untrained assistants of no great value. In spite of hallbeck's opinion untrained assistants continued to be employed. In 1680 women Bible readers were appointed with the special duty of taking the fiord of God to the sick and aged. They were further expected to visit people who had left off attending the services. The missionaries, however, had no...
greet faith in the success of this measure.\textsuperscript{55}) Another instance of untrained assistance was of more promise. Between 1843 and 1694, Stephan Prins, a chapel-servant, journeyed up and down along the new railway line between Worcester and Kimberley, to care for the souls of the Genadendalers who had found work there. ark Absalom volunteered to continue the work after his death.\textsuperscript{56})

The Brethren realised that it would be necessary to teach the Hottentots and Coloureds to run their community on Christian lines, if their painstaking work with individuals was to have any lasting effect. For this reason the congregation was divided according to the station of the various individuals into groups or 'choirs' of children, young men, young women, married people, widows and widowers. Separate meetings were held with these groups and the general speakings were based on these divisions.\textsuperscript{57}) in the meetings the missionaries instructed the various groups in the principles according to which they should lead their lives in a Christian family and in a Christian community. Parents and guardians of children for instance, were admonished when they had not fulfilled the obligations towards their dependents.\textsuperscript{58}) Special care was taken in exhorting the single women as they were considered to be particularly liable to temptation.\textsuperscript{59}) These choirs held group festivals, every year. The accounts mention tile children's festival fairly frequently.\textsuperscript{60}) Before each festival there was usually a 'speaking'. They could be postponed or cancelled as punishment of a certain group. They served as an inducement for children to come to school as only those were permitted to take part who had attended school. The men were sometimes persuaded to perform work for the congregation after such a festival.\textsuperscript{61})

A further method of inducing the community to live according to Christian principles was the formation, in the middle of the Nineteenth Century, of societies such as the Missionary Association, Bible Associations, and Young Men's and Women's Associations. The Missionary Association tried to induce its members to support missionary work outside Genadendal with both prayers and pence. The Young Men's and Women's Associations were formed with the aim of strengthening the Christian character of their members and of imparting useful knowledge. There subscriptions were to be used for the purchase of books and the support of the sick and needy. All associations were accepted with a certain amount of enthusiasm at first, but interest in them soon waned. For instance, the membership of the Missionary Society, dropped from 332 in 1845 to 263 in 1848 because their subscriptions were not paid. In 1866, when it is mentioned for the last time its membership was 37. The Young men's and Women's Associations had, like the Missionary Association, a low subscription of three pence per month. They are mentioned in the accounts only once, at their inception; hence they cannot have existed for long and had to be re-established in the twentieth Century. The associations were an attempt to enrich the Christian life of the Inhabitants of Genadendal. Two reasons may be suggested for their failure. They were thrust upon the members by the missionaries, not spontaneously developed; and the spiritual life of the community, seems not to have been developed enough to ensure their survival. Here are two associations, however, which still exist, the two burial societies. They were formed in the last decade of the Nineteenth century and the first decade of the Twentieth Century.

In 1802 the congregation was asked to contribute a certain amount towards some articles needed for the proper performance of divine service. The first subscriptions were at the rate of one shilling per person per annum. At first the members of the congregation were so eager to pay that a

shilling had to be liven to the needy cut of the poor box so that they too were able to pay their contribution. The missionaries observed that:

> support a common interest, which surely all must feel, in providing the means of meeting together to worship God in fellowship."

14 these means the missionaries attempted to make the congregation realise that it was a unit and had a corporate Theon-sibility.

also ensured Lust members came to feel a responsibility for the church building, the centre of corporate life of the congregation. he need for a church was felt very soon but only after the Cape was occupied by the British in 1795 could a chapel and later a fairly large church be erected. the church, as all the buildings on the 'werft', was erected with the help of the Hottentots and was comple- and consecrated in January, 1800. it is described by a visitor in the following words:

"...die Kirche, ein einfaches, missives Viereck von etwa 100 Fuss inn adrat, an weichen jedoch

Dach nicht gefallen, wo- durch man dem Gebäude eine ausstännde höhe hat geben wollen. Innen stehen zwei -eihen Menke and ein einfacher Predigtstuhl. kilos so wie die wande, die Pfeiler, Thüren und die Emporkirche von der grössten Einfachheit, aber derb, in guten Verhältnissen und reinlich gearbeitet. money for a new church. With the help of friends from overseas the sum of £3100 was raised by 1893, of which the congregation itself had collected £1225. It also net the debt of £338 which remained after the church had been built. Brother Hettasch was both architect and supervisor of the building operations. He worked with the help of two Genadendal carpenters, a German mason, a German ship's careenter, and about 40 labourers from the villa who came every day. The church which seats 1400 people was inaugurated by the visiting Bishop Buchner on the 15th, March, 1693.

Frequent services conducted within the church, were based on those traditional in the congregations of the United Brethren. In March, 1793, the first instructions in the scriptures were inaugurated commencing one hour before sunset. Any more were added on until in 1892, there was a service practically every evening of the week.

The order of services was as follows: On Tuesday evening Old Testament exposition, on Wednesday a singing meeting, on Thursday a service for the native assistants, both male and female, ... On Friday evening there was exposition of the New Testament, and on Saturday another singing meeting, at which the native teacher presided and offered an edifying prayer. In 1860 a morning prayer was introduced. It was very well attended even in unpleasant weather. Men and women sat in separate sections of the church during all services.

The most important day for religious services though, was of course 'Sunday. In 1832 they were livened up by an organ presented by a lady in France, who had visited Genadendal. Sunday services were described by a visitor in the early Sixties in the following way:

"I found the religious services very edifying. In the forenoon, after the instruction for the candidates for baptism, the church litany was prayed in the course of which certain passages were sung, the organ being played by a pupil of the training School. The congregation then dispersed for a short tie, and afterwards reassembled for the sermon.

which I had been requested to deliver. ... In the afternoon, two adults were baptized. The missionaries delivered a suitable address, after which the Litany appointed for such occasions was read and sure. At the evening were arranged amend the central service which con the sermon:

'The Predigt' was delivered after more singing, by a missionary cabinet-maker, in Dutch, very ranting, and not very wise: the congregation were singularly decorous and attentive, but did not seem at all excited or impressed... The service lasted three-quarters of an hour, including a short prayer and two hymns.

On the Treat festivals of the Church the special litanies of the United Brethren were performed by the congregation, for instance, the famous Easter Litany sung before sunrise on the burial ground. In a similar solemn manner were celebrated the awakening of the little girls at Herrnhut in 1727, and the Mission Festival.

The first native assistant to officiate at a service was Ezechiel Pfeiffer who in 1851 held the evening service. The congregation was very impressed.

There were two main motives for extending missionary activity to outstations beyond the confines of Genadendal. The first was that the missionaries increasingly felt that there existed a need for serving the surrounding country. The second reason was that the missionaries feared that the numerous labourers outside Genadendal would decline in spiritual matters if they lost contact with the congregation. Bishop Hallbeck was the first missionary to conceive the idea of serving the labourers on neighbouring farms whose owners allowed the Brethren to hold services there. In Lay, 1839 Hallbeck preached for the first time on the farm atjesgat. Its owner, a Mr. Grönewald, was a sincere Christian and a great friend of the Brethren.

was founded at Kopjes asteel, where a chapel, was completed in 1841.\textsuperscript{91} The most important of this type of outpost was Twistwyk, the farm of Commandant Linde. A chapel was inaugurated there in July, 1653.\textsuperscript{92} The work at these places was liable to be interrupted when a farm changed hands.\textsuperscript{93}

From 1803 when kohrhammer and his wife, at the vest of Governor Janssens, proceeded to the camp for hottentot soldiers at Wynburg among whom were many from Genadendal,\textsuperscript{94} the Brethren took it upon themselves to follow members wherever they were driven by economic necessity.\textsuperscript{95} Coloureds were no longer employed as soldiers members used to leave the institution during harvest time and in famine years. They dispersed over such a large area that it was difficult for the missionaries to work among them effectively. when, rail and road construction commenced in the last three decades of the nineteenth century and towns and mines began to exercise their pull on the floating labour force at Genadendal, the missionaries round it easier to follow them as they were concentrated on the railway lines and urban areas. The first step in this branch of missionary work was made in the pastoral tours of the chapel-servant, Stephan Prins, mentioned above.\textsuperscript{95} The missionaries chose a Coloured man because it was cheaper for him to travel and he could devote more time to this work. but they themselves were not averse to do this exacting work. Brother Hettasch for instance, undertook similar tours and travelled as far as Kimberley.\textsuperscript{96} A further step in this direction was the establishment of the church in Cape Town for inhabitants of Genadendal who had found work there. The station known as Beet, had a special status. it was situated on Genadendal land and had a resident missionary. The founding of Bé in 1864, the Brethren realised that a systematic settlement

in the neighbouring valley, settled against their will at first, it relieve to overcrowding. a house and a chapel were erected at Berea and a missionary was posted there. in October, 1855 the chapel was consecrated by the first missionary Brother B. liar'. The visiting Brother Buchner did not think that Berea merited the full time attention of a healthy man. in consequence the resident missionary often held an additional office.

On outstations the method of instructing the members and the care of the community was identical with that in Genadendal, although on a smaller scale. 'Speakings' were held at all outstations. As soon as possible naive school teachers from the training School were posted to them. They usually did a certain amount of religious work.

A number of factors hampered the application of these methods. These factors derived mainly from the mentality of the Hottentots. Idle problem of language, one of the difficulties in missionary work generally, was not important. Lost of the Hottentots had learned to speak some Dutch when the missionaries arrived. In the beginning there were only a few people who did not know Dutch, besides some members of the Bant tribes.

...having been some time among the white people, have learnt to talk religiously but are not al—
to be trusted. He missionaries found it hard in such cases to determine whether the motives for conversion were genuine. Even hallbeck, who was very sympathetic towards the Hottentots, criticises them for their lack of energy of mind, inability

104) ibid., Journal rk1.t. 1801.

to persevere awl their lack of independence of character. But he adds:

...in all probability a great variety of unfavourable circumstances have combined to produce this evil, and that for this very reason the cure is one of considerable difficulty."

the missionaries fully realised that they had come to a socially backward people, whose faults were a result of the conditions they lived in. the missionaries also found that harvest workers were prone to "fall into sin, one reason being that the labourers were temporarily released from the supervision at Genadendal.\textsuperscript{109}

Certain factors, however, facilitated work among the Hottentots and partially explain the success of the Brethren. any of the Hottentots told the missionaries that they had heard about Christianity from their European Masters. The Brethren thus occasionally built on foundations laid by others.\textsuperscript{110} In addition, no resistance was offered to Christian teaching by the traditional religion of the Hottentots. It had lost its hold on them and their tribal system had broken down. The captains, who played a certain role in early Genadendal society were probably only 'kraal' headmen.\textsuperscript{111} hey were also susceptible to the highly emotional appeal of the teachings of the first three Brethren. Not only the first journals, but neutral observers like Barrow mention the flowing of tears in the congregation.\textsuperscript{112}

The system of church discipline in Genadendal played an important part in the methods of the Brethren. To understand it a short account of the structure of the congregation is indicated. me affairs of the congregation were controlled by the missionaries and a Kerkraad, whose members were called chapel-servants. it was primarily concerned with administration of spiritual matters,\textsuperscript{113} and the care of church property such as the poor money. But they had also

secular duties which resembled those of the 'opsieners' (overseers) who formed part of the civic administration of the community. In practice there was therefore an overlap of functions and because of this, chapel-servants and 'opsieners' had common meetings.

In 1827 the Kerkraad consisted of fourteen chapel-servants later increased to eighteen. In fact the missionaries retained most of the spirituel and secular power, and were always in a position to exert pressure on individual members of the kerkraad. The missionaries, who met every day at table, discussed matters pertaining to the congregation. They were the final authority enforcing church disciplin. Moreover, the missionaries appointed the members of the Kerkraad and had power to dismiss them for scandalous conduct which involved their expulsion from the congregation.

The post of chapel-servant was not exclusively held by men and in the very earliest journals female chapel-servants are mentioned. The chapel-servants were always communicants and were the most fervent Christians in the judgement of the Brethren. The duties of the chapel-servants can be divided into those concerning the spiritual life of the congregation and the church property and their duties as 'opzieners'. Here, only the former will be discussed. The first chapel-servants were appointed to assist the missionaries in minor duties such as keeping order during services, providing for lighting up the church at evening services and similar responsibilities. Later their duties became more numerous. They took part in the comforting of the sick and other pastoral duties, as we have already seen. Satrobe's impression was that the chapel-servants of both sexes served in the true Christian manner.

123) r. Aces, Diary G., Riau. - Spt., 1809; Appendix A, III, 12.
At the beginning of the ear the missionaries had conferences with the kerkraad to remind them of their duties. These conferences were originally only held to inform the kerkraad of important matters, changes or improvements. The annual meetings were started by the chapel-servant themselves in 1809.

“Our chapel-servants assembled of their own accord in the avenue leading to the burying ground, to speak with each other about the occurrences of the past year, as the related to their spiritual course. He men sat down on one, and the women on the other side. They began, concluded their conversation with a hymn.”

By 1813 they had developed into regular meetings with the missionaries. After the introduction of the office of ‘opzieners’ the meetings became more frequent.

“Um diese Zeit bezeugten uns die Aufseher und Saal- diener den Wunsch, dass ihnen Gelegenheit möchte gegeben werden, zuweilen zusammen zu kommen, um fiber die znancherley Vorkoimnheiten in der Gemeine, die auf ihr Ant and ihren Auftra Bezug haben, mit einander sprechen zu Können.”

In 1826 it was therefore decided to have a meeting every month with both the ‘opzieners’ and the kerkraad.

It is laid down in the Rules and Regulations that the church discipline was to be administered by the missionaries alone. It is difficult to distinguish between pure church discipline and the discipline of the settlement, although the government attempted to draw a distinction in 1856. The actual punishment consisted of a reprimand either given privately or before the assembled missionaries, exclusion from church privileges before the missionaries or before the assembled congregation and finally expulsion from the station. These measures were mainly employed in order to combat vice and immorality. Occasionally, however, they were employed to inculcate the true principles of Christian doctrine. Once a communicant was excluded from the

Lord's Supper because of her inveterate hatred of another person. She concurred with the judgement of the missionaries as she felt that, though she had forgiven her enemy she as yee did not love her. A person wao had been excluded or even expelled from Gnadendal could always be rehabilitated if he proved by his conduct that he was worthy of consideration, showed sincere repentance and confessed his faults. Members under discipline, unless expelled, were still cared for by the missionaries who had meetings with them. Exclusion was surprisingly effective. Backhouse and hallbeck record that the individuals concerned were deeply affected. On the whole, however, persuasion was the most important means of maintaining order in the congregation. Lichtenstein is correct in saying:

"Bs is wirklich zum erstaunen, dass dies alias ohne Zwangsmittel durch bloßé ermahnung hat bewirkstelligt werden können. Sie kennen durcnaus keine andre Strafe, als Ausschliessung von den Gottesdienst und Verbannung aus der Gemeinde, und such dazu schreiten sie selten und nur, wenn ein ganz verderbtes Subjekt wiederholten Ermahnungen kein Gehör geben will."

Besides these individual punishments there were cases where the missionaries inflicted joint punishment on Groups. They might postpone the holding of Communion, or cancel the celebration of the festivals of the single Brethren and Sisters. In 1798 the missionaries even threatened to leave the Hottentots altogether if they did not improve their behaviour.

results the three original missionaries achieved were surprising. They themselves were elated at the eager-

cress with which Hottentots flocked to Baviaanskloof.  
A Cape Town friend wrote on the 25th January, 1795, that he counted 15e hearers at every meeting he attended.  
In 1801 the missionaries reported that the people were eager to be baptized or admitted to holy Communion, and that those not promoted in church privilege used to shed tears.  
Thus after only six years of work there were an estimated 705 people on the station.  

... she number in the congregation increases steadily till about 1860, when there were just 200 below the 3,000 mark.  
An exception to this steady increase came between 1822 and 1826 when Genadendal underwent severe hardships due to bad harvests and a general economic depression in the Cape. The number of communicants showed a similar steady increase, again with the exception of the years 1822-26. In 1861 it reached its peak with over a thousand communicants.  

... the rate of increase it should be noted was not uniform, it accelerated after 1638 when the emancipated slaves joined the settlement. The group most affected by the emancipation of the slaves was the baptism class, which in 1835 comprised 52 candidates, whereas in 1539 it had increased to three times that number.  

... of the congregation was reduced to 1,875 souls thirteen years later. After 1673 there was again a rise until in 1668 the figure too thousand was topped. The class of candidates for baptism correspondingly dropped to 39 in 1873, but rose to 138 in 1888, in spite of the fact that Genadendal was then no longer an important missionary centre.  

... attendance at the services in proportion to the number of the congregation was greater in the early part of the century than later. In an evening service, attended by Latrobe, 400 attended. Hallbeck estimated that three quarters of those at home and not hindered by sickness or...
other impediments attended daily either school or at church. \(^{145}\)

- attendance of adults at week day services declined after 1860 and in 1878 only 101 adults were present at the 'general speaking.' Attendance improved after 1873 again.\(^{147}\)

- Attendance at Sunday services did not fluctuate as much; it was good throughout the century.\(^{148}\)

- He attendance at the mead services, however, was considerably influenced by the agricultural seasons and the nature and time of the harvest. It was small in the bad harvest years of 1822 and 1823.

- When the harvest was later than usual mile Christmas services were poorly attended, but the New Lear services were generally well attended. Although a capacious Church had been erected in 1800, the number of worshippers often necessitated separate services elsewhere from 1846 onwards.\(^{150}\)

- By 1880 the church no longer satisfied their requirements.

- This development is the more striking as an increasing number of inhabitants were finding 'lark outside Genadendal for lengthy periods.

- the women were far more susceptible to the teachings of the missionaries than the men. One reason for this was, as the missionaries realised themselves, that the men left the set, lament in order to work.\(^{153}\)

- moreover, in 1807 the missionaries report:

\"As for the women, there is a more general desire prevailing to grow in the knowledge and grace of our Saviour.\"

- In 1880 the proportion of women to men in the class of the communicants was three to one, although the number of men was equal to the number of women.\(^{155}\)

- of the visitors to Genadendal were impressed by the attentiveness of the Hottentots and their singing at the
services. Lady Anne Barnard describes their interest and their singing in the following words:

"The service began after the Presbyterian form with a psalm. Then indeed the note that raised itself to heaven was an affecting one; about one hundred and fifty Hottentots joined in the twenty-third psalm in a tone so sweet, so loud, but so just and true that it was impossible to hear it without, being surprised.

...Not a Hottentot did I see in this congregation that had a bad passion in the countenance; watched them closely—all was sweetness and attention; I was even surprised to observe so few vacant' eyes, and so little curiosity directed to ourselves;..."

In the middle of the nineteenth Century the tone of the services was not quite so ardent. lady Duff Gordon, writing in 1862, states that

"...the congregation were singularly decorous and attentive, but did not seem at all excited or impressed...

She too was impressed by the singing, and states that the six-hundred people present at the morel service...

...made music more beautiful than any chorus-singing I ever heard."

And Brother Buchner adds:-

"On both Sundays attendance at the services was excellent, and the singing splendid, for the people are thoroughly musical and have beautiful voices. A native always presides at the cabinet organ and plays without notes...

fervour of Christian belief manifested itself occasionally in what was called 'a religious regeneration', usually of short duration. Sometimes there were spiritual stirrings in one congregation, from which would emanate prayer unions, and spontaneous singing."

she tenor of confession made by converts to the Brethren, shoes that many sincerely believed that they had experienced the living Christ."

on their death beds. The Brethren admit, however, that a number of their wards were converted genuinely only in the face of death. Hallbeck, writing in 182.1 states:

"...that most of the Baptized and Communicants, when tried by affliction, are pattern of Christian patience and resignation to the will of the Lord."

Brother Buchner towards the end of the Nineteenth Century reports:

"...what struck me very forcibly, was that when we made visits in the village, all people and especially the women, at once begat spiritual conversation. The people are deeply interested in spiritual things; they have a good degree of religious knowledge, and feel deeply on such matters. They manifest an uncommonly childlike confidence in the religious sphere, and a quick perception of the grace of our Saviour."

the Brethren were sober minded enough to realize shortcomings in their charges. They complained of occasional hypocrisy. Such complaints increased after 1850. 

Visiting clergyman refer to the formally of the congregation at Genadendal. Buchner, in the context of the statement just quoted, points out that spiritual interest was not infrequently superficial.

If these were the results of missionary labour it behoves us to examine more closely the character of the men and women by whom these were achieved, in general the missionaries of the Unified Brethren were German however, except one such as the eldest of the first three missionaries, endrik Marsveld, a Holander and the beloved Bishop Hallbeck, who was a Swelle by birth. 

emphasis was laid on the practical training of these men. thus Künne, manufactured the famous Genadendal knives,

beinbrecht supervised the erection of the bridge over the Sonderend, and was an expert on rills and steamengines. The theologians too, were simple, diligent men. Hallbeck was described as: "...a plain, simple-hearted Christian, who visited the sick, and took his turn in the school instructions of ten Hottentot youths..."

According to Schneider, Schwinn's wife was unable to sign her name on her passport, the only case of illiteracy known. From 1848 to 1869 a medical missionary Brother Roser, was stationed at Genadendal. He was a fully qualified doctor. After Roser had, left a missionary who had taken a short course in medicine was responsible for the health of the community. It was the policy of the Mission Board to have a man capable of caring for the health of the community. Missionary family life was very much the same for unmarried missionaries as they should marry. His practice was kept up until as late as 1802. "Ay friend the storekeeper married without Navin ever beheld his wife before they met at the altar, and came on board ship at once with her. He said it was as good a way of marrying as any other, and that they were happy together."

Children of such unions, were educated for the first few years in one infant school at Genadendal. After that they were sent to Europe where were trained as missionaries. missionaries met at meal time and talked over the affairs of the day. He description of these common tales, as given by Latrobe in the beginning of the century resembles the accounts from the middle awl the end of it. J. Murray says in 1863:

175) Nchr. 1. 1825: Ber. 3., Apr. - Dee., 1823.

"About eight of thee reside here with their families, and have in several respects a combined house-keeping... they assemble in a day at a common table in a large test plain dining-roots, on the walls of which hang portraits of Zinzendorf, Schmidt, and other members of the Brethren's Church...)

And Jacob gives the following description in 1896:

"There are at present sever missionaries now residing at this station, all married... Each life: but for the two most important semis of the day – dinner at 12 and supper at 6:50 – all meet in the large dining-hall, here they also resemble at 2 o'clock for coffee, when they have a short respite in their busy life and opportunity for social intercourse..."

The work of the missionaries was divided in the following way in 1663:

has his allotted share of preaching the gospel, the care of souls, and school-teaching. Besides this, each takes his part in the secular labour by which the expenses of the mission are met. There is a corn-mill which still bring in a little also a smithy, a carpenter shop a drugstore, L printing-office

years later, conditions had not changed:

"In addition to the direct spiritual portion of the work and the charge of his own district, each of the brethren is responsible for some special department which meets the needs of the colon – the general store, the mill, the printing-office, the gardens, &c., and the sisters, in addition to the ties of household and family, have each their special ministry Jr. the community."

All the missionaries were very much attached to their home congregations in Europe. Great events in their lives were Brethren passing through and the European post.

The attitude of these missionaries towards the Rottentots and the Coloureds was not over-idealistic. they were rear to admit that the Hottentots had faults but the believed that they were not inherent faults. When they were asked to give their opinion on measurer restricting the freedom of the Hottentots, they opposed them frankly. But with wise restraints they did not give violent expression to their}

vie. Hallbeck, for instance, objected to the vagrancy law of 1834 when civil Committer asked him for his opinion. He argued that it not only harmed the Hottentots, but by restricting their movement it caused the farmers inconvenience. Hallbeck believed that the law was unnecessary, especially if the policing of towns was improved and the control of wine made more strict.

Hallbeck was convinced that the Hottentots were capable of improvement. "The people have on this occasion, shown a willingness and perseverance, unprecedented in the history of the Hottentots at this time. The building of a bridge particularly as a private undertaking, and an undertaking of the Hottentots, is such an uncommon thing in this Colony, that it is talked of with astonishment from Cape Town to Grahamstown; and will, I trust, silence those who accuse the Hottentots of incorrigible sloth and stupidity." 190)

Hallbeck was also of the opinion that the school-children of Genadendal had the same ability as those in an English school.

"I think they are just like children in every part of the world, as far as I can judge. There are some of very good capacity, some bad." 191)

Hallbeck, a contemporary of Dr. Hallbeck, was not alone in his championship of the Coloureds. The missionaries at the end of the century were as sympathetic towards the Coloureds. In 1392 the characteristics the position of the farmers who despise the Coloureds and predict tension between the lower and upper classes within the Cape Colony as they were then developing in Europe. 192)

She close relations with the missionaries and their spiritual charges led to a certain amount of social intercourse. Coloureds served as servants in the European families. Moreover when the missionaries fell ill the Hottentots skilled in the art of healing were called in, and Hottentot midwives would take care of European childbirth. 193)

Hallbeck and his wife were prepared to adopt a child. 194)
a Coloured child whose stepmother gas neglecting her and who had been handed over to the care of the congregation.\textsuperscript{195})

The main reason why there were no intermarriage between European missionaries and Coloured (native) church members, probably 18y in the feet that the Mission Board sent very few unmarried men and supplied single missionaries with Rives.

This sympathetic attitude of the Brethren earned the gratitude of the Hottentots. Their reverence for the missionaries, was not impaired by the fact that these missionaries obeyed the government strictly and did not actively oppose restrictive legislation directed against their charges.\textsuperscript{196})

When Father Harsveld fell sick in 182J thy in 1882 everyone in Genadendal attended his funeral.\textsuperscript{197})

were the men and women who infused into the settlement at Genadendal a Christian attitude to life. Hallbeck was co erect in maintaining that, such an institution could not exist without "...a spirit of Brotherly Love or Charity."\textsuperscript{198})

The Development of the Administration of the Genadendal Community

The missionaries were not only in charge of spiritual matters. Until 1816 they were the only secular authorities. To understand what the missionaries had to cope with in this respect, one must be acquainted with the number of inhabitants in Genadendal. A first estimate of the total number was given in the year 1798. The missionaries reckoned that there were about 700 people under instruction. Probably this is an underestimate, because in 1799 in an official report on the numbers at Genadendal they state that there are 252 men, 521 women, and 661 children, i.e., 1,234 souls are listed. After 1803 a decrease set in, because a hundred men were recruited for the Cape Regiment. In 1807 only 747 persons lived at Genadendal. From 1807 onwards, there was a steady increase to the highest total number which was reached in 1860. There were two fluctuations in this population trend. The bad harvests between 1822 and 1826 retarded the increase. The influx of the slaves after 1836 accelerated it. In December 1838, 202 persons were permitted to live at Genadendal, and in 1839 a further 430 received permission.

In 1860 the number of inhabitants was 3,521, it was reduced to 2,496 in 1870. Arum this year onward, however, there was a gradual increase again until in the eighties the number remained static just slightly below three thousand. The figures given in the accounts are not quite accurate, for two reasons: firstly, members of the congregation who had left the station were only struck from the books after a number of years; and secondly, the missionaries probably often included the men who were working outside Genadendal. A census taken in April, 1825 during the ploughing season, for instance, shows only 922 people, whereas the total number at the end of 1824 had been 1,242. In 1875 only 2,344 inhabitants were actually counted to be

1) Appendix B for this discussion.

7) ibid., 1. 1828: Ber. G., 1325.
at Genadendal, but at the end of the year the number was given as 2,726. 

It is more difficult to gain an insight into the racial composition of the population. The basic stock was probably Hottentot, but with accretions from other races. Lichtenstein maintained that the baptised were all 'bastards' An early settler at Genadendal whose recollections were included in the accounts for 1851, claimed that her father was a European then Lady Duff Gordon visited the settlement in the 1860ies, she met the last 'pure' Hottentot who was estimated to be 107 years old. 

, any persons who entered the station, and were referred to as 'Hottentots' by the missionaries were actually half-castes. There were a considerable number of Hottentot women who had illegitimate children by European fathers. Already in 1797 the missionaries complained about the immorality between the Genadendal girls and the dragoons who were posted at Zoetemelkswallei to protect the mission station. 

In 1866 and 1870 the missionaries reported that irresponsible Europeans created disturbances in Genadendal by bringing wine into the village and having dances with inhabitants. Two Europeans actually resided in the village and were members of the congregation, while a third lived with a Coloured girl in irregular marriage and caused the missionaries serious concern. 

From 1809 onwards there was also a Bantu element in the population. These 'Caffres' had been ordered out of the Colony by the government. Those who were permitted to stay had to reside at a mission station. In 1810 one of the first caffre woven, the daughter of a 'captain' was baptized.
A few years later Latrobe visited the "Caffre-Kraal beyond Baviaans River was inhabited largely by converted Bantu. One of the baptized women tried to persuade him to establish a mission in 'Caffre-Land'.

The second largest racial group was formed by the descendants of the slaves. They were mostly of Bantu and Negroid descent. In 1848 the ratio of Hottentots to emancipated slave; was estimated to be two to one.

A graphic description of the external appearance of the Coloured at Genadendal is given by Lady Duff Gordon in 1862:

"she Hottentots, as the are called - that is, those of mixed Dutch and Hottentot origin (correctly, 'bastaards') - have a sort of blackguard elegance in their gait and figure which is peculiar to them; a mixture of Negro or Mozambique blood alters it altogether. the girls have the elegance without the blackguard look; a 1 1 her slender, most are tall; all 'ractical all have good hands and feet; some few are handsome in the face and many very interesting-looking...he complexion is a pale olive-yellow, and the hair more or less woolly, face flat and cheekbones high, eyes small and bright. These are far the most intelligent - equal, indeed, to whites. A mixture of black blood often gives real beauty, but takes off from the 'air', and generally from the talent; but then the blacks are so pleasant, and the Hottentots are taciturn and reserved. The old women of this breed are the 'earliest hags ever saw; the are clean and well dressed, and tie up their old faces in white handkerchiefs like corpses, ... they are.

It was the general practice in all the settlements of the United Brethren to have a set of rules and regulations determining both the spiritual and temporal conduct of the community. The Genadendal code of rules is first mentioned in the accounts in 1803. Discharged Hottentot soldiers had to agree to it before they were permitted to reside in the village. In 1809 communicants were debared from partaking of holy Communion when they transgressed the regulations relating to the purchase of alcohol by villag-

20) tic 5990 ecclesiastical return for leer ended 31st Dec., 1848.
22) CI . Latrobe, pp. 390.
When Latrobe visited Genadendal he was requested to revise them in the light of comments received from the Missionaries and the rules in force in European settlements of the Unitas Fratrum.25
these 'dodified' rules of 1816 formed the basis of the revised Rules and Regulations of 1827 which were the work of Hallbeck and the missionaries, with, the help of the 'opzieners' and chapel-servants. After they had been read out to and approved of by the assembled men of the settlement a Dutch and an English copy were sent to Governor Bourke, who strongly approved of them.25
When in 1858 the Superintendent received the title which granted the Genadendal lands to him in trust for the Hottentots 27 he also received the new regulations revised by the government. These regulations of 1858 embodied three chapters of the revised Rules and regulations of 1827. A fourth chapter was added which provided firstly, that the civil administration of Genadendal should be strictly separated from the administration of the congregation, and secondly that the number of inhabitants should be limited to three thousand.28

It was expressly stipulated in these rules and Regulations of the Genadendal Institute that they did not supplant the laws of the Cape Colony. In the case of a crime against the laws of the Colony the culprit was to be handed over to the colonial authorities.

The first section - appearing in the 1827 document under the heading 'Of Christian Doctrine, fellowship and general Social Duties' - deals with ideas of dogma and Genadendal relations to other denominations. It is stated that the congregation at Genadendal feels itself a part of the church of the United Brethren, and that therefore, the Bible is the basis of teaching and conduct. Sunday should be kept as a day of rest and worship. Only teachers approved of by the directory of the United Brethren could be accepted. As regards moral conduct the emphasis is laid

24) P. Aces. LVIII Diary G., Jan. - dept., 1809
28) Appendix A for this discussion; c0 till Surveyor General to Civil Commissioner Mackay 28th Jul., 1851.
on strict honesty and on diligence. The members are reminded, however that the goods of this earth are transitory. In general a high standard of moral conduct was expected. Marriage is an institution ordained by Cod. e violation of the rules of Christian marriage Junes, be punished by exclusion from congregation and institution. It is laid don hoe Christians and heathen residents can be legally married. lastly, the duty of parents to provide their Children with a Christian education is enunciated.

The second section - headed in the original of 1827 'Of outward Order and regularity of the institution" - lays down that every inhabitant of Genadendal shall have a fixed place of abode, especially young unmarried persons. It stipulates that houses should be well built and kept in good repair. it gives a missionary the right of Inspection and builders are bound to obey his instructions when erecting new houses or altering old ones. 'Opzieners' are entrusted with the duty of allotting garden and arable land and are made responsible for seeing that such land is used properly. when it is not effectively cultivated it can be confiscated and given to more deserving persons. Disputes over gardens and arable land have to be brought before the 'inspector of gardens'.

The conditions under which land in Genadendal was held by inhabitants is defined. She main condition being that such land is only held under the rules of the Institution and therefore, cannot be sold or bequethed to persons outside the settlement. She owner of a house and a garden was, However, entitled to sell or bequeath his property to another resident on condition that he gave due notice to the superintendent of the institution. scat the owner could forfeit his rights by prolonged absence, unless he delegated a tenable person to take care of his plot. Then folio* regulations concerning stock and rules for the impounding of straying cattle. Such disputes as arise out of damage done by stock and over ownership of land should be brought In the first instance to the 'Opzieners' or missionaries, although nothing is in the way of taking complaints to a magistrates. So preserve public morality it was laid down that residents could not hove strangers overnight unless permission nod first Been obtained from the missionaries or from certain 'opzieners'. Further, residents we re expected to observe a curfew after the evening service. 'Young people were to be under supervision as much as possible; the.) were not allowed to participate in recreation likely to lead them into sin. Wine could be brought into the villag. in small
quantities and for immediate use only. It was prohibited to sell drink in the settlement. The residents were expected to hold themselves available for work necessary for the commonweal, such as repairing roads and the church, and to see that they kept the roads in front of their lots in an orderly state and that the drinking water was not polluted. The community took care of the sick and infirm and, therefore, the inhabitants were enjoined not to forget the poor box. It was also defined how a person might enter the institution. A thorough inquiry into his previous life was made. If this was satisfactory and he was prepared to abide by the regulations, he was permitted to reside in the settlement on probation. Persons born in the village had to promise to obey the rules when they were accepted into the congregation. Finally it was laid down, that any person who habitually violated these rules lost the right to reside in the settlement.

The aim of this section then, was to preserve a high standard of public morality and to outline ways of settling disputes peacefully.

The third section - which deals with "Superintendence of the Institution," - is of a different nature. It establishes the authoritative body which was charged with enforcing the rules, the 'Opziener konferensie.' The basis on which every individual was expected to comply with these rules was that they were agreed to by the residents and were not laws imposed by the Missionaries. It is difficult to say in how far this basic assumption was acted upon. In practice the residents in assembly agreed to the rules and regulations which had been drawn up by the missionaries. What the latter insisted on was that the inhabitants knew the rules. 'Hew people' had to understand and agree to abide by the rules before they were admitted. Persons born in Ge- nadendal were told what the rules of the community were when they were received into the congregation. Besides, the rules and Regulations were read to the assembled congregation at regular intervals. The final chapter aided in 11... by the government aimed at separating the civil administration from that of the congregation and giving the government a greater say in the application of the Rules and regulations. The reasons for this step were two. It was felt that a further increase in the

29 (30 611 Rules and Regulations of the Institution at Ge- nadendal, Revised 1827. mark in the margin by Teutsch.)
population of Genadendal would be undesirable and that therefore, the government should be able to control it. Secondly, there had been complaints about tam civil administration of Genadendal by some residents. The government wished to safeguard the civic right of the inhabitants. expulsion 'l as to be ', wide contingent on the consent of the magistrate. The right to vote in civic matters was defined. in terms of property. The government reserved itself the right to amend the Rules and regulations on the application of the missionaries and four fifth of the eligible voters. Finally, the right of every resident to take stock found on his land to the pound was reaffirmed.

then the legality of the 1858 Rules and regulations were challenged soon afterwards they were held to be invalid in the supreme court on the grounds that they were not parliamentary Laws. To place the administration of Genadendal on a legal basis it was found necessary to have a special mission station act. This act was passed in 1909 and was accepted in Genadendal only in 1926. The main reasons for, or perhaps the most important reason for the invalidity of the and regulations was the fact that the land on which the institution stood had been granted in trust. It was not private property as for instance the Moravian station at Elim.

residents of Genadendal participated in administration of the village from the beginning. There are references to the employment of Hottentot 'captains' in the accounts before 1816. These captains were invested with some authority direct from government. The of them possessed a staff of authority. Lie early days captains were responsible for maintaining law and order at Genadendal. They assisted in the collection of taxes and in securing

The government was satisfied with this system of administration. Landdrost Rhyneveld, in 1802, praised the obedience of the Hottentots and pointed out that for a thousand people at Baviaanskloof no Justice of Peace was necessary, whereas ordinarily a Justice of Peace had enough to do among three hundred people. Later this rule by traditional tribal authorities was supplemented by that of the Kerkraad which acquired a number of temporal duties in addition to its church duties. But rivalry between various factions and clannish loyalties were not unknown among the leading residents at the time of Latrobe’s visit and caused the missionaries a certain amount of trouble.

Perhaps this was one of the reasons why it was decided to institute the office of 'opziener'. The main reason, however, was the fact that Genadendal had increased in size. It was no longer possible for the missionaries alone to keep a watchful eye over the community. When, therefore, the chapel-servants proposed in 1816, that a number of respected persons should be appointed to assist the missionaries, the proposal was adopted. In Lay, 1816 32 overseers met for the first time, with the approval of the Landdrost at Caledon. The 'opziener' at first worked side by side with the 'captains'. Koopman, who had been the captain in Latrobe’s time, became chief overseer in the village and received a daily stipend of two shillings from the government, until his death in 1642. His duties as a chief are nowhere defined.

In the beginning the overseers were appointed by the missionaries. When the Mules and Regulations were revised in 1827 a system of election was included. The qualification for a voter was twofold: the possession of a house and garden and the status of a communicant. Only communicants with 'walled houses' could be elected as overseers. Overseers were not elected regularly but only when a post fell vacant.

Under the 1358 rules and regulations a further qualification war added viz., that only a person who owned a house and garden worth 45 could vote. 45

bode of overseers, consisting in 1827 of 18 members and in 1858 of 25 members, together with the chapel-servants, of whom there were 14 in 1827 and 18 in 1856, and the missionaries formed the 'Overseers Conference.' It met at least once a month. It was the duty of the conference to settle disputes. Its missionaries were looked upon as a kind of executive and, dealt with unimportant matters between meetings. Reports of actions taken had to be made to the conference, however, and important matters had, to be laid before it.

duties of the overseers were those of maintaining order in the settlement. They were not entitled to make bye-laws for the settlement. They had powers to settle minor disputes. It was their special duty to see that strangers did not enter the settlement. Persons expelled from or permitted to enter Genadendal were informed of this decision in the presence of the 'opzieners' and never without their knowledge.

monthly conference of the overseers was instituted in 1826 at the request of the chapel-servants and overseers themselves. In 1827 it was included in the Rules and Regulations. 48

This body conducted the administration of Genadendal for a century.

Overseers could only remain in office 'during good behaviour'. When, on account of irregularities, an overseer was publicly excluded from the congregation he was automatically dismissed from the Conference. 50 He could be re-elected if he repented. As the missionaries decided who was to be excluded they exercised some control over the composition of the conference. The missionaries apparently never used this power inequitably.

were two forms of punishment, exclusion from the

congregation and expulsion from the place. The Rules and regulations reserved to the missionaries the right to administer church discipline. exclusion was the most important means of maintaining discipline and public morality. It was remarkably effective, particularly until Hallbeck's death, but even in 1857 Suhl comments on the respect shown for this form of correction. The names of those publicly excluded were read out to the congregation about eight times a year. The reasons for exclusion could be religious, but in most cases the reason was drunkenness or immorality.

The missionaries' powers of expulsion were at first practically unlimited and the Veldcornets helped them to eject recalcitrants. When, in 1816, the 'opzieners' were appointed, they were immediately consulted as to the readmission of a repentant expellee. Against the expectations of the missionaries they advocated his readmission. The principle that the overseers conference should have advisory powers in matters of expulsion or admission was, therefore, already present in Latrobe's time. If a person continually broke rules and if he seduced other residents to succumb to vice, he was expelled. Only 54 persons were expelled from the village during the first twenty-five years of its existence.

Towards the middle of the Nineteenth Century, however, these two forms of punishment grew less effective and more difficult to apply. The number of persons excluded from the

congregation every year increased, especially after 1850. Some of the excluded became a centre of opposition to the missionaries. It had become difficult for the missionaries to expel troublemakers after the 1856 revision of the rules and regulations, as they made an expulsion order from a magistrate compulsory, but this power of the magistrate was not upheld in the Supreme Court which virtually made ejection impossible. In 1848 already, the relations of an expelled person often kept him at Genadendal, thus negating the effect of expulsion.

There were thus minority groups within the settlement, no opposed the accepted form of administration of the community. The main reasons for opposition to the missionaries were two. The less serious but widespread form of antagonism was the refusal of residents to pay the fees levied by the Overseers Conference, although these had been approved of in a public assembly. In 1848 the residents refuse to pay true fee for the herdboy. In 1878 the missionaries complained that the Genadendalers were unwilling to pay their school and congregation fees.

The more serious, though not so general, form of opposition was motivated by the desire for land and for security of tenure. The first manifestation of this was in 1850 when four Colours from Genadendal, who had been promised land as a reward for the services during the 1835 frontier wars, petitioned against an alleged encroachment by neighbouring farmers. The claim was pronounced unfounded by the civil Commissioner and Surveyor General, who had been sent to investigate. A letter from Teutsch, the Superintendent, shows that this petition was presented to the Governor against the sill of the missionaries. In 1858 some few residents...

caused trouble by attempting to obtain the status of a municipality for Genadendal. He were allowed to call a meeting for the purpose of asserting the wishes of the inhabitants, but suffered an overwhelming defeat. This, if successful, would have been tantamount to terminating the civil authority of the missionaries. In 1863 a petition was signed even by some of the overseers and chapel-servants, although it had been expressly decided by them conference that they should not sign petitions to the government affecting the administration of the place. The cause for complain was the refusal of the missionaries to purchase a heavily mortgaged house for the congregation. As a result some of the chapel-servants and overseers were dismissed. The missionaries now felt that the reason for the growing opposition was the fact that they exercised supreme civil authority in the settlement and this was injurious to their spiritual work. After 1892 another incident occurred and the motive was again the desire for more land.

It is thus obvious that internal opposition was growing and that, although the missionaries were still capable of enforcing their authority, the legal weakness of the system should have been remedied long ago. This weakness lay in the fact that Genadendal was not the property of the mission of the Unitas Fratrum but a 'grant station' to be held in trust by the Superintendent of the mission in South Africa.
As Genadendal was a 'grant station' and had not been purchased by the mission the government could interfere more easily in its administration than in a station such as Slim that had been purchased by the mission. There were four other spheres of contact between the community and the government. Government supervised the administration of the place. It employed residents as soldiers and otherwise. It influenced the community by promoting and sometimes obstructing the work of the missionaries. The Coloured inhabitants played a part in the internal political development of the Colony.

The initial grant of Genadendal was made in a resolution of the Council of acting on orders from the Council of Seventeen. By the resolution of the 19th December, 1792, the missionaries were permitted to proceed to Baviaanskloof, to perform missionary work, to gather a congregation and to administer the Sacraments. She Landdrost of Stellenbosch was asked to inform his Veldcornets that the missionaries should enjoy their protection. Teunissen, the commander of the Company's post at Zoetemelksvallei, was to provide them with everything they needed.

The British authorities during the first occupation were prepared to give the missionaries a greater security of tenure, When the missionaries petitioned against encroachments by the neighbouring farmers, the government was willing to investigate the situation. The disputed land was resurveyed and some of it was returned to the institution.

Under the rule of the Batavian Republic (1803-1816) no change of policy was recorded. Under the Second British Occupation difficulty arose about the erection of a church at Groenekloof on the grounds that the 'loan places' on which stations had been established did not belong to the missionaries. Latrobe then wrote to Bathurst, the Colonial Secretary, asking him to secure the land to the mission.8)

Lord Bathurst instructed Cradock in 1813 as follows:

"I am sure therefore that I am only anticipating your own wishes in conveying to you the Instructions of His Majesty's Government to give every facility in our power to the fulfilment of Jr. Latrobe's request, and to secure to the establishment for the use of its congregations either by grant or otherwise as you may deem most advisable, both at Groenekloof and Gnadenthal, such portion of and as the establishment may appear to you to require."  

The same time Bathurst informed Latrobe that formal grants of the land occupied by the missionaries would be made to "secure them from ejectment or disturbance in future." 10)

Before Cradock had received these instructions, he already acceded to a request by the Moravians for a new 'loan place' at Genadendal.11) as the Landdrost could find no suitable loan place, the neighbouring farmers were made to cede the necessary land to the institution. By way of compensation they received double the area of land they had ceded to the missionaries elsewhere.12) the thus enlarged area was resurveyed13) and the survey fee was paid by the missionaries.) A diagram of the land thus set apart for the use of the Hottentots' was sent to the missionaries.15)

Cradock did not grant a full title to the missionaries because he felt it would develop into a species of mortmain. This would have eliminated the possibility of residents appealing to the government.16)
in 1850 four dissatisfied Hottentots presented a petition to Sir Harry Smith including a plea for the granting of a regular title for the lands of Genadendal. The investigation which was set on foot then re-opened the question of the mission society's title to Genadendal. The official investigation viz., the Surveyor General and the civil commissioner at Caledon, recommended that the lands at Genadendal be granted on a nominal quit rent to the Superintendent of the mission in trust for the Hottentots.

missionaries were to remain in full possession of the buildings necessary for the running of the institution, and to retain the right to water and good and such other rights as they had hitherto possessed. The Commission envisaged the early granting of a municipality to Genadendal, when these rights of the missionaries were to be reserved. Both commissioners had been in favour of granting title deeds to the individual plot holders, but realised this to be impossible because of the confusion of rights to land at Genadendal.

Title was not granted to the oravians then but only after repeated appeals by the missionaries. The issue was complicated by the discovery of an error in the survey of 1815 which excluded most of the oldest buildings from the title-grant. Fortunately the Surveyor General did not object to including this in a correct survey. Title was eventually granted and received by the missionaries in 1850. The size of the area granted was entered as 5598 morgen.

Simultaneously with the negotiations for the title to the Genadendal lands attempts were, as we have seen, made to introduce individual tenure. the 1850 commission found
that its introduction would have been very difficult. In 1854 a bill was introduced into parliament aimed at dividing the mission station lands into 'erven' to be given as freehold to the occupiers. She missionaries at nadendal drew up a petition which was supported by the majority of the inhabitants, who apparently realised the danger of such a development. In a letter to the select committee which considered the bill, kölbing argued that the Coloureds would lose their lands if freehold titles were granted to them. The lauds at Genadendal were not capable of carrying the population living at the station. The reason why the inhabitants could subsist was that they worked for the farmers during the busy seasons, if land tenure were not specially safeguarded the Coloured occupiers would lose their plots and be dispersed. The granting of the 'erven' in freehold would cause an influx of low class Europeans who would disrupt the morals of the Genadendal community. The existing racial feeling was not caused by the presence of institutions but by the fact that: "As long as the coloured classes are treated with contempt because they are coloured, this feeling of races will not die away."

The bill was not accepted in parliament. A strong body of opinion outside Genadendal in favour of such a division of the lands until 1892 and later. It was Superintendent henning who then defended the 'clinging to the grants beside, there was a small party of residents in favour of individual title deeds."

In the beginning the colonial authorities expected the missionaries to police Genadendal for instance, they were instructed to ascertain whether there were any Hottentot deserters at baviaanskloof. The authorities
were satisfied with their handling of problems of public order. In cases when the missionaries were unable to enforce the authority of the government, officials were despatched to their aid, for instance, when a person resisted expulsion from the village. 1\textsuperscript{35} 1\textsuperscript{Ae British authorities tried to give the 'captains' at Genadendal some policing authority but apparently to little effect. 1\textsuperscript{36} in consequence it was the missionaries with the help of the 'pzieners' who apprehended suspected criminals. These were mainly stock thieves and runaway slaves, 1\textsuperscript{37} but also more serious offenders.

Occasionally government officials enforced orders which applied to the settlement such as the order received by Teunissen to limit the number of Hottentots and cattle at Bavianaskloof. 1\textsuperscript{39} Others commandeered residents to perform policing tasks, such as the recapture of runaway slaves. 1\textsuperscript{36} in 1849, the government appointed a constable with powers to arrest offenders against the law. The first constable as overseer recommended by the missionaries, but after four months a white constable was appointed. 1\textsuperscript{41} As the apprehension of criminals was now a responsibility of the civil authorities it is difficult to understand why farmers still accused the missionaries of being unco-operative in the tracking down of criminals. 1\textsuperscript{42}

There does not seem to have been very much work for the constable because he was later male postmaster as well. 1\textsuperscript{44} in 1857 a monthly court to be held by the magistrate from Caledon was instituted, but this found so little work that
was later only convened bimonthly.\textsuperscript{44)

At this stage it seems necessary to review in detail the development of government policy towards Genadendal. The three first missionaries were well received by the authorities of the Company at the Cape. they were advised to stay in Cape Town until Teunissen the commander of the Company's post, Zoetemelksvallei, arrived. Teunissen was instructed to 'assist and advise them to the utmost of his power' and, as described above, did so in the beginning.\textsuperscript{45}) The Landdrost cf Stellenbosch too was instructed to protect and aid the missionaries and to order his veldcornets to do the same.\textsuperscript{46}) Thus the government of the company did much to assist the missionaries in the founding of Genadendal.

Governor Dundas in 1799 on his tour of appeasement of the frontier. When the Batavians arrived, in 1302, Dundas recommended the brethren to he care of Janssens. The attitude of the Batavian authorities was very much the same as that of the first British occupation. Both Janssens and De Mist visited Baviaans-kloof and seem to have been impressed. They asked the Brethren at Baviaans-kloof for a chaplain to serve the Hottentot troops in the camp at Wynberg. Kühnhammer was selected for this work.

The last act of the Batavian government was to give Baviaans-kloof the core appropriate name of Genadendal. When Governor Caledon arrived in 1807, Kühn wrote:

'...that we lost in Governor Jansen, God has given us again in Lord Caledon; who, when Brother Bonatz and I called upon him, assured us of his friendship and good will to our Mission."

The first action of Caledon was to suggest the commencement of a station at Groenekloof (later mamre) and to grant the land for it. The favourable attitude of the British authorities is evident in the correspondence between Dawning Street and the castle. The Moravian missionaries were recommended to the special care of the Governors at the cape. Successive Governors stated that they appreciated the work of the Moravians and assisted them where they could. The increase of the land grant and the securing of the title are further proofs of the favour of the government. When in 1817 Somerset, reported to Bathurst that the missionaries in the Colony had not benefited it, he excepted the Moravians. Most of the Governors visited the institution, some even
after the tape had got representative governments

The governments, however, made use of the man power available at Genadendal. Hottentots were used in the repercussions of the 'trench Revolutionary Wars in the Colony. later they were employed on the Lantern Frontier against the. Finally they played their part in the Transvaal jar of 1814.

In 1795 the Dutch East India Company was in dire need of troops when an English attack threatened. It did not hesitate to levy hottentots as auxiliaries. Four cannon shots summoned the Hottentots to defend the Gape. the missionaries admonished the Hottentots to go which they did!, albeit reluctantly. Because of the absence of the government had to provide floor for the dependents of the soldiers. In September, 1795 most of the Hottentot auxiliaries returned. "If their conduct as soldiers the missionaries report:

he Hottentots ae in general considered as grave soldiers, and were always pot in the van, the farmers and citizens bringing up the rear." )

As the English had difficulties in the interior and their forces were limited, they also recruited men from, the settlement. In May, 1796 there were over a hundred men in their service. e congregation was depleted because the men took their wives and children with them. the missionaries had difficulties in feeding those dependents who stayed. After the surrender of the Dutch fleet in Saldanha Bay the colonists acquiesced in the English rule and the English released many Coloured soldiers. )

Governor Janssens in turn called for Hottentot volunteers. in 1803 already successful attempts were made at recruiting Hottentots. In October and September 1803 about 30 Hotten
tots volunteered and joined the forces in Gape .own. the Batavian authorities were especially desirous of having; dependable Baviaanskloof men as sergeants and corporals. The rest of the tibia bodied men promised to proceed to Gape when the signal can was fired. Captain Beseur praised their conduct and said their only complaint was the copious swearing of the other volunteers at Wynberg. Governor Janssens quartered the dependents of Hottentot volunteers on the
Baviaanskloof village. 187 women and children arrived there in October, 1804. Soon afterwards the able bodied men, who had not volunteered, were called to Cape Town.\textsuperscript{70}

After 1806 the English authorities required troops to defend the eastern Frontier. Besides volunteers, 90 men were commandeered to join the army in 1811.\textsuperscript{71} In the following year 21 volunteers were recruited for a hottentot regiment.\textsuperscript{72}

Hottentot volunteers on their discharge in the jeers between 1810 and 1820 had to promise to proceed to an institute such as Genadendal.\textsuperscript{73}

Soldiers from the were \textit{hilariously} valued because:

...whilst the hottentot soldier, formerly without sense or feeling of religion, now knows the nature of an oath and appreciates its value.\textsuperscript{74}

In 1619 the danger had become so acute that the 105 men with him to join the burgher forces as wagoners. He had been ordered to enlist 120 men but through the intercession of Hallbeck he was satisfied with fewer. She enlisted men had all returned by the end of the year.\textsuperscript{75}

In February, 1823, Captain Somerset arrived with instructions to recruit Hottentots for the Geese Corps. He informed the men of this plan. In May a recruiting officer arrived who only procured 13 men. He caused a disturbance on using liquor to persuade others to join the gores. The missionaries put a stop to this and he complained that the Genadendal people were disobeying government orders. Hallbeck was able to satisfy the authorities and undertook to explain the need for soldiers to his people. She eleven more Hottentots were prepared to go.

In 1835 200 men were levied for a commando. The Genadendal economy was hard hit by the absence of the men, especially as they did not receive any remuneration until the burghers had been discharged.\textsuperscript{77} The government was forced to supply the dependents with flour. Their commanding officer...
was pleased with the conduct of the hottentots and said they were a model to the regiment. They were only discharged in 1836.\(^7\) 

In May, 1846 over 300 men were levied from Genadendal for the Seventh Kaffir War. They returned in February, the following year. This time they were able to send home some money. They sent letters home fairly frequently. Again they were highly praised by their commanders. They only fault found with the was that they sometimes drank too much. After they had returned, another attempt was made to recruit volunteers. Favourable terms were offered and eventually about 100 men joined the Hottentot Corps. They were promised land in Kaffraria and a free journey for their dependents to their future domicile near the frontier.\(^8\) 

In January, and February, 1851 many were again prepared to defend the Colony in the Eighth Kaffir War. In the end about 361 men from Genadendal served at the front. The three stations of the Moravian Brethren alone, provided 1,000 men for the prosecution of the war. The Genadendals experienced sharp engagements in the Amatola Mountains and acquitted themselves well. They remained loyal to the government after the Shiloh and at river not Hottentots revolted. Most of these Hottentots arrived back in July, 1851 and immediately recruiting started for the formation of a free corps. As the returned men had been dissatisfied with their burgher officers, who had seduced the young Hottentot to drinking and card playing, the recruiting was unsuccessful at first. However, over a hundred men from Genadendal volunteered. Some returned but about 70 of them remained on the frontier and able to lead the dissipated life of soldiers.\(^9\) 

When an attempt was made in 1878 to recruit 300 volunteers not one of the besides; as would risk his life as they did not consider the Colony endangered.\(^10\) in 1681, however, over a hundred men were prepared to join the forces as wagoners.\(^11\) 

The Coloured community also played a part in the co-
stitutional development of the Cape colony. When in 1846 the Colony was stirred to indignation by the plan to land convicts at the Cape, the missionaries felt that this would endanger the moral security of their Hottentots. They therefore drew up a petition signed by 472 coloureds and requested the revocation of this order. In 1849 the residents pledged their support to the Anti-Convict-Association, and when the ship had arrived in Table Bay many Genadendalers signed the resolution passed at the mass meeting which decided to actively oppose the landing of the convicts.

Introduction of the representative constitution in 1653 filled the Coloureds at Genadendal with apprehension and the missionaries had to explain it to them and allay their fears. By this constitution many residents qualified as voters. The elections held in 1854 were fairly quiet, but in the 1856 elections the missionaries were shocked by the copious drinking. In 1669 the candidates for the Upper house provided a roast in Genadendal at which wine was served and the candidates for use Lower House procured votes by bribing members of the electorate. During the elections in 1671 the missionaries estimated that 1,500 bottles of wine were brought into the settlement. When, as in 1874, there was no polling station at Genadendal, the successful candidates thanked the Genadendal electorate for their support by sending 45 bottles of wine; wonder the missionaries felt that the right to vote was of no real benefit to the Coloureds at Genadendal. In 1878 they again complain of copious bribing. Unscrupulous candidates made use of the Coloured vote for their own ends, yet the Brethren dared not advise their charges for fear of evoking the opposition of the political parties. Al few "ears better the missionaries characterise the situation thus:

*Tenn ein angehender volksbeglücker 'Utz wad Stimne Parlament erlangen will, werden hunderte von refund sterlins ausgegeben, um die Stimmen der Harbigen zu erhalten, und ist dann der Zweck er-*
In 1884 the secret ballot was introduced and this improved the behaviour of voters at Genadendal. The Granting first of representative and then of responsible Government to the Cape Colony made the government subject to censure by the fuming interest, and therefore, the influence of the missionaries on government policy became less effective. The advent of the Afrikanerbond in the 1880ies made the missionaries apprehensive. We Government, influenced by this party, reduced the financial grants to mission schools. The relations between the community and government were only stabilised when the 1909 Mission Lands Act was applied to Genadendal in 1926.

91) *Achr. 3.* 1885: *Ber. G.,* Jul. - Dez., 1883. (When a prospective benefactor of the people wants to get a seat in Parliament, hundreds of pounds sterling are expended to obtain the votes of the Coloureds, and when the goal is reached such a man, who has been voted into Parliament by the natives, helps to pass legislation that is especially injurious to these poor natives.)

94) L. N. Schmidt, *Die plaaalike bestuur,* 1792-1926.
The colonists were divided in their attitude towards the United Brethren at Genadendal. There were always some who were favourably inclined to the missionaries; others were bitterly opposed.

The first missionaries were welcomed by a number of fervent Christians in Cape Town, and they called on a certain Cloete at Constantia. When the missionaries had established themselves at aviaanskloof, two farmers visited them and one of the two invited them to his home, saying: "Let us be good neighbours." The missionaries visited the farmers and European visitors attended the services at Baviaanskloof. It was on religious grounds that this early friendship between farmers and missionaries was based.

European who attended services on festive occasions are frequently mentioned in the accounts from 11500 onwards to about 1855. From then such visitors became fewer until at the end of our period no persons from the neighbourhood, except clergymen, visited the institution. Until the emancipation of the slaves in 1838, the slaves from neighbouring farms, accompanied by their masters, attended divine service at Genadendal and Christmas and New Year services were generally well attended because farmers allowed their Hottentot servants to go to Genadendal after the harvest had been gathered in.

The intervention of Mr. Cloete and his friends saved Baviaanskloof from serious trouble. On receiving Cloete's report on the order limiting the number of cattle at the station, the authorities rescinded the order. Cloete later purchased the land adjoining the mission 'with a view to the safety of the mission.'

There was, however, also a great deal of bitter opposition to the missionaries. The reasons for this opposition are obvious: the farmers feared that the institution at Baviaanskloof would deplete their labour supply because the Hottentots obviously preferred to go there than work for them. The mission lands, furthermore, limited the expansion

4) e.g. Exs. F. Accs. Journal Eklf. 1801; Nohr. 6. 1820: Ber. 6. Okt. - Dez., 1818.
of the farmers. In addition the farmers felt that the Hottentots should not benefit from an education that they had never been able to procure for themselves. As Calvinists, the colonists at first opposed the type of religion preached at Baviaanskloof. Finally, they disliked that the missionaries interceded for the Hottentots when they had been ill-treated by their masters.

Certain colonists, therefore, attempted to make the position of the missionaries untenable. They planned a boycott of the mission which was unsuccessful. Farmers tried to detain Hottentots proceeding to Baviaanskloof by such methods as holding back their children. Malicious rumours were started with the aim of deterring Hottentots from moving to the station.

In 1795, when the Cape was troubled by disturbances in the interior and the threat of an English attack, the security of the missionaries too, was threatened. In July Hottentots reported that the farmers who had taken part in the revolt at Swellendam had told them that the school at Baviaanskloof would soon no longer exist. The three missionaries thereupon prepared for flight. On the advice of Teunissen they sent home all the Hottentots who came from beyond the Sonderend River to pacify the insurgents. But on the 20th July, some of the 'nationals' arrived to inform them of their decision regarding the institution. Kühnel was shown an article in their manifesto which read as follows:

"We will not permit any Moravians to live here and instruct the Hottentots, for as there are many Christians who receive no instruction, it is not proper, that the Hottentots should be made wiser than the Christians, but they must remain what they were formerly.

Those Hottentots who were born on a farmer's estate must live there, and serve the farmer till they are 25 years old, before they receive wages. The Hottentots must live among the farmers and not assemble together as at Baviaans Kloof.

All Bushmen, or wild Hottentots caught by us, must remain slaves for life.

Item, the Moravians were never meant to be employed among the Hottentots of this country, but among the Bushmen..."
This manifesto was said to have been sizzled by three thousand. Yet the threats of the 'nationals' themselves did not materialize.  

In July the Brethren received a peremptory order from Commandant Pisani, who was reputed to be marching on Rodesand with 800 men, to leave Baviaanskloof immediately. 

Teunissen advised them to go to Cape Town and promised to take care of their belongings. They left Baviaanskloof on the 31st, July. On their arrival in Cape Town they immediately proceeded to the Governor, who was surprised at the audacity of Pisani. The representative of the 'nationals' in Cape Town, who was negotiating an agreement on the defence of the Colony with the authorities of the company, told the missionaries that Pisani was not one of them and that they would not be tamed if they returned. Pisani was captured by the 'nationals' themselves and handed over to the officials in Cape Town. The Governor was then of the opinion that they would be safe, so in August they returned on the wagons of one of their farmer friends.  

In February, 1796, after the English had occupied the Cape apparently another attack on the mission threatened. According to the journal a number of men gathered on a farm near Baviaanskloof with the aim of destroying the station. Hottentots brought the news of this attack to the missionaries, another informed the government. General Craig sent a letter to Teunissen threatening severe reprisals if such an outrage should occur. After this incident, never more than a strong threat, there was peace. 

In subsequent years a number of 'unimportant differences over the boundaries of land' arose. In 1796 their old friend Cloete complained about the trespassing of cattle onto his farm. Similar complaints were made by farmers who lived beyond Cloete's establishment. The missionaries believed that the land on which the cattle of the Hottentots grazed did not belong to Cloete as no farms were to have been given out in the Baviaanskloof area. In fairness to
Cloete, however, it must be mentioned that he produced his title to the farm Weltevreden. The only condition that the Company had imposed was that Cloete was not to drive his cattle through the Sonderend and thereby infringe the rights of the neighbouring Hottentots. Three years later, the missionaries and Cloete’s son came to an agreement. The Hottentots were permitted to graze their cattle on Cloete’s farm twice a week.

In 1799 the missionaries petitioned the English Governor because of the encroachment of two farmers on Baviaanskloof land. The matter was settled in favour of the missionaries after the land had been resurveyed. All the land seized by the farmers was not returned because it would have endangered their financial position. Baviaanskloof was compensated by a grant of money towards the cultivation of the land returned. After this no serious boundary disputes are on record except unfounded claims of certain residents in 1850 and 1907.

The relations between the missionaries and the colonists improved steadily during the first British occupation. The number of visitors to the services held at Baviaanskloof increased. Their attitude towards these services was not longer one of curiosity but one of religious sincerity. Permitted their slaves to attend. From eighty to a hundred whites attended the Christmas and New Year services in 1801. They were beginning to appreciate the value of Hottentots educated at Baviaanskloof and meet to prefer Christian servants to heathen. When Lichtenstein visited the settlement he noted that cordial friendship existed between missionaries and the colonists.
After 1802 it was a regular practice for colonists to spend Christmas and New Year at Genadendal. The colonists were accommodated in the houses of Coloured residents. Sometimes there were over twenty wagons on the 'wer t.' The number of people attending religious festivals decreased after 1850, although in 1869 nearly a hundred Whites attended the services at Easter. In general the attitude of the Europeans had changed, and it is noted with surprise in the diary of Berea for 1872 that Europeans attended a service together with the Coloured inhabitants.

The missionaries thus had opportunities to influence the religious views of their neighbour. They used hotten-tots to disperse tracts among the farmers. As the wealthier the colonists grew in relation to the Coloureds the less frequently did this take place. Colonists soon showed that they were genuinely affected by the teaching of the brethren and special meetings were held for them. In the early 1830ies the missionaries discerned a definite awakening among the farmers. The Brethren frequently held burial services for deceased colonists in the vicinity. The religious influence of the missionaries over the colonists grew less when the colonists were better served by their own clergy.

The services of the brethren on the outstations were also attended by colonists. In deed some farmers made it possible for the brethren to found outstations on their farms. Healthy colonists occasionally gave valuable presents, for instance Baron Ludwig who presented English, Dutch and German books for the Genadendal library and a bell ringing apparatus for Kopjes Kasteel. During the famine in 1822, Landdrost Schönberg of Swellendam opened a subscription for the...
poor in Genadendal. The colonists, were, however, criticised by the Rev. J. Murray for not leading a Christian life themselves and thus setting an example to their servants.

There was bound to be some social contact between the farmers and the Coloured inhabitants of the settlement. The missionaries realised from the very beginning that it caused vice and even crime among their charges when they went out to work for the farmers. There were the detrimental effects of migratory labour on family life. Both men and women labourers had to sleep in one room. By the tot system the labourers were given wine four to five times a day and sometimes instead of wages. No wonder missionaries expected to learn of regrettable incidents during the harvest season. One farmer gave his labourers plenty of wine but hardly ever money and when they wished to leave he made out that they owed him money.

'Canteens' were licensed in the neighbourhood of Genadendal through the efforts of enemies of the mission on the licensing boards. The missionaries criticised the farmers in their accounts because they did not give their coloured labourers enough wages and in fact despised them.

The European entered the village for other than religious reasons. In 1844 for instance a European arrived with a wagon and brazenly commenced to sell wine ignoring the requests of the Brethren and 'opzieners' to leave. In 1834 a White youth had to be ejected by the 'opzieners' because he was found in houses where there were women only. In the 1860ies the young colonists apparently caused many disturbances. The Brethren had to stop a number of dances organised by whites in the village for their amusement. In 1869 the missionaries feared the visit of European at
crew -ear because of the disturbances they caused.

:here were some moves made by colonists aimed at putting difficulties in the way of the missionaries. The attempt by the colonists to introduce individual tenure at Genadendal in Parliament has been mentioned. The interrogation of farmer neighbours showed that the instigators of this move had received most of their information from Christian Reitz, who had been excluded from the congregation and had caused the missionaries serious trouble by opening a 'canteen' in the village. The farmers objected to the store at Genadendal and the supply of wine to the Coloureds by the missionaries. An influential enemy of the mission caused the replacement of the Coloured constable by a white constable. Colonists who looked at the mission were at the bottoms of the movement to grant liquor licenses to inhabitants of Greyton. The aim was to make the stationing of a magistrate there necessary as it was felt that the magistrate at Caledon was too sympathetic towards the Coloureds.

According to the missionaries a malignant attack on Genadendal by a colonist in the Divisional Council was the reason for the high assessment of Genadendal for the purpose of a road tax. Impassioned attacks on the mission sometimes appeared in the press. In some cases the accusations were refuted by outsiders. Some of the outcries led to government investigations of conditions at the station. Usually the conduct of the missionaries and the inhabitants of Genadendal was vindicated on such occasions.

Genadendal was never the cause for a political controversy.

The records of the United Brethren fission hardly refer to the outburst against

were especially excepted from the accusations which an agricultural society made in 1627 against the missionaries in general. Political attacks on the Moravian stations only became serious during the 1850ies but were never widespread. A non-farming section of the white population was highly sympathetic to the missionaries. The most important group of people who visited Genadendal and expressed admiration for the work done there consisted of high officials.

Frequently, especially in the early years, such people as officers from the Cape Town garrison or from ships in the harbour called. Frequently the village was visited by persons from overseas and often officials of the Indian government. In many cases they presented the mission with generous sums of money. After 1846 these visits decreased as a result of the introduction of a steamship route via the iced sea. The missionaries remark with regret that this development was a loss to (ape Town and to the mission. The missionaries also received visits of sympathisers such as the la'. Schmidt, who had acted as their host in 1792, and Thomas Pringle, who was laid up in Genadendal after breaking his leg. The early relations of the Moravian with religious fellow workers were on the whole fairly cordial. In spite of Calvinist prejudice against the United Brethren some leading predikants, such as an bier and Jos, were great friends of the first missionaries. These relations improved rapidly after the inception of the South African Missionary Society. Relations with the Lutheran pastors in Cape Town were always of the happiest. Then Genadendal had become famous it was visited by
many missionaries, some of whom came for help and advice. They impressed Campbell with their institution. Dr. Philip visited Uitenhage three times and once spoke in English to those who could follow him in that language. Converted Basusus of the kiwis Evangelical Society, who had come with their reachers, talked to the congregation in their own tongue 'with the aid of interpreters. The inhabitants of the village took a great interest in the visit of the Reverend Head junior. Relations with the Berlin and Rhenish societies were always excellent.

76) F. Accs. LVI: Diary G., Jul. - Dec., 1812.
reason for the favour with which the
Government regarded the colonists looked upon the mission settlement
at Genadendal were that it and the other Moravian stations, were supposed to be economically sound and that the
inhabitants were taught to work and be thrifty. His opinion was usually arrived at after a comparison of Genadendal with Bethelsdorp. He Moravian missionaries themselves did not believe that the Bethelsdorp Hottentots were less industrious. Then a comparison like this is made it is necessary to take into account the time when the comparison was made. It must be remembered that Baviaanskloof-Ganadendal had ten years start of Bethelsdorp. Most of the criticisms of the latter station are found in early documents. In Genadendal the diligence of the Hottentots could easily be observed in the workshops, whereas the Bethelsdorp Coloureds were mainly agricultural workers. There were no village industries for lack of water and of suitable missionaries to teach trades. Moreover, the geographical factor must be considered. Genadendal in comparison with Bethelsdorp had undoubtedly the more advantageous setting. It had a fairly abundant supply of water. Water was available for the mill and irrigation. Although the soil was not very fertile it could be irrigated and in Loe Cale this is often important. Thus Breutel could write of Genadendal:

he gardens, which are well stocked with excellent vegetables, as well as with orange, peach, and rose-trees, afford sustenance to the body and pleasure to the eyes. A fine plantation of forest-trees surrounds them, Genadendal is proof of what industry can effect in south Africa, where an apple supply of water can be obtained, and in a locality in which the temperate and the torrid zones see to join hands."

Genadendal was, however, not a Garden of Eden and, especially in the beginning the Missionaries and use inhabitants had to contend with many difficulties caused by their environment. Be abundance of water was not an unmixed blessing. Fairly frequently the gardens and cornlands were damaged by floods, Such as for instance in 101 and in 1378 en a hundred gardens and many houses are

4) F. A. C. A. XXXIII, 1854: Breutel to Mission Directory (no date).
In the early years the agricultural and pastoral activities of the inhabitants were hampered by the attacks of wild animals. After the Hottentots had killed a large 'wolf' (probably a leopard) in March, 1799 the missionaries exclaimed:

"we were glad to have destroyed so great an enemy to our stock, for there are enough of other descriptions, tigers, jackals, mongooses, ... with whom we are continually at war."

Raboons were a menace to the gardens as late as 1890, and a leopared was seen in the grounds at the same time.7

Another great danger that was continually threatening Genadendal was the threat of veld fires. The parched veld during the summer increased the danger of fires.8 When a veld fire threatened the bell on the 'werft' was rung and as many people as possible would gather together to fight it.9 The village possessed a fire-engine as early as 1812 but it was of little use against grass fires.10 The buildings on the 'werft' and in the settlement with their thatched roofs were and still are very vulnerable to fire. That they were never burnt down even after the fire-fighters had given up hope of saving them was felt to be due to divine intervention. In January, 1878 the wind turned;11 on another occasions there was rain.12

The money required to run the institution came from both outside and inside Genadendal. The main income was derived from contributions of the Elder's Conference and from wealthy sympathisers of the mission. In the early years funds were made available by the Society of Friends of the United Brethren Mission in Holland. It together with the Kays settlement raised most of the money required at Baviaanskloof up till 1800.13 Later other societies such as the London Association of Friends of the United Brethren Missions also played an important part in the collection of funds.14

7) F. Accs. No. 4, 1890: Son of Dr. Drury, G., 29th May, 1890.
10) F. Accs. LXV: Diary G., 1812.
Frequently the accounts enumerate gifts of clothing, tiles and books from these societies. Individuals also gave gifts, such as a fire-engine, medicines, a handmill, an organ for the Genadendal church, and clothing. The distribution of presents of clothing or similar gifts was difficult. In some cases such gifts were sold at low prices and the money was used for the poor box.

In times of need special remissions were made by the Elder's Conference and the friends of the mission. This was the case in the disastrous years of 1823-5. Special donations were also made when a new church was erected, for example at Berea, or for the present Church in Genadendal.

A certain amount of financial help was offered from within the Cape Colony. In 1795 and in 1799-1800 the government of the Colony provided the timber necessary for the erection of a church gratis. In the building of the first house at Baviaanskloof, Reunissen procured the building material for the first house at reduced prices.

Before 1846 an important source of such money was made by donations of visitors, mostly officials from India. Slaves, in a position to earn money, also made contributions for the poor. A number of colonists sympathetic towards the mission sent aid. Landdrost Schönberg and Baron Ludwig have been mentioned. Later certain farmers provided land for outstations and contributed money for the erection of chapels.

The Coloured members of the congregations on the outstations

also collected funds. 28)

The missionaries aim from the beginning was to make the settlement self-sufficient. They therefore, commenced to teach the congregation to pay its way. The first suggestion to the chapel-servants and the congregation was to pay for the lighting of the church. Consequently the first church fee consisted of either a certain weight of tallow to be supplied when stock was slaughtered or sixpence a year. 29) In 1802 the members of the congregation decided to pay an annual church fee of one shilling. 30) In the course of time the amount was increased until in June, 1856 it was fixed at 6 shillings for men over 17 years and 4 shillings for women. 31) However, the willingness to pay was no longer general. In 1870 some members sent a petition to the Governor complaining that they were being forced to pay the fee. 32) Although the petition was not considered by the Governor the contribution was not paid by approximately thirty percent of the members. 33) There were regular collections in church for special purposes, for instance, for mission work in other fields, 34) and the collection of funds for the new church between 1891 and 1893. The Hottentots in the village managed to raise a sum of £225 over a period of three years for their new church. 35)

The idea of work for the good of the congregation was always present. When the first church was built in 1799-1800 the women and children gathered stones for the foundation and burnt bricks while the men transported the timber granted by the government. 36) The present church was also built with the help of members of the congregation. 37) Repair work and improvements on buildings and property used by the congregation were also carried out on a co-operative basis for example the upkeep of the burial ground. 38)
As the mission was to be self-sufficient in order to grow their own food the first three Brethren commenced with preparation of ground for a garden in March, 1793, and later planted a vineyard. Soon the garden supplied most of their provisions and was admired by visitors. Their first attempts to keep cattle and goats were not successful, but soon the Brethren learnt how to look after them. The missionaries, however, it should be noted never used the land for their own profit.

The 'industries' established on the station were to earn a profit to defray expenses incurred on the station. The energetic Kühnel established the knife manufacturing department. By 1797 his knives were being bought and sold in Cape Town at double the price. Kühnel had to make the tools necessary to shape the knives himself, with the help of his Hottentot labourers. In the beginning these knives produced the main income on the station. In 1803, however, they brought in only 300-400 rds. annually. Later the manufacture of cutlery became less important.

A smithy was built in 1811. When Latrobe visited the settlement the combined cutlery and smithy employed 14 Hottentots. The smithy was mainly used to manufacture ironwork needed on the station. In 1847 ploughshares were produced in it.

The mill, built in 1797 to grind corn for the Hottentots and the missionaries was soon used by colonists as well. The mill was continually being improved. In 1818

new millstones from the mine arrived. They were both better and cheaper than those hewn at Stellenbosch.\(^{54}\) In 1826 a new and larger water-wheel for the mill was fitted,\(^{55}\) and in 1834 a new mill was erected by Klinghardt.\(^{56}\) The mill was still in use a few years ago.\(^{57}\)

Of the other trades introduced with the double aim of training craftsmen and of bringing in money for the mission the joiner's shop erected in 1811\(^{58}\) and the tannery, must be mentioned. An Irishman was engaged for the express purpose of starting the latter in 1828.\(^{59}\) It was still producing in 1864.\(^{60}\) Bigge mentions wheelwrights in 1825,\(^{61}\) but wagon-making soon ceased to be a profitable undertaking.

In 1862 Lady Duff Gordon met "a carpenter, a cabinet-maker, a shoemaker, a storekeeper...\(^{62}\) Towards the end of the century new industries were introduced by the missionaries to provide the inhabitants with a means of making a living.

The 'store' was run by the missionaries for the good of the Hottentots. Since the Hottentots at first had no sense of the value of money they were easily duped by the farmers who supplied them with necessities. The missionaries strongly advised the villagers to buy from their store.\(^{63}\) The 'store' did, however, assist the station in its efforts towards self-support.\(^{64}\)

The money derived from the Mission Directory and from the station's 'industries' was spent in various ways. Clothing and food for the 'missionary family' was not very expensive as the missionaries only received small salaries. When buildings had to be erected the expenses rose.\(^{65}\) In

1808 the task of making Genadendal financially independent was judged to be impossible. The only income from the station had been the 300-400 Rds. from Mühle's knives. In 1820, however, when the expenses of the 'missionary family' amounted to 6,000 Rds. or £500 the deficit was only £19. Genadendal reports a surplus in 1834 only, but it is a fairly large sum of £400 and it covered all the deficits in the Western Province in that year. In 1855, when the Berea church was erected the station definitely needed outside financial aid. In 1882 the Western Province stations had again been financially independent for a number of years, but the 1880ies brought depression to the Cape and the Western Province stations were not self-supporting again till 1890. This 'financial independence' refers only to current expenditure.

To judge the standard of living at Genadendal the following fact should be considered. The village grew haphazardly, mainly on the sides of the valley so that the lower lying valuable irrigable garden land could be reserved for cultivation. It differs in this respect from its sister stations at Ano and Alia. Lichtenstein described the village as follows:

"Zweihunder Häuser und Hütten mit daran stossenden kleinen Gärten, in ordentliche Straßen vertheilt, geben diesem Ort volkommen das Ansehe eines europäischen Dorfes." A description of the village at the end of the century shows that it had changed little:

76) H. Lichtenstein, I, p. 246-7. (The two hundred houses and huts with the adjoining small garden plots, divided neatly into streets, gave the place the atmosphere of a European village.)
The village, with its fruitful gardens, wonderfully beautiful just now in their fresh young verdure, adjoins the missionary quarter, and fills the basin of the valley in every direction. Gerardendal has three thousand inhabitants, and is divided into several sections, Sevenfontein, Klipperstrasse, Vlei, Bergstrasse and Hornlandskloof.

The number of houses at Baviaansklouf in 1799 was 228, these were probably huts. Later counted 256 "cottages and huts." In 1820 there are 283 houses and 90 of these are walled. During the critical years, and after the numbers of dwellings decreased appreciably. In that year there were only 246 houses of which 85 were walled. This tendency continued till 1826, when there were only 219 houses in the village. After that, however, there was a gradual increase until in 1833 there are again 253 dwellings of which 117 are walled. The emancipation of the slaves had an effect on the number of houses in the village. In 1847 there were 290 larger and smaller houses and 217 huts. There was no great increase after this and in 1875 a government census showed that there were 482 houses.

There were thus two types of houses in the village. In 1798 they were described as follows:

"The huts were of clay, thatched with rushes, some square as in Ireland, others round in the original Rottenfot fashion, and brought up to the top without rushes, a hole only being left in the middle to serve as a vent, and another for the door."

The huts were built in the native manner by driving poles into the ground in a circle, twelve feet in diameter, bending them and tying them at the top so that the centre of the framework was five feet from the ground. This structure was covered with matting and skins and it was necessary to

88) Lady Anne Barnard, p. 185.
creep into the hole left on the one side. Most of the walled houses were probably built in the following manner. Clay was broken up with plough and harrow. The material won in this way was drawn to the building site by oxen in a bullock's hide. The clay was then formed into bricks and the wall built a foot high on the first day after which it had to be left to dry for a day. The wall was gradually raised until the roof could be put on. In some cases the gable ends were built with burnt bricks. The cottages were usually divided into two apartments, one for cooking and sleeping and the other for storing field and garden products. Some of the houses were not very well built and in some cases collapsed, injuring the inmates. The building of solid houses was subsidised by the mission from money received in the difficult years of 1822-3. Nevertheless many of the houses were still of rushes and clay in 1842. The subsidising of houses was continued till 1855 when the money was appropriated for schools and churches.

Some of the better off residents had fairly respectable houses. Lichtenstein says that the chapel-servants, usually the most well-to-do, had houses very similar to those of the colonists on the border. Lady Duff Gordon lived in such a house in 1862:

"The cottage was thus:— One large hall; my bedroom on the right, Sally's (her English maid) on the left; the kitchen behind me; Miss Steitz behind Sally, mud floors daintily washed over with fresh cow-dung; ceiling of big rafters just as they had grown, on which rested bamboo canes close together across the rafters, and bound together between each with transverse bamboo—a pretty b e e h i v e effect; at top, mud again, and then a high thatched roof and a loft or sheds for forage, &c., the walls of course mud, very thick and white washed."

In 1873 a house was built by one of the inhabitants which cost £103 and for which the owner paid cash. But these were exceptions.

The mud houses sometimes did not stand up to heavy rain as in April, 1878.

Lady Anne Barnard tells us what the inside of the simpler Hottentot huts looked like.

"I entered one or two of the round ones, the Hottentots were out; working in the field; furniture there was none, a few sticks were in the centre to boil their kettles, and tied to the sticks of the roof were a few skins, some calabashes, an iron pot, a couple of spoons made of bits of wood, to the end of which a top shell was spliced and tied on, some calabash ladies and bowls."

The fireplaces were open and raised a foot above the ground. In the evening the inhabitants of the dwelling sat on the raised fire place feeding the fire with twigs. As a result children often fell in and were burned, sometimes even to death.

In 1862, the cottages were described thus:

"All were neat and clean, with good dressers of crockery; the very poorest, like the worst in Welbridge sandsites; but they had no glass windows, only a wooden shutter, and no doors; a calico curtain, or a sort of hurdle supplying its place."

The general impression the houses made on a visitor in 1892 is not much different:

"The houses of the natives ... have mud walls. Mother Earth also constitutes the floor. Though these are all of the same primitive material, and but one storey in height, one sees great variety, for example, in the number, size, and form of the windows. Some indeed have no windows whatever."
but receive air and light only through the door. ... Their dwellings consist of one living room, one sleeping room and a kitchen; most of them are kept neat and furnished with tables and clean beds.\(^{101}\)

When the missionaries arrived the Hottentots were clothed in sheepskins. One small skin was worn around the waist while another, which was discarded for work, was draped over the shoulders. Their children were carried on the backs of the mothers under the cover of a sheepskin held up by a thong. Both sexes carried bags made of gazelle skins for tobacco-pipe, flint and steel. There was vermin in the sheepskin clothing of the Hottentots. The only way they knew to get rid of it was to beat the skins with sticks.

The missionaries tried to promote cleanliness among their charges.\(^{102}\) They continued to wear their sheepskins on weekdays, but soon they began to wear clothes they received from the farmer’s wives in lieu of payment on Sundays.\(^{103}\) Thus when in 1798 Lady Anne Barnard attended an evening service on a week-day, the congregation were all "dressed in the skins of animals," on a Sunday about half of the three hundred people in the congregation were dressed "in coarse printed cottons, and the other half in sheep-skin dresses,..."\(^{104}\) Lichtenstein noticed that the well to do wore European dress whilst the poorer class still wore skins; "Sie gehen nach Bauernart in leinenen Hemden und ledernen Beinkleidern und tragen Hüte, die Frauen in weissen Mützen, baumwollenen Capeline mit langen Aermeln und Hauben. Die niedrigere, rohere Klasse kleidet sich zwar noch in Felle, doch wird durchaus auf Reinlichkeit gehalten und keine Nacktheit geduldet."\(^{105}\)

In Utrecho’s time some men were still clothed in karosses and leather aprons. Most of the residents wore European dress for the Sunday services and even dressed their children in linen and calico shirts and dresses.\(^{106}\) In 1842 the

(They dress after the 'peasant' fashion in linen jackets and leather trousers and carry hats, the women go in woollen skirts, and cotton blouses with long sleeves and bonnets. The lower, more primitive class still wear skins, but cleanliness is expected of them and no nakedness is permitted.)

\(^{107}\) J. J. Utrecho, p. 93-4.
Brethren themselves complain that the boys often wore nothing but a shirt or a pair of trousers, the girls only a dress of cotton and they blame the inhabitants' lack of thrift for this. 108) In 1862 Lady Duff Gordon was impressed with the smartness of dress of the congregation and she praises the cleanliness of the residents.

"Also they are very clean people, addicted to tubing more than any others... They are also far cleaner in their huts than any but the very best English poor." 109)

The efforts of the Brethren to teach their wards cleanliness had thus had a measure of success.

Buchner was surprised at the number of people at Genadendal who suffered from lung and bronchial diseases. He ascribed the frequency of this affliction to their irregular habits of living. 110) Presumably a great number were affected by tuberculosis. 111) Genadendal was a haven for lepers as late as 1861. 112) The village was occasionally ravaged by epidemics and a disease, apparently typhoid fever caused the death of 162 Hottentots in 1800. 113) From 1865 to 1867 the same disease returned. It had a disastrous effect on the income of the village as farmers would not employ labourers from Genadendal for fear of infection. 114) The first severe outbreak of small-pox in the settlement was in 1858. 115) In spite of the efforts of Brother Höser, who had 3,000 inhabitants vaccinated in the course of a few days, 116) there were 29 cases of whom 10 were fatal. 117) There was a second outbreak of this disease in 1882 when the 'Drummond Castle' brought the infection to the Cape. There were 235 cases of whom 64 died. The missionaries had to organize relief. Some colonists sent help, five sent

money and one wagon load of fish. A member of the Upper House persuaded the government to place the sum of £70 at the disposal of the missionaries.\(^{118}\) Shortly before Genadendal had suffered from an attack of epidemic dysentery which started in 1880\(^{119}\) and raged throughout 1881.\(^{120}\)

The village also experienced epidemics of whooping-cough and measles. The missionaries blamed the careless nursing of the children by their parents as the cause of many deaths.\(^{121}\)

In good years the diet of the inhabitants of Genadendal was fairly balanced. The staple food was wheat as is evident from the anxiety with which the missionaries followed the price of corn.\(^{122}\) In 1865 Hallbeck calculated the consumption of a thrifty family with two non-earning children. He found that their weekly average consumption was one 'emmer' (5.67) litres of wheat, 4 lbs. meat, 3-4 lbs. rice, and 2-3 lbs mutton fat besides the vegetables that they produced in their garden.\(^{123}\) In a good fruit season Genadendal had an abundance of deciduous and citrus fruit.\(^{124}\) The inhabitants were, however, not at a loss when the harvest of wheat was bad. They fell back on 'veldkoos' and gathered edible bulbs.\(^{125}\) In 1861 during a famine the inhabitants of the village had to fall back on acorns and roots for subsistence.\(^{126}\) There were also wild almonds which when cooked were nourishing. In the difficult 1820s these were an important part of the diet of the villagers.\(^{127}\) When hard pressed the inhabitants of Genadendal migrated to the coast where they could subsist on fish.\(^{128}\)

A large amount of the food supply of the Hottentots

came from the gardens and arable land of the settlement, especially after they had learnt the rudiments of agriculture from the Brethren. From the very earliest beginnings, however, there was a certain amount of migratory labour, especially during the harvest season. As the population increased and the demand for clothing and other commodities grew the proportion of people, especially men, who earned their living outside the settlement increased.

The labourers from Genadendal enjoyed a very good reputation for diligence and industriousness among the European population. In 1798 the Brethren claimed that the farmers preferred to employ Christian Hottentots from Genadendal. A certain section of the farmers no longer thought so in 1856.

The labourers from the institution probably merit the reputation they enjoyed. Hallbeck was of the opinion that the converts of other societies were probably as diligent. Another reason for their dependability was that the Genadendalers hailed from a more settled community than existed on stations nearer to the border of the Colony. The section of the Cape where it was situated was tranquil.

The men who left Genadendal to seek work found employment mainly as agricultural labourers until after the discovery of diamonds in the Kimberley area in 1869.

In 1797 Barrow stated that "some hire themselves out by the week, month, or year, to the neighbouring peasantry." Soon there was a regular exodus during the ploughing and harvest months. The missionaries realised that the Hottentots were forced to leave the settlement in order to earn a living, but they were of the opinion that with a little more diligence they could have subsisted on the land at the institution.

During the ploughing season mainly men went out to work. In April, 1825 out of 1242 inhabitants only 923 were present, but of the 320 persons absent half were

away for the ploughing season only.\(^{137}\) At harvest increasingly large numbers of both sexes and all ages left the village leaving behind only those who had to take care of the gardens. The harvesting usually began in November but sometimes already in October.\(^{138}\) The labourers returned in the beginning of January. The schools and classes for instruction were normally resumed in the second week of January.\(^{139}\) Difficult times caused an increase in the number of absentee labourers. They also increased the length of time they stayed away as then they went to more distant parts.\(^{140}\) Bad harvests affected the labourers in a twofold way: their own gardens produced little and the amount of work they were able to get outside the settlement was reduced.\(^{141}\)

Before 1828 the Genadendal labourers must have been in a better position to bargain for wages than the Hottentots who lived on the farms.\(^{142}\) In 1823 labourers on the farms received 14d. a day,\(^{143}\) and in 1843 they received one Ryksdaler or 15d. They received besides meat three times a day and wine five times a day.\(^{144}\) Some of the labourers, however, were in debt to the colonists and had to work off their debt throughout the year.\(^{145}\) In some cases wine was given instead of money.\(^{146}\) After 1859 the wages were paid by mines and in the railways proved more attractive than those paid by farmers.\(^{147}\)

After 1870, other factors aggravated the situation. Agricultural machinery was being introduced into the Western Cape. This meant less work on the farms.\(^{148}\) Besides, farm work did not afford a steady income right through the year.\(^{149}\)

When, as in the 1880s, little work could be had on the railways, Genadendal suffered. There was an arrear in tax of about 5,000 Marks (£250) in that year.\textsuperscript{150}

The first example of non-agricultural work outside Genadendal was found by the young men on the road to Grahamstown in 1845. They received a Rykader (1/6) a day plus food.\textsuperscript{151} Perhaps the soldiers might be classified as migratory labour, although they did not always get regularly paid. It was different with the wagon drivers in 1880-1 who worked for remuneration only.\textsuperscript{152}

The discovery of diamonds in the Kimberley area opened up new opportunities for work outside Genadendal. Already in 1859 some young men left for the mines.\textsuperscript{153}

The male population of Genadendal found a remunerative field of work when the railway from3ellington to the diamond fields was built from 1873 onwards.\textsuperscript{154} In 1876 there were as many as 400 labourers working on the line beyond Worcester. They earned from 2 to 5 shillings a day.\textsuperscript{155} The missionaries estimated that until the railway had reached Beaufort West, when a number of the villagers were discharged, about £1,000 reached Genadendal annually from the railways. Of course not all the money the labourers earned was sent to the village.\textsuperscript{156} Conditions along the line were in some cases terrible. Some of the contractors who employed Genadendalers exploited them ruthlessly with the result that some labourers did not have the money to pay for the return journey from Beaufort West to Genadendal. They had to walk back a distance of 500 miles!\textsuperscript{157}

As the line advanced into the interior it became increasingly difficult for men from Genadendal to find work on the railway. The exodus to the towns, especially Cape Town increased correspondingly. There were sufficient people in Cape Town for the erection of the Moravian church in 1886.\textsuperscript{158}

After that year the number of people going to Cape Town increased.\(^{159}\)

This, as has been pointed out, affected the ratios of men to women in the latter's favour. In 1826 at the festival for married couples 99 pairs took part, three single men (whose wives were absent) and 40 single women (whose husbands were absent).\(^{160}\) In 1880 the number of men absent had increased and the ratio of men to women among the communicants on the 25th January, was one to two. It is significant that most of the harvest workers had returned by this date.\(^{161}\)

In the later 1880ies, however, women began to leave the village in increasing numbers to seek work.\(^{162}\)

When the Brethren arrived at Baviaanskloof in 1792 the Hottentots were essentially cattle herding nomads. The missionaries were of the opinion that they would have to be taught agriculture. This was probably a realistic policy as the Hottentots were increasingly loosing land in which they could move around with their herds.

There were many difficulties in the way of teaching the Hottentots agriculture and a settled life. It was difficult to procure sufficient tools. These could only be had in Cape Town and there only at exorbitant prices. The missionaries lent out tools to the Hottentots. Some of these had been acquired from men like Martin Schmidt, their host in Cape Town, who presented them with 50 spades.\(^{163}\) However, by 1799 the Brethren had had some success. Peter Blessier reaped 25 bushels of wheat for every one he sowed. Most of the others reaped wheat twentifold that year, and the harvest of maize and vegetables was plentiful. Imitating the missionaries they planted fruit trees and vegetables such as beans, carrots, and potatoes. The missionaries taught them to discard their aversion for pork. They were beginning to keep pigs by 1799 and these provided them with more fat and more meat than their sheep. In spite of this the missionaries complain that "A lazy heathen nation is not soon trained to industry." Yet they are pleased that only a few lived on 'veldkos' and that most have accepted the idea of earning something with the work of their hands.\(^{164}\)

\(^{159}\) Beur. 3. 1889: Ber. G., Jan. - Jun., 1888.
helped them in preparing the land when they could. The fruitful land which reverted to the mission in 1802 was ditched by the Hottentots themselves. The missionaries organised the communal work and provided the workers with food.\textsuperscript{165} The Hottentots then had sufficient land for gardens and fields for wheat or maize.\textsuperscript{166}

Visitors to Baviaanskloof were unanimous in recording the success of the Brethren in teaching them the rudiments of agriculture. Lady Anne Barnard noticed that the small gardens of the Hottentots "were not very neat, but each one had something growing in it."\textsuperscript{167} Lichtenstein describes the agricultural system on the station as follows:

The way in which the missionaries inculcated industriousness was by rewarding the diligent with an increase in land and punishing the indolent by a diminution of their lots.\textsuperscript{169} This procedure was incorporated in the rules and regulations of the place\textsuperscript{170} and was still enforced in 1896.\textsuperscript{171}

Agriculture was practiced in two forms at Genendal.

There were the gardens in the valley of the Baviaanskloof river, and the wheat fields in the valley of the Sonderend river. If a garden was in good order the owner was reliable.\textsuperscript{172}

According to Hallbeck people who lived on the produce of their gardens, fields and livestock had the best houses and were in the best circumstances. This was no longer the case towards the end of the period under discussion. But Buchner was of the opinion that the gardens could, if properly worked produce enough for the inhabitants to have food and to make them able to exchange the excess for other necessities of life.

The main crops in the gardens were beans, and potatoes. In the beginning maize likewise was cultivated in the gardens. The orchards contained peach, pear, apricot and apple trees, as well as orange trees. In January the fruit harvest was usually in full swing and the inhabitants were busy drying their fruit on racks in front of their houses. The fruit crop was usually so abundant at harvest time that the inhabitants subsisted almost exclusively on it. Only the more well-to-do supplemented their diet with fish.

The account gives crop figures for two years, presumably average years.

To make the gardens sufficiently productive they had to be irrigated. As we have seen the missionaries irrigated their garden from the very beginning. The method was extended to the Hottentot gardens later on. In 1822 the diary remarks that by the distribution of water from the mill course the gardens had become very productive. When rust attacked the wheat in 1826 the irrigation system was improved by building three dams. The work on these dams was paid for by the Mission Directory. In 1834 a suggestion made by the missionaries to pay one shilling annually for the repair of the water furrows was accepted. In 1861 a dam 20 feet long, 180 feet long, and 318 feet long was completed.

six feet high and four feet wide was erected for the purpose of irrigation.\textsuperscript{182} In the end the whole village was reticulated with irrigation furrows running to the gardens.\textsuperscript{183}

If the gardens had in this manner been protected against droughts, it was much more difficult to protect them against rain and floods. In 1831 and 1839 for instance, floods damaged the gardens and destroyed part of the irrigation ditches and furrows.\textsuperscript{184} Damage to the irrigation system was always repaired by collective labour.\textsuperscript{185} When the crops in the gardens and fields failed, Genadendal had an extremely difficult year. This happened in 1822 when the winter crop failed and the gardens were inundated.\textsuperscript{186} In 1880 the drought even affected the gardens.\textsuperscript{187}

The whole family was usually engaged in garden work.\textsuperscript{188} As in more primitive societies a system of work parties was used. Five or six garden owners would concentrate their efforts on one garden, the owner of that garden providing both food and wines on the days the party worked for him. Then it moved on to the next garden. No wages were paid, the system worked on a basis of reciprocity.\textsuperscript{189}

In the 1820ies about 130 lots of arable land were allotted to inhabitants. Except in bad years over 100 were used each year. In 1820 it was felt that there was too little arable land available. Consequently one of the villagers rented a considerable piece of ground from a neighbouring farmer large enough for the sowing of 15 muids (sacks) of wheat.\textsuperscript{191} The lack of arable land is illustrated by the fact that in 1864 only 127 persons worked arable land while 495 persons owned gardens.\textsuperscript{192}

They learned ploughing from the Brethren. In July, 1820

Hallbeck saw seventeen ploughs in action. Presumably the tenants of fields co-operated in ploughing. 193) The ploughs manufactured in the smithy were suited to conditions at the Cape where an imported cast iron plough was difficult to repair. 194) The missionaries also taught the use of manure. Gradually the Hottentots learned to put these lessons into practice.

"There is a want of manure, and therefore, the land must be left to rest after two or three years' culture. The Hottentots have, however, endeavoured to remedy the evil, by putting straw into the beast-kraal, and otherwise taking better care to collect manure, to which, in former times, they could never be brought to attend." 195)

By these methods the inhabitants were able to produce sufficient cereal crops. In 1824 a villager who had sown half a muid harvested 35 muids (sacks). 196) In 1825 when the government provided seed corn because the crops had failed the previous year, the inhabitants gained 113 muid from 1½ muid of seed corn. 197) The detailed returns for the years 1864 and 1874 are given below.

1818 to 1826 was the most disastrous decade for agriculture at Genadendal. The harvest in 1815 had been bad, and the price of corn very high. 198) The harvest was attacked by rust and although the losses were not in 1829 brought some relief. 200) The 1820 harvest at Genadendal was attacked by rust and although the losses were not as great as in other parts of the Colony, the price of corn affected the economy of Genadendal detrimentally. 201) The missionaries had to

196) Rehr. 1, 1826: Ber. G., 1824.
provide corn at low prices for the 1821 ploughing season.\footnote{ibid., 5. 1823: Ber. G., Okt., 1821 - Mai, 1822.} In that year the effect of both drought and rust on the wheat in the whole of the Colony was disastrous. The missionaries feared a famine for Genadendal.\footnote{ibid., 1. 1824: Ber. G., Apr. - Dez., 1822.} There was such a lack of provisions in 1822 that the Brethren had to use money received from the Mission Board to feed the destitute. They provided three meals a week for a month with this money, but otherwise the Coloureds were forced to eat grass! The flooding of the gardens in that year brought greater misery.\footnote{ibid., 1. 1825: Ber. G., Apr. - Dez., 1825.} The famine became so bad that the government had to remit the taxes and granted 4,000 lbs. of rice and 15 bushels of seed corn for relief.\footnote{ibid., 1. 1839: Ber. G., Apr. - Dez., 1839.} This seed corn was soon communally because the individual share was too small to make sowing pay. The harvest in 1822 happened to be fairly good and the price of corn decreased considerably.\footnote{ibid., 1. 1824: Ber. G., Apr. - Dez., 1822.} A large sum of money was received as relief from friends overseas, especially from England. This was used to rehabilitate Genadendal. A certain amount was allocated for the purchase of more seed corn to provide the owners of fields with seed corn free of charge on condition that they returned an equal amount in the following year. Another sum was diverted to the smithy to enable it to repair ploughs free of charge. Bullocks were purchased to make ploughing possible for people who had lost draught cattle during the droughts and the famine.\footnote{ibid., 5. 1825: Ber. G., 15th Nov., 1825; Nchr. 1. 1823: Ber. G., Apr., 1822.} Unfortunately in 1823 the wheat harvest was almost completely destroyed by rust.\footnote{ibid., 1. 1824: Ber. G., Apr. - Dez., 1822.} In 1825 and 1826 rust again destroyed most of their crops.\footnote{ibid., 5. 1841: Ber. G., 1839.} After 1826 there was an improvement. The inhabitants had learnt to rely more on their vegetable gardens which were safe from the rust.

In 1839 the crops in the 'saailande' were destroyed by rust again.\footnote{ibid., 5. 1825: Ber. G., 15th Nov., 1825; Nchr. 1. 1823: Ber. G., Apr. - Dez., 1823.} Today most of the 'saailande' have fallen into

\end{itemize}
Most of the land pertaining to the institution was in fact unsuitable for agriculture and could not be improved with the means the missionaries had at their disposal.\textsuperscript{212} The Hottentots who resorted to Genadendal brought their cattle and their sheep with them and the land soon became overstocked.\textsuperscript{213} The pasturage, remaining undivided, was used communally. The missionaries tried to get the stock owners to contribute towards the wages of a cattle-herd in order that the children would not be used for that purpose and consequently miss school. But it became difficult to collect the necessary money.\textsuperscript{214}

In spite of the difficulty of keeping cattle in the Cape Colony especially at Genadendal, Genadendal had a fairly large number of cattle. One of the reasons was that the Coloureds as a matter of prestige liked to own a span of oxen.\textsuperscript{215}

The figures reveal that merino sheep were successfully introduced at Genadendal in the second half of the century. Genadendal's only real money product was in fact wool and the production figures for 1864-5 and 1874 are as follows:

- 1864-5: \(2937 \text{ lbs.}^{217}\)
- 1875: \(5696 \text{ lbs.}^{217}\)

There can hardly have been any wool production before the 1850ies.

Genadendal was not a favourable environment for cattle or horses. Their numbers were often depleted by droughts, floods and pests. In 1822 the stock owners lost or had to

slaughter 200 out of 400 of their cattle. In 1828 it was again necessary to slaughter the weak animals because of the drought and the conditions in 1860 affected stock owners in a similar manner.

In 1839 an epidemic caused Genadal to lose a large number of horses. In 1854 a lung disease destroyed many cattle. In the following year a similar disease killed between 60 and 80 horses. In the year 1877 a cattle disease destroying cattle raged in Genadal while it was suffering under the effects of a drought.

The description of the Genadal agricultural system is sufficient proof that the village could never have subsisted from the produce of its fields, gardens and livestock alone. Therefore, although there were private enterprises in the settlement, the missionaries gave employment to some in the workshops. The missionary households provided a certain amount of opportunities for work. Some servants faithfully served in homes and in the communal kitchen for periods of 25 to 30 years. The main source of employment provided by the mission, however, were the trades set up to make the station self-supporting. These have already been mentioned in connection with the mission economy. They also played a part in the economy of the community. The cutlery, for instance, commenced in 1797, employed four men in 1802-3. In 1815 the combined smithy and cutlery had fourteen workers. Some were engaged in vending the knives among the colonists. The tannery was commenced with the special purpose of providing an occupation for some of the Coloured families in the village.

Besides aiming at earning a profit for the mission and giving employment to the residents, the industries had as their third aim the training of individual tradesmen, especially during Hallbeck's period. Hallbeck writes that cut-
lers, smiths, joiners, wheelwrights and shoemakers were 'trained' at Genadendal and that other tradesmen such as masons, carpenters, thatchers, sawyers were encouraged.229) He also considered the teaching of writing and arithmetic essential in the school 'particularly ... for those who carry on trades on their own accounts'.230) The main reason for failing to establish an independent class of artisans at Genadendal was that their products found no market. Genadendal produced waggons but not in sufficient numbers to compete with financially stronger undertakings. The village furthermore did not have a large enough population to support a great number of independent tradesmen. The influx of mass produced European goods during the latter part of the century destroyed the opportunities for such independent crafts as had previously existed. There had been a few tailors in Genadendal but with the introduction of sewing machines in the 1870ies the women commenced sewing their own clothes.231

From the very beginning there were signs of persons who tried to make money independently by producing articles for sale even though they were only arts and brooms.232) Hallbeck referred to wheelwrights, smiths, carpenters, masons in 1819 but he added that labourers were more useful to the institution.233) The death of the sole shoemaker for the whole village is mentioned in 1826.234) Coloured masons and carpenters were employed in the building of the Hlim church in 1835.235) The number of artisans was at its highest in the thirties and forties. In 1836, Hallbeck stated before the Select Committee on Aborigines:-

"At the station where I live (Genadendal) one-half the population subsists by working at mechanical arts, cutlers, smiths, joiners, tanners, masons, carpenters, shoemakers, tailors and so on."236)

Probably many tradesmen also owned gardens and even left the village to work for farmers during the harvest season.

After the middle of the century the number of tradesmen dropped. Occasional references to craftsmen appear in the accounts e.g. to the joiner who replaced the brick

pillars in the church with wooden posts, to the wheelwright, who lost his tools and workshop in a fire in 1848, and to the tailor and the joiner to whom pupils of the Training School were apprenticed in 1855. An Irishman set up in Genadendal as a shoemaker and gave the pupils instruction until he died in 1853. In 1856 farmers who were interrogated before a parliamentary committee accused the institution of not training artisans and asserted that there were only one or two smiths in the village. Actually it is surprising that the smiths could exist beside the smithy of the Brethren. The crafts did not disappear completely. In 1892, when the new church was being erected, carpenters from the village superintended the woodwork.

The position as far as shopkeepers in the village were concerned was slightly different. The missionaries did not encourage them especially after they had had an unpleasant experience with a certain Negroni who had been allowed to keep an inn at Genadendal in 1799. They did not prohibit them, however. Both Europeans and Coloureds are known to have carried on business in the village. In 1856 there were four independent retail traders in the village. One of these was Christian Meiss who added a wine selling business to his shop and caused much of the trouble during the 1858 elections by opening his house to the election agents. He later added an inn in which Lady Duff Gordon lived when she visited Genadendal. The missionaries would not have had any objection to sober traders conscious of their responsibility toward the community. They were against traders who exercised a bad moral influence. In 1857 a European shop-keeper from Caledon opened business, but he closed it down again when his clerk defrauded him of £90.

247) Lady Duff Gordon, p. 102.
A few years later another European, who was living together with a Coloured girl opened a shop in the village and added a wine selling business. This again caused disturbances. The missionaries therefore cannot be blamed for trying to protect their wards from such disorderly traders. As the missionaries ran their own shop and provided the Coloureds with wine, it was surmised that they were doing this purely for their own benefit. The attacks levelled against them on this score were found to be unjustified.

"...we found that the charges of making undue profit in the sale of goods, and of selling or distributing improper quantities of liquor, were disproved, and that the candid explanation afforded by the intelligent and active superintendent of the Moravian mission was amply confirmed." 250

Such communal work as had to be performed was usually done at the instigation and under the supervision of the missionaries. In 1796 Rückmull cut trees to bridge the rivulets. He easily gathered a number of Hottentots prepared to help without any remuneration. 251) In September, 1801 after torrential rains arose set about repairing the roads with the help of all the Hottentot men he could muster. 252) The payment of a shilling for the maintenance of the irrigation furrows decided upon in 1834, was suggested by the Brethren. 253) The collective work on the drainage and irrigation system, in fighting fires, in building churches and repairing property pertaining to the congregation has already been described. Perhaps we may explain the willingness of the Hottentots to work on communal enterprises as a relic of tribal organisation, the missionaries superceding the tribal authorities in the management of collective work.

The best example of such unpaid collective work was the erection of the bridge over the Sondereend river. This bridge was commenced, with the financial help of visitors from India, 254) in 1819. A foot bridge 14 feet above the summer level of the water was completed by the end of 1820. Thirty-six Hottentots under the supervision of Brother Beinbrecht broke and transported the necessary stones and worked on the bridge in an exemplary manner. 255) Part of the wooden super-
structure was torn away in the heavy rains of 1821. As a result the piers were increased in height. The wagon bridge was finally finished in 1823. The work had been done exclusively by inhabitants of the village under the supervision of Reinbricht. The money had been donated to the institution the maintenance of the bridge long remained the responsibility of the village and had to be undertaken as voluntary work of the villagers. In 1861 the Divisional Council paid part of the cost of repair. In 1853 some farmers provided ox-wagons for the transport of earth. These contributions towards the upkeep of the bridge were not nearly sufficient. By 1881 the Divisional Council had still not accepted full responsibility for the bridge, although it had always been responsible for the road leading over it. The bridge thus became more of a liability than an asset to the community.

Another example of collective work was the planting of trees, commenced in 1818. The men were asked to volunteer and they responded splendidly. It was decided to sell the wood at a very low price to inhabitants who intended to build houses. The money obtained was to benefit the poor box. This plan was carried out in the year 1837.

The missionaries were in the main responsible for poor relief. Two chapel-servants were made responsible for the poor box. The inhabitants of the settlement appreciated their responsibility towards the poor. In 1866 some chapel-servants suggested the granting of maize and beans to the poor as the poor box was empty. In bad harvest years, it was impossible for the congregation to support its own poor. In 1878 the missionaries complain that the mission has to care for the poor of the congregation al-
though they are really not their responsibility. 266)

In difficult years the missionaries also provided relief for the community. In 1822 they provided the hungry with meals. The Hottentots were taught to appreciate this by requiring them to improve the irrigation furrows and the burial ground before receiving these meals. 267) In 1855 the Moravian institution of a love festival was used to feed the children of Berea. 268)

The missionaries interceded with the government when supplies ran low or taxes were too heavy. In 1822 after Hallbeck's representations the government granted rice and corn to the settlement. 269) In 1816 Latrobe obtained the remission of the poll-tax for the poor. 270) In 1866 intercession by the missionaries was no longer effective. They could not obtain a reduction of the road dues in that year. 271)

In Namak the missionaries controlled the farm labourers' wages and thus the whole economy of the community. This was not the case at Genadendal. 272) They were, however, prepared to sell buchu leaves collected by the inhabitants and which had to be sold in bulk. 273) In the difficult economic conditions of the late 1880ies, another A.G. Hettasch, tried to introduce new industries to open up new possibilities for earning money for the residents. An appeal was made to friends in Europe to donate £400 so that a castor oil industry and a silk industry could be started. 274) In 1886 6,000 castor oil seeds were planted and a plantation of 12,000 mulberry trees was progressing satisfactorily. In April of the same year castor oil presses arrived. 275) To-day there are hardly any relics of these late attempts at making the community self-sufficient again.

269) ibid., 5, 1823: Ber. G., Okt., 1821 - Mai 1822.
270) G.I. Latrobe, p. 385, 390.
It is obvious that Genadendal played a part in the economy of the Colony, although its importance decreased from 1840. Genadendal provided a reservoir of labour for the farms in the neighbourhood. The proximity of labour to these farms increased their value in comparison with similar tracts of land elsewhere. The advantage to the farmers was that although comparatively high wages had to be paid them during ploughing and harvest, it was not necessary to provide for their keep during the off season. The Genadendalers provided their share of labour on the roads, railways and mines. Though their main export was labour they exported other products such as wool and buchu leaves and they were of course consumers of farm produce, especially during bad harvest years, and in increasing amounts of trade commodities. The Coloureds did not prove without initiative. A resident earned his living outside Genadendal by cattle trading in 1833. In 1849 a transport rider lost seven oxen. Thus, if economic conditions seem to stagnate in the second half of the nineteenth century, the reason must not be sought in a falling off of missionary effort or in the listlessness of the Coloured residents. The tendency was the result of the general economic development of the country in that period.

VIII.
Education at Genadendal.

Education was one of the most important activities of the Brethren. Their system of education had as its aim the Christianization of the Coloureds. Soon after the arrival of the first three missionaries at Bevlemanskloof, they started a school. At first they instructed only the adults. They had 25 pupils on the first day. When a Hottentot disobeyed or misbehaved, his book was taken away from him and he was excluded from the school. Towards the end of March, 1793 they commenced instructing the children. 1) A similar system of discipline was followed with them. Once when there was general disobedience, the Brethren threatened to discontinue their school altogether. 2) Already the school had to be closed during the harvesting season. 3) The Brethren met with much success. When the Reverend Mr. Voss visited the institution in 1799, 300 children attended. 4)

From these beginnings developed the school for the bigger boys and girls and later the Infant school. Besides these there were evening classes and Sunday schools to refresh the memories of those who had left school. The Training School was founded in 1838, and in 1860 the printing press was added. As has been mentioned Halbeck was of the opinion that the Coloured children at Genadendal were just as capable as those in an English village. 5)

In 1814 the first school house for the boys and girls was erected with the help of money collected by the colonial chaplain. An appeal was made for slates and writing material from England "and anything else, that is useful for the furnishing of a school upon Dr. Bell and Mr. Lancaster's principle." 6) Latrobe found that the boys could spell and read well. The children were sincerely attached to their teachers and the girls shed tears when Father Marxveld was replaced by Brother Leitner. 7) In 1820 127 boys and 150 girls attended the school. 8) The attendance at the schools was affected by the seasons especially at harvest time. It

114.

decreascd appreciably during the 1822 famine. 9) At first the average attendance was not very satisfactory. Of the 158 boys and 137 girls registered in the school in 1825 only about 150 attended daily. 10) In 1823 the examinations showed that about half the children could read. 11) Diligent pupils were rewarded with clothes sent by benefactors in Europe, mainly in England. 12)

During the 1830ies important additions and improvements were made in the educational system. In November, 1831 an infant school was founded by halibek which was soon filled by the children between 3 and 5 years of age. 13) It had a beneficial influence on the number of children that attended the boys' and girls' schools. 14) Before 1832 coloured assistants worked in the schools already. 15) They now became more numerous and influential. In 1834 one of them Ezechiel steiffer, succeeded one of the missionaries supervising the boys' school. 16) The teaching of writing and arithmetic, hitherto neglected, was improved. 17) In 1837 lessons in the English language were introduced in the boys' and girls' schools. 18)

By 1854 the average attendance had increased from 60-70 to 100-110 in the boys' school and in the girls' school it had increased to 120-130 daily. 19) In 1836 there were 150 children in the infant school, 130 pupils in the girls' school and 120 in the boys' school. 20) There was also any improvement in the proficiency of the pupils. In March, 1850 of the 121 girls who attended an examination 53 could read. Of a total of 106 boys 41 could read. 21) The corresponding figures for the year 1840 were: of 126 girls 94 could read and of these 43 could read the New Testament in English. Of 103 boys 50 could read Dutch and of these 40 could read

English. Some of the older boys were proficient in writing and arithmetic. 22) In the late 1840ies the first assistants from the training School were appointed to the Genadendal schools. 23) Besides women were appointed to help maintain discipline in the schools. Still the missionaries complained that boys were employed by their parents to earn money or to do work at home and in the fields, 24) especially during the ploughing season. 25) Progress was made, however, and an increasing proportion of the boys and girls were able to write. 26) In 1848 the official returns were as follows:

In 1848 36 pupils who could read, write and do some arithmetic left the school. Besides they had been instructed in religion, geography music and drawing. 27)

The average attendance decreased after 1848. In 1853 of 192 boys a daily attendance of 129 was recorded, of 203 girls 156 attended daily. 28) In 1864 attendance was even worse. 99 boys and 47 girls did not attend a quarter of the lessons and 19 boys and 11 girls did not attend at all. Besides, of the 42 boys discharge, 24 could not read and of the 49 girls discharge, 13 were in the same position. 29) In 1870 only 44 of the 74 discharge children could not read. 30) After representative government had been granted to the Colony the government took more interest in the schools at the institution. In 1861 the schools were voted an increased annual grant of £75, 31) and the Superintendent of Education, Mr. Dale, inspected them. 32) At the same time a new school

was founded for the children in Berea. With the help of money from England the building was completed in July, 1866.\textsuperscript{33}

By 1880 a definite improvement had been brought about. The inspector classed the school as one of the best primary schools in the Colony.\textsuperscript{34} The daily attendance at the schools increased appreciably. During the 1870s the highest attendance at the school was 250, the lowest scarcely 100; in 1879 the lowest attendance was 450 and in 1880 the average attendance per day was 550.\textsuperscript{35} The missionaries considered that the children were receiving instruction equal to if not better than in the best German village school.\textsuperscript{36} In the 1880s under the influence of the afrikaansbond, the government decreased its grants-in-aid.\textsuperscript{37} Consequently school fees had to be raised and this decreased the number of children as some parents were not prepared to pay. In 1854 a low school fee had been imposed.\textsuperscript{38} Difficulties first arose in 1879\textsuperscript{39} and in 1908 400 children did not attend school because of this.\textsuperscript{40}

The missionaries established an industrial school for girls in 1866.\textsuperscript{41} The popular Genadendal house aids were trained in this school.\textsuperscript{42}

The Brethren maintained that without the help of the parents and guardians of the children all their schooling would be ineffective. They, therefore, frequently had serious conversations with parents about their duties.\textsuperscript{43} The punishment of the children was in the main left to the parents who were informed when it was necessary.\textsuperscript{44} The Brethren also provided a system of adult education. This developed from the original classes for adults. In 1820 Hallbeck im-

introduced classes on Sundays and Saturdays for the young men and women (respectively) who had left school.\(^{45}\) In 1838, the Sunday school for adults was changed to an evening school twice a week. Those who attended were taught reading, writing, arithmetic and English. Besides, there was a general knowledge class run by Hallbeck. In 1836, Hallbeck brought a small Dutch library with him from Europe. The books were all circulated in the community within a few days.\(^{46}\) By 1838, the adult school had 169 registered pupils.\(^{47}\) The classes for those just out of school were changed to the evening in 1862, after a period when there were no such classes.\(^{48}\) When the new school room was erected in 1880, these classes had again not been held for a time because of lack of room. They were reintroduced as Bible classes on Sundays.\(^{49}\)

A number of people in the settlement were very eager to learn to read. Some few men, at work during the day, learnt to read from their wives and children at night.\(^{50}\) In 1849, one of the brethren writes that very often they found that the Bible was being read in the houses.\(^{51}\) The education of the villagers thus did have some effect. In 1846, when many of the men were on the frontier as soldiers, the villagers received many letters from them.\(^{52}\) In an official inquiry in 1864 of 3190 inhabitants, 699 persons claimed to be able to read and write; a further 698 stated that they were able to read.\(^{53}\)

The Genadendal training school was founded to train native teachers and ministers. The idea was present in the minds of men like Hallbeck long before it was actually put into effect. In 1828, Hallbeck took David Pfeiffer and another boy into his custody for special training.\(^{54}\) The Brethren realized that this private training was insufficient. When the meagreality of a German prince had made the under-

taking financially possible, the project was started.\textsuperscript{55}) On the 12th September, 1838, Eschelal Pfeiffer, as a member of the teaching staff, and the first pupils entered the Training School building.\textsuperscript{56}) When James Backhouse visited Genadendal soon after, there were ten pupils in the institution.\textsuperscript{57}) The subjects that were examined in 1842 were English and Dutch reading and grammar, translation, arithmetic, geometry, geography, history, and singing. A number played hymns on the piano and handed in specimens of writing and drawing. The students assisted in the schools and in this way obtained practice in teaching.\textsuperscript{58}) In 1842 the first teacher was sent out to help at Elia\textsuperscript{59}) and in 1845 the first student to be put in charge of an outpost left for Houtkloof.\textsuperscript{60})

In 1846 the first Bantu or 'Caffres' entered the seminary. The missionaries were satisfied with their progress and their behaviour. In 1848 there were 14 students in the Training School. Besides the subjects mentioned above they received instruction in the playing of the violin and in Bible exegesis. Some of the subjects were taught in English.\textsuperscript{61}) The students were apprenticed to craftsmen in the village and learned shoemaking, tailoring, and carpentry.\textsuperscript{62}) They entered the school when they were twelve years old and remained with the missionaries until they had completed their training without returning home at all. This meant a financial sacrifice to the parents as many boys could earn money when they were 12 years old.\textsuperscript{63}) In 1858 of the 45 who had finished their training, seven had "turned out ill. Such a result, we ascribe to the Lord's mercy alone."\textsuperscript{64}) The missionaries did not expect to have success with all their students.

The Training School was the first of its kind in the Colony. Teachers trained in it were in demand. They were

used by Bishop Gray of the Anglican Church and the Berlin Missionary Society. Some other missionary concerns followed the Moravian example. When the London Missionary Society planned a teacher training college at Hankey it took Genadendal as a model.

The printing press was looked upon as part of the training school. Some of the students were trained in the art of book printing and book binding as an alternative to apprenticeship in a craft. This improvement as well as the introduction of lessons in playing the organ and the trumpet were due to the energy of Brother B. Marx who was in charge of the Training School in the 1860s. The training school was inspected by Dr. Dale in 1863 and he was

"...satisfied with the result of his examination, except as regards their knowledge of arithmetic, for which, indeed, they have but little talent, with the progress of the older pupils, he was much pleased; some of them even puzzled the examiner himself."

By 1868 75 students had passed through the school, of these 37 had entered the school service and 10 had to be dismissed for bad conduct. In 1870 there were 33 in employment, 17 in the schools of the United Brethren and 16 in those of other churches. In spite of the failures the Brethren were convinced of the usefulness of the school.

In 1883 a theological class with a two-year course of study was added, the teachers' course had to be extended because of the requirements of the government.

In 1875 an inspector examined two of the pupils. He said he would have given them both a teachers' certificate had he been authorised to do so. After this it was decided to enter pupils for the government examinations, and in 1877 the first three candidates wrote and passed them.

The Genadendal Printing Press can be grouped under the heading of education from the point of view of provision of

reading matter. In 1854 a small printing press arrived in Genadendal as a present from Holland. Halbeck put it together and used it occasionally.\(^7^4\) There is no sign that the press was used extensively until Brother B. Marx unearthed it in 1859.

We are determined to get the press to work as much as possible; if we can get the people to read more, I am sure much will be gained.\(^7^5\)

In 1860 the Society for the Furtherance of the Gospel in London presented the mission with a new printing press.\(^7^6\) By 1861 300 copies of the monthly paper 'De Bode' and 700 copies of the monthly paper 'De Kindervriend' were printed.\(^7^7\) They were read both in and outside the village.\(^7^8\) A book-binding department under the supervision of A.G. Mättasch was added to the printing office in 1860. Here the books of 'Watchwords' printed in Dutch in the printing office were bound, "some were done to order, in calf, with gilt edges."\(^7^9\)

In 1885 a modern machine arrived and the printing office earned more money as orders from outside were executed. For a considerable period it was the only press in the country that could print music.\(^8^0\)

The Brethren were very desirous of eliminating illiteracy among the inhabitants of Genadendal and worked incessantly at this task. Their main aim, however, was to provide the whole community with a truly Christian education.

The Structure of Society at Lenendale.

The values and social relations of the community living in the village at Lenendale were largely determined by the Christian principles inculcated by the missionaries of the Unites Fratrum. This new set of values was superimposed upon the decaying system of tribal values of the Hottentots. The individuals who moved to the place after the missionaries had arrived in 1792 realised that a profound difference existed between their attitude to life and that of their teachers. They attempted to mould their behaviour accordingly. Within the first few weeks they spontaneously put a stop to their dancing without any remonstrance from the missionaries.\(^1\) They were under the impression that the missionaries would be pleased if they showed what they had learnt from Georg Schmidt. For this reason they used to pray mainly during the night when they always withdrew to a particular spot for their devotions.\(^2\) The nucleus of the community which gathered after 1792, were persons who had been under Schmidt’s care and descendants of such persons.\(^3\) In spite of the strength and novelty of the precepts of the brethren, the values of tribal society, its customs and beliefs were not completely overwhelmed and eradicated.

The importance of Christian principles in determining the values according to which the community lived is seen when one analyses the class stratification within the community and the qualities that afforded social prestige and status. As has been described in Chapter III, the main determinants of classes within the community were the rank the individual held in the church and the official position if any. Lichtenstein’s description of the community in the beginning of the nineteenth century bears this out. The uppermost strata among the communicants was formed by the chapel-servants and later the ‘opinioners’. Below the communicants were the baptised. The lowest class was formed by the ‘new People’ and the candidates for baptism.\(^4\)

There were, however, divisions that cut across church privilege. The qualification of wealth was distinctive and

2) P. Accts. J&IIV: Jul., 1811 - Dec., 1811 - Diary G.
3) ibid., LXIII: Diary G., Aug., 1810 - Jun., 1811; Mchr. 1. 1846: Ber. G., 1843.
As the community became increasingly integrated in the economy of the whole Colony. In the beginning, as Lichtenstein points out, wealth and rank in the church, usually fell together, as the Nineteenth Century progressed this changed. Christian Seitz, for instance, who was excluded for a time, was described by Lady Duff Gordon as a person of wealth and social prestige. Under wealth the community at Genadendal understood the possession of a fine herd of cattle, particularly a full span of oxen and the possession of a well built house.

There is no evidence that race caused any divisions or rivalry. Latrobe states of the 'Caffres',

"They differ in features and habits from the Hottentots, but there, associate with them in perfect unity,"

There were no complaints of differences between the Hottentots and the emancipated slaves.

The social line of division between the sexes was, however, maintained and became perhaps even more important than it had been in tribal society. At burials and church services for instance, the sexes were kept strictly separate. When the chapel-servants met a distinct division was drawn by the inhabitants themselves between the men and the women.

It is surprising that certain distinctions of the tribal system were retained at Genadendal, especially when it is realised that the tribal life of the Hottentots was practically destroyed before the missionaries arrived, and that, unlike the Bantu, there were no strong tribal groups from which the population of Genadendal could be replenished. Nevertheless it is a fact that clan loyalties were still an important factor in the social life of the community. Soon after Latrobe's arrival a deputation of Hottentots approached the Brethren requesting that a chief of the Hesqua clan should be recognised as there was too much work for the chief of the Koopman's tribe. Bonsatz and Latrobe persuaded the

9) C.I. Latrobe, pp. 94-5.
Hottentots that this would make a bad impression on the colonial authorities since Koopman had been installed as captain of the inhabitants of Genadendal. They added that such rivalries were un worthy of a Christian community and that they would have to expel anybody who persisted in this demeanour. The Hottentots listened quietly and promised "to desist from their path onto which they had been led by a designing and crafty Hottentot."13 Later Latrobe found that a Hottentot had been to Cape Town to try and acquire a staff of office but without success. The missionaries threatened him with expulsion if he persisted in his intrigues. He at last admitted that he was in the wrong and promised good behaviour in future.14 Captain Koopman enjoyed respect until his death in 1842.15

The missionaries permitted persons skilled in the extracting of poison to continue their activities. In 1812, for instance, a woman skilled in this art saved a cow which had been bitten by a snake. She also cured a colonist of stinging of a "venomous spider" for which he cancelled her debt to him of 20 lads.16 In 1818 a woman is reported to have died because she had not gone to one of these poison extractors immediately. It is probable that these experts acquired and maintained immunity by regularly swallowing snake poison.17

The Brethren's policy of permitting native medical craft had unforeseen consequences. In 1843 the relations of a woman who had died suddenly could not be persuaded that she had not been bewitched.18 Some of these beliefs may have come from the slaves. In 1848 an East Indian sorcerer entered the village. He persuaded the sick and ailing members of the congregation that they had been influenced by their enemies and prescribed preventative 'medicines'. At first he only demanded a penny for treatment, but soon he made the people pay more. He was expelled, but the Brethren were saddened by the knowledge that communicants had been among his clients.19 In 1850 a former female slave treat

a patient who had been suffering from severe headache and had lost the sight of one eye. She persuaded the woman patient that an enemy of hers had cast a spell over her and placed an object in her head which caused the pain. After some time she covered the patient's head in coldung. When it was removed parts of a watch chain and a stone emerged. Only after the missions had threatened to expel her on the complaint of the woman accused by her, was she prepared to admit her fault. In 1884 the missionaries make an entry in their diary that shows that sorcery was still practiced in the community.

"We are fully aware that the belief in and practice of witchcraft still obtains among our people, though positive proof of it seldom comes to our knowledge. One day in August (1884) a chapel servant brought us two curious little bundles. These were charms, which had been found at the threshold of a house where a woman was ill. The culprit was a person living on the place who has not been to church for years, and has long been under suspicion. She was called before us, and, being convicted of the act, was excluded from the congregation."}

in 1885 a young man from Cismesidental, who was living in Cape Town, had an attack of insanity. His friends removed him from hospital and he was cured by a "Kiferdokker in vollem Zauberkostüm." (a Dagaar doctor in full regalia). The residents often turned back to witchcraft to explain illness.

The belief in witchcraft and the power of its practitioners was the most pernicious and clinging relic of tribal society and the lore of the slave population. The Brethren strangely enough allowed even religious functions to be continued. In March, 1793, the three pioneers were invited to attend the burial of a Hottentot child. It took place toward evening. They found the men assembled. The women were sitting on the ground smoking and observing the procedure from a distance. The corpse, wrapped in a sheepskin, was brought out of the hut. A man, apparently some sort of priest, headed the procession, he was followed by the person carrying the corpse. Behind him came the father and then the rest of the men carrying shovels. The grave was four feet deep and larger than necessary for a grownup person. A vault to receive the corpse had been excavated in one side of it. The grave was first filled with branches and faggots, and then

with earth which was heaped up in a mound on which a Hottentot fig was planted. The mound was later covered with stones to keep off "wolves". The ceremony ended with the slaughter of a goat.

"The graves of Hottentots are very visible for a great number of years, and there are behind our house many mounds of earth covered with stones as monuments of the deceased."23)

Some of these customs were still observed a quarter of a century later as appears from Latrobe's report in 1816. The corpse then was covered in skins but laid on a bier and covered with a white sheet. The service in church and the procession followed Christian practice. At the graveside

"The liturgy at burials is read, during which, two of the bearers, descending into the grave, receive the body from those above, and place it in a recess, made on one side, at the bottom."

This was the traditional Hottentot grave. Ashes and branches were still piled into the grave as high as the top of the recess and earth thrown on these. Latrobe could not obtain any information on the origin of this custom, but as it was done "with decency", the missionaries permitted it.24)

The family was the most important social unit within the community. It was of course monogamous. As we have seen, the family was the basic economic unit within the community, while the father earned the money in the fields and as a tradesman, as a migratory labourer and in the service of the Brethren, the women and younger children tilled the gardens.25) The growing importance of migratory labour, tended to disrupt the family. Towards the end of the Nineteenth Century when the labourers from Venadental had to go farther afield to find work the disruptive effects of the system increased.

"This state of things is most detrimental to the families thus broken up. Those who have one station for the most part, withdraw from Gospel privileges and influences. The men, absent from home for months, or even years, lose their affection for those who should be dearest to them. And whilst they, unmindful of duties to wives and children at home, are in too many instances squandering their earnings in drink, or going yet more sadly astray, the latter are suffering in many ways. Children, missing a father's authority and the training of a well-ordered home, follow their own inclinations in the direction of levity and evil,"

25) CO 102 Answers to Queries, Halifax, 11th Dec., 1819.
The Genadendalsers could not fall back on a tribal reserve in rural areas as is possible for many Bantu to-day.

Shortly after the second British occupation the authorities empowered the missionaries to perform marriage ceremonies. When the couple to be married were baptised, they intimated their intentions to the missionaries. After they had promised each other in marriage in the presence of all the missionaries the bans were read on three consecutive Sundays. They were then married before the assembled congregation. The heathen couples who lived together as married persons in the village presented a difficulty that was only overcome by legislation in 1839 which authorised the missionaries to marry these people as well. There were then well over a hundred such couples. The ritual of marriage was the same except that the actual ceremony, though performed in the church was not gone through before the congregation but only in the presence of the missionaries. Excluded persons were married in the same way. The Brethren deplored the fact that legal divorce was impossible.

"Es ist zu beklagen, dass auch dann, wenn der Mann oder die Frau sich einer Unreue schuldig gemacht hat, hier keine Scheidung ausgesprochen werden kann, wenigstens keine solche, wodurch der- oder diejenige von ihnen, welche unschuldig ist, Freiheit erhält wieder zu heiraten, - so wenig man es auch auf der andern Seite billigen kann, wenn die gerichtliche Scheidung zu leicht zu erhalten ist. Zwar vergebe die Gottestaten einander gleiche Unreue leicht, und wenn der oder die Schuldige um Verzeihung bittet, was eigentlich immer geschieht, so leben sie dann wieder ungestört mit einander. Aber es kommt doch zweifel vor, dass der schuldige Theil in der Verständigung beharrt, z. B. dass die Frau mit einem andern Mann davon geht, sodurch der verlassene Mann, der nicht wieder heirathen dürfen, ebenfalls der Verleugnung, sich auf gleiche Weise zu verheirathen, blos gestellt wird."
The missionaries thought that the Hottentot girls were easily seduced. Some of the most promising girls were seduced by the Dragoons posted at Zoetemilkevallei in 1797.\textsuperscript{31} There is no evidence that preventative measures such as marrying the people young were taken by the missionaries. Hallbeck airs his views on the problem in a letter.

"Though we are far from excusing sin, we cannot but pity the poor females, considering the many obstacles in the way of regular marriages, presented by the customs and mode of life in this colony."\textsuperscript{32}"

If an unmarried girl came in the family way she was publicly ejected from the congregation. She usually stayed with her parents and was later readmitted.\textsuperscript{33} In 1888 the murder of an illegitimate child is mentioned.\textsuperscript{34}

The impression the morals of the Hottentots made on the Brethren was not unfavourable. They reported that, although idle, they were honest in regard to the property of another person. They did not steal unless they were driven by severe hunger. The missionaries experienced examples of the Hottentots returning lost articles to the owner.\textsuperscript{35} They noticed, however, that they were apt to deceive them as to their inner religious feeling. Some had learnt by contact with the colonists to speak religiously and they had become 'expert at dissimulation' inventing the most convincing excuses and falsehoods.\textsuperscript{36} They also accused them of making 'any frivolous excuse' a reason for their 'running up' and down the country.\textsuperscript{37} In 1836, however, Hallbeck says that the population of the Cape Colony, Europeans as well as Hottentots, had a natural propensity for travelling. Often what would be described as 'travelling' in a colonist was branded as 'vagrancy' in a Hottentot. He adds, that the number of strange Hottentots who entered Genadendal had not increased since the repeal of the Vagrancy Laws in 1827! This could easily be checked as strangers had to report to the magistrate the guilty party persists in sin, e.g. that the wife deserts with another man, consequently the deserted husband, who cannot marry again, is also open to the temptation to sin in the same way.

the 'opziensers'. In fact, the colonists roved as much as the Hottentots, but it did not cause any harm. A vagrancy law, the introduction of which Hallbeck had strenuously opposed in 1834 although not in public, was therefore, not only unnecessary but injurious to both the farmers and the Hottentots as labour could not move freely and the Hottentots suffered under the abuses of the system. Hallbeck could not recollect having seen any beggars in the colony except one or two Irishmen.

In the beginning the missionaries found 'nichts mehr zu beklagen, als die Neigung dieses Volkes auf Unthätigkeits...'). In 1836, however, Hallbeck said that in Genadendal the Hottentots were prepared to work if there was prospect of remuneration. He gives examples of cutlers who had worked in the cutlery since 1795 and of servants in the kitchen who had worked there since 1798. The missionaries, however, were of the opinion that the Coloureds were a thriftless people and that they were incapable in many cases, of taking the necessary precautions for the future. The missionaries probably slightly exaggerated this trait in the character of the Hottentot people. Their failing in this respect was partly due to the fact that Genadendal simply could not carry the population that lived in the village. It was true on the other hand that the Coloureds, when they were earning well as for instance on the railways in the 1870ies used their earnings for the purchase of alcoholic drinks to the great detriment of family life. The Brethren themselves were convinced that drink was the most dangerous and pernicious enemy of the community.

"Wir sind überzeugt, dass der Branntwein vornehmlich die Waffe ist, mit welcher die Fürsten der Finsternisse wider den weih Gott streiten,..."

In comparison to drink, dagga smoking, for instance, was only a minor problem. It is only mentioned once in 1849.

43) Ibid., 5. 1846: Ber. G., 1846 (We are convinced that 'brandy' above all is the weapon with which Satan attacks the kingdom of God...)
In 1801 the missionaries complain of inhabitants who brought wine into the village and the resultant intoxication. The worst effects of alcohol appeared when a group of people gathered in one house for the express purpose of drinking. They often chose church festivals for such parties because then many people were at home. The introduction of 'canteens' in Galedon increased the amount of drunkenness among the inhabitants. In November, 1849, however, a missionary writes that only two cases of drunkenness occurred in six months.

The volunteers in 1851, however, spent much of the money advanced to them in a bottle store one and a half hours walk from Genadendal. Drunkenness increased after 1851 because the people had less respect for the constable than they had had for the 'opzieners', and because 'canteens' were opened in Glayan, a neighbouring village.

This weakness cannot be entirely blamed on the Coloureds. White men kept the 'canteens' in the vicinity of Genadendal. On the farms the tot system was in vogue. The farmers gave wine to their labourers as part of their daily wage. At New Year kegs of wine or brandy were given to the labourers on some farms in the 1830ies. Besides, the tot system was abused. Some of the farmers, in one case even a Justice of the Peace, gave their labourers wine instead of wages! The Brethren wholeheartedly condemn the system in the following words:

"...Denn der Genuss des Weines, der der einzige und Fluch ihres (der Farbigen) Familienlebens ist, Ubt noch immer einen unverharrlichen Hieb auf sie aus. Nun sind einige unter weilten Nachbarn so gewissenlos, dass sie nicht nur ganz gegen das Landesgesetz ihnen den Wein in kleinsten Quantitaten verabreichen, sondern sie heimen auch die Charaktereigenschaft unserer Leute in der Weise aus, dass sie ihnen neben dem geringen Lohn, welchen jene teilweise in Naturlichen nehmen Mussen, auch etwas Wein extra verabreichen, indem sie darauf rechnen, dass die...

The terrible conditions on the railway line beyond Beaufort West where many Genadendalers worked would have destroyed the character of better men. The navvies were at the mercy of the speculators who were building the railway line. They unscrupulously exploited them by selling them provisions, especially brandy, always making out that the labourers were in their debt. In 1884 on a pay day brandy found almost everyone intoxicated on one of the stations. Men were injured by broken bottles, others were robbed, and a brawl in which some were killed was simply broken up by riding police. No one attempted to apprehend anyone for murder.55)

In some cases colonists deliberately tried to seduce the Coloureds to drink.56) Latrobe expresses his disgust at the actions of such a man, a farmer of the vicinity.57) Sometimes as in 1885 they sold otherwise unsellable wine to the inhabitants of Berea.58) On other occasions European youths had drinking parties in Genadendal.59) The influx of wine into the village during elections has already been mentioned.60)

The Brethren wisely did not insist on total abstinence, when, however, individuals brought large quantities of

54) Nchr. 3. 1888: Ber. G., Jul. - Dez., 1886. (The taking of wine, the ruin and malediction of their (the Coloureds) family life, still exercises and irresistible temptation over them. Some of our white neighbours are so cruel and unscrupulous, that not only do they hand out wine in small quantities against the law of the country, but they exploit the weakness in the character of our people by giving them, besides their meagre wages which they have to take partly in kind, quantities of wine, surmising that once they have tasted it they will rather take wine instead of the little cash. That their wives and children suffer under this does not worry them in the least. Among these whites are men, honoured and respected, and found worthy of being church elders.)

60) See Chapter V.
spirituous liquor into the village and caused disorders, the Brethren punished the culprit by expulsion and exclusion. The people were allowed to have drink in their houses; but no 'canteen' were allowed in Genadendal and public drinking was prohibited. During Halbeek's period the missionaries supplied wine to their coloured labourers and on festivals sold wine to the inhabitants in reasonable quantities.

The Brethren and the residents petitioned the government against the opening of 'canteen' in the neighbourhood. As a result a license to open a public house between Caledon and Genadendal was refused by the magistrate in 1848. In 1851, however, a petition, signed by 574 Hottentots failed, and a bottle store was opened near Genadendal. A change in the licensing laws in the following year gave the power to grant licenses to the local authorities who decided to confine the granting of liquor licenses to Caledon, because it was served by a magistrate and police. In 1860 this law was altered again giving the Divisional Council and the magistrates power to grant licenses. As a result the petition of the missionaries and 500 residents failed to avert the granting of a license for 'canteen' in Greyton only two miles from Genadendal. The missionaries therefore had to adopt other measures. They uttered admonitions against drink in the religious meetings. One of these was delivered spontaneously by Ezechiel Pfeiffer. The Brethren also printed pamphlets and posters describing the evils of drink and extolling the virtue of temperance. The initial beneficial effect, however, wore off. Soon many, especially excluded persons, fetched wine from Greyton.

In 1884 and 1886 the missionaries again successfully petitioned with as many as 500 signatures, against the granting of liquor licenses near Genadendal.

Drink was one of the major causes of crime in the

In general, however, the community had a good criminal record. A Commission in 1823 found that in four years the provincial court of Swellendam had dealt with only seven cases in which Genadendalers had been involved. With one exception these had been cases of stock theft and stealing. Cases of murder and assault probably often were perpetrated when the inhabitants had left the settlement.

Most disputes within the settlement were about irrigation. The missionaries were always grateful when rain or other circumstances removed the cause for them. Other disputes arose about the damage done by stock in the gardens.

On the whole the teachings of the Brethren had a beneficial effect on the morals and conduct of the inhabitants of the institution. Besides this there was the sanction of the opinion of a fairly small and compact community. This deterrent decreased in importance as the village grew larger and the people had less contact with one another.

The Achievements of the Unitas Fratrum at Genadendal.

With the inauguration of the Georg Schmidt Memorial Church we come to the end of the period under discussion. This last effort by the congregation for which they provided most of the money and practically all the labour marks a turning point in the history of the community. The ideal of independence is far closer. In 1922 the first Church Conference at Elim acknowledged the independence of the eastern province in South Africa. The decisions of the new branch of the Church of the Unitas Fratrum are, however, still subject to the assent of the Mission Directory.¹)

The civic community at Genadendal also moved towards independence. This was eventually reached with the application of the Mission Land Act in 1926. The rules and regulations proved too weak to maintain order in the village. Attempts by the Superintendent P.O. Hennig (1894-1909) to improve them were ineffective. The missionaries were in favour of introducing the Mission Land Act at the earliest possible date and tried to persuade the inhabitants to their view. This would have relieved them of the arduous task of looking after the secular problems of the community, but the majority opposed such a move. 1914 brought further opposition to the introduction of the Act and the inhabitants emphatically stated that they would reject its application. The 1914-18 war prevented further efforts at persuasion by the missionaries.

Soon after the war, however, matters came to a head. Four inhabitants of Genadendal took the Trustees of the Moravian Missionary Society to court demanding a declaration of the rights of the inhabitants. They demanded that an interdict be proclaimed restraining the defendant from proceeding with any transactions, that the system of native relief in the village be revised and that costs be awarded to the plaintiffs. The case was decided in favour of the trustees and they were awarded costs.

This again showed up the difficult position in which the missionaries and the 'Opziener Konferenca' were. Then, therefore, the magistrate at Wadeon enquired about the best way out. the Superintendent of the 'Opziener Konferenca', Rev. L.K. Schmidt replied:

¹) L.K. Schmidt, Die Broderkerk, p. 11-18.
"The only way out of the most dangerous position ... is, to accept the new Act, the Mission Land Act, which will under a new principle declare, who is a resident, and which Act will have the power to protect the rights of the lawful residents of Genadendal."

The then Minister of Native Affairs, after a visit to Genadendal, strongly advised the community to accept the Act.

On the 10th, June, 1926 the "Opsiener Konferensie" was held with Rev. L.J. Schmidt in the chair. Henceforth the new head van Biewer, which is still functioning in Genadendal took over responsibility for the secular affairs of the community.

The main criticism of the Moravian mission station in general and Genadendal in particular was that they did not allow their charges enough freedom to learn to stand on their own feet. This charge was raised in the 1850s by the colonists. One colonist with particular reference to Genadendal, maintained that he preferred by far a coloured labourer who had never seen a mission station to a person who had lived in one. They also claimed that there were only two independent traders at Genadendal and hardly any tradesmen.

This is in fact the criticism levied against the Moravian stations in general. The system of 'tutelage' practised in them has been compared to the paternalistic policy of the Jesuits in Southern America two to three centuries earlier.

As we have seen there was 'tutelage' at Genadendal, if by this term is meant the policy of keeping temptations away and of 'coercing' the resident to work by rewards and punishments. After 1816, however, the 'Opsiener' must have exercised some influence on the decisions of the missionaries.

They were entitled to advise the Brethren on the question of the reversion of land to the institution when it was not properly tilled by its tenants. They were also required to advise the missionaries on questions of expulsion, admission and readmission. Their advice sometimes went against the wishes of the Brethren but was nevertheless followed.

The conclusion is that the 'tutelage' was imposed with the purpose of preparing the Coloured community for self-govern-

ment. The missionaries themselves would gladly have been rid of this responsibility. 7) We have also seen in Chapter VII that the missionaries encouraged independent tradesmen in the village. Trading was not prohibited, especially if carried out by Coloured residents. 8) There were definite reasons for the maintenance of the system throughout the century under discussion. The first was that Genadendal was economically in an unsound position and an opening up of Genadendal to European competition would have caused the dispersal of the Coloured inhabitants because they owned so little land. Nor did they have the economic resources to meet 'white' competition. 9) Apart from this the missionaries were of the opinion that the Coloureds did not possess sufficient experience to look after their own economic interests as was set forth in Chapter II. While the missionaries were fighting to maintain a compact congregation which was necessary for the progress of their missionary work, they also fought for the economic security of the population of Genadendal. They realised far more clearly than the government and especially the representative and responsible governments of the Cape after 1853, that the Coloureds were in a difficult intermediate position and that they needed legal protection from virile and sometimes unscrupulous competition of 'whites'. These were the reasons why the missionaries clung so tenaciously to their 'grants', 10) the majority of the Coloured inhabitants of the institution appreciated what was being done for them by the missionaries:

"Upon visiting the Doravian mission, we found the Hottentots duly impressed with a sense of the benefit which they had derived from the pious instructions of the brethren, and with strong feelings of respect for their characters; nor did we find that those impressions had been impaired by the example of deference which the Moravian missionaries have uniformly shown to the wishes and measures of the Government." 11)

In spite of the fact that the colonists bracketed the Brethren and the English together in 1797, 12) the Moravian

missionaries were not attacked as virulently by them as those of the London Missionary Society. The probable reason is that the Moravians, although they held views similar to those of the missionaries of the L.M.S., did not publicise their views. With regard to mission method there were, probably more similarities between the work of the Moravian Brethren and that of the L.M.S. than dissimilarities. The basis of the stations was the same, that is the realisation that missionary work was impossible without the gathering of large communities. The differences are differences in detail such as the fact that there were always at least three or four missionaries on the stations of the United Brethren, whereas there were very seldom more than one or two on the L.M.S. stations. Some L.M.S. stations even used a system of reward or punishment for industry as described for Genadendal.

In comparison with such stations as Lovedale of the Glasgow Missionary Society, Genadendal shows many differences. Lovedale was founded in a populous area where the establishment of a village community was unnecessary. The missionaries at Lovedale were thus not burdened with the task of taking responsibility for and civilising such a village. From the beginning Lovedale was far more an educational centre than an emerging Christian population centre.

Although Genadendal to-day compares very unfavourably with an institution such as Lovedale, the missionaries of the United Brethren can claim to have done both great Christianising and great civilising work at Genadendal. In their Christianisation of the Hottentots and the slaves they were successful. To-day Genadendal is a congregation that is practically independent and served by a minister from the ranks of the Coloured people. Their civilising work appears not to have been quite so successful because of circumstances beyond their control. The economic self-sufficiency of the community at Genadendal as the Brethren envisaged it was incompatible with the influx of goods from industrialised Europe and with the process of industrialisation within the Union. To-day Genadendal, although served by twelve retailers, still gives the impression of being a poor community which depends for its livelihood on the labour it can sell outside the settlement. The function of Genadendal to-day is to

provide the Coloureds with a home and some of them with land. What is perhaps more significant, it also provides many coloured children with a fairly good education. The Genadendal school, run entirely by Coloureds to-day, has the reputation of being one of the best Coloured schools in the country.

Hoofdstuk 1.

Uitvoer Christelijke Leer, Kerkgemeenschap, en Algemeen, Zedelijke en Maatschappelijke Plichten.

2. Zij beschouwen het als een heiligen plicht, naastig en met gestaan eerbied de verschillende geslachten binnen te wonen, welke ons achter verlaan werden tot onderwijs en opvoeding, dat deze noodzakelijker is, dan een groot aantal onder ons niet lang geleden onkundige heelden waren, die groote behoeften aan onderwijs hebben.

3. Als een christen-gemeente achten wij het onze plicht om alle vijf aantewenden, dat de Heilige Sacramenten, namelijk, de Heilige Doop en het Heilig Avondmaal, onder ons beduidend worden volgens de instelling van Christus en met gestaan eerbied door de leden der gemeente worden gevieren.

4. Wij moeten gerekend zijn, om een ieder te antwoorden, die ons de reden vraagt van de hoop, welke in ons in (1 Petr. iii, 15), waar wij verlangen nutteloze en twistige samensprekingen (Rom. xiv, 1) met menschen van andere geloofsbeelden te vermijden.

5. Wij beschouwen al diegenen, die kerkgenoten zijn tot een levendige hoop door den Heiligen Geest, ofschoon wij van ons in geringe punten mogen verschillen, als bordsers en mutes in Christus, met welke wij verlangen in vrede en christelijke gemeenschap te verbeteren. Zij zijn, echter, niet meer aan elkaar als de predikant schijnt. wij als een bijzondere gunst aan ons verleend beschouwen, en van hier kunnen wij niemand als een onder wi jzer onder ons beschouwen, die niet benoemd in door de directie van gemelde kerk.

6. Zij verfoeien al diegenen, die kerkgenoten zijn tot een levendige hoop door den Heiligen Geest, ofschoon wij van ons in geringe punten mogen verschillen, als bordsers en mutes in Christus, met welke wij verlangen in vrede en christelijke gemeenschap te verbeteren. Zij zijn, echter, niet meer dan de predikant schijnt. wij als een bijzondere gunst aan ons verleend beschouwen, en van hier kunnen wij niemand als een onder wi jzer onder ons beschouwen, die niet benoemd in door de directie van gemelde kerk.

7. Wij verfoeien al diegenen, die kerkgenoten zijn tot een levendige hoop door den Heiligen Geest, ofschoon wij van ons in geringe punten mogen verschillen, als bordsers en mutes in Christus, met welke wij verlangen in vrede en christelijke gemeenschap te verbeteren. Zij zijn, echter, niet meer dan de predikant schijnt. wij als een bijzondere gunst aan ons verleend beschouwen, en van hier kunnen wij niemand als een onder wi jzer onder ons beschouwen, die niet benoemd in door de directie van gemelde kerk.

8. Zij verfoeien al diegenen, die kerkgenoten zijn tot een levendige hoop door den Heiligen Geest, ofschoon wij van ons in geringe punten mogen verschillen, als bordsers en mutes in Christus, met welke wij verlangen in vrede en christelijke gemeenschap te verbeteren. Zij zijn, echter, niet meer dan de predikant schijnt. wij als een bijzondere gunst aan ons verleend beschouwen, en van hier kunnen wij niemand als een onder wi jzer onder ons beschouwen, die niet benoemd in door de directie van gemelde kerk.

9. Wij verfoeien al diegenen, die kerkgenoten zijn tot een levendige hoop door den Heiligen Geest, ofschoon wij van ons in geringe punten mogen verschillen, als bordsers en mutes in Christus, met welke wij verlangen in vrede en christelijke gemeenschap te verbeteren. Zij zijn, echter, niet meer dan de predikant schijnt. wij als een bijzondere gunst aan ons verleend beschouwen, en van hier kunnen wij niemand als een onder wi jzer onder ons beschouwen, die niet benoemd in door de directie van gemelde kerk.

10. Wij verfoeien al diegenen, die kerkgenoten zijn tot een levendige hoop door den Heiligen Geest, ofschoon wij van ons in geringe punten mogen verschillen, als bordsers en mutes in Christus, met welke wij verlangen in vrede en christelijke gemeenschap te verbeteren. Zij zijn, echter, niet meer dan de predikant schijnt. wij als een bijzondere gunst aan ons verleend beschouwen, en van hier kunnen wij niemand als een onder wi jzer onder ons beschouwen, die niet benoemd in door de directie van gemelde kerk.

1) Taken from a copy of the 'Gemengte Ordedingen' printed at Bussandret, 1795. The 1827 rules and regulations from CO 61 containing an English copy sent by Leuthez to the Civil Commissioner in 1851.
zijn wij allen verplicht ons als getrouwe onderdelen te gedragen, en stiptelijk gehoorzaam te zijn aan de wetten van het land, waar ons lot geoorde is.

11. Onze regulaties kunnen dus de wetten van de kolonie niet hinderen of deselve vervangen. denmeer onder ons de crimineele wetten overtroffen worden, (hetgeen God verboede) beschouwen wij het onzen plicht om dit aan de bevoegde autoriteiten bekend te zaken.

12. Het is onze plicht om alle menschen lief te hebben, zelfs onze vijanden; wij zullen dus zorg dragen om niemand te beledigen; maar integendeel, trachten om het geestelijk en tijdelijk welzijn onzer medemenschen te bevorderen.

13. Wij moeten dus allen vermijden, vooral in woorden als daden, waardoor wij anderen aanstoot zouden kunnen geven, of hen van den weg van plicht afbreken.

14. Wij beschouwen niet alleen woord, diefat, mensheid, be­ drog en andere zonden, welke volgens de wetten van het land straffbaar zijn, als grave overtredingen, waar wij rekening, inzicht, toets, kwadskwetterij, tucht, twisten, achterklep, leugen, enz., als werken der duisternis, van welke wij met nadruk moeten trachten verloot te worden.

15. Onze onderhandelingen met onze medemenschen moeten geken­merkt worden door de stilste oplettendheid op waarheid en eerlijkheid; wie ook zijn naasten bedriegt of onbehoorlijk voordeel van hen trekt, beoordeelt zijne voorrechten als lid van onze kerk.

16. Wij verlangen, zoo veel in ons is, in vrede te leven met alle menschen, en dus zullen wij, met genoegen, elke gelee­genheid te best nemen, om onzen naaste te dienen, zoo ver dit in onze vermogen is, en trachten het voorbeeld van Jesus te volgen, om verdiel te zijn goot voor iemand te vergiften.

17. Van elken bewoner deszelver plaats wordt verwacht, dat hij vriendelijk en beleefd zij jegens alle menschen, en alle brutaliteit en alle gemoeheid, zowel in woorden als gedachten, vermijdt; dit is meer bijzonder de plicht van jonge menschen jegens hen, die meer in jaren gevorderd zijn.

18. Wij achten het onzen plicht, om oplettend te zijn op al hetgeen dienstig is voor gemengdheid, bijvoorbeeld, zindelijkheid, gepaste kleeding, geschikte gezondheids­re¸ning, enz.

20. Aan den anderen kant moeten wij zorg dragen, dat wij ons niet in de zaken deze leven en op zulke wijze inslikken, dat wij de meer gewrichtige belangen der eeuwigheid verwa­ loosend.

22. Wij zullen niet vergeten, dat wij geroepen zijn om God te verheerlijken in lichaam en in geest, die Gods, en dat wij dus verplicht zijn om te ontwikkelen alle zonden, welke lichaam of ziel verweten en verlagen, zoó als, hoever, ruwe, zonde, vreemdachtig, drankensucht, het zoeken van dach, enz.

23. Wij beschouwen het heilig huwelijk als eene instelling van goddelijken oorsprong en van levendig aanbeveling voor de instandhouding van gemakelijke orde, wij zijn dus verplicht, in dit opzicht, te handelen volgens Gods woord en de daargeste­de orders van de Christelijke kerk.

24. (Zoo als hergegeven in 1877.) Leden van het instituut, met zij ge door of andersins, die men zaa waar, dan ver­ loofd te zijn geworden in de tegenwoordigheid van hunn wu­ dero en de mededelingen, moeten hunne huwelijksten laten afkonden en in de kerk getrouwd worden. (As in 1827: Baptised members of our congregation after betrothal before parents and missionaries must appear before the matrimonial Court before they can be married in church.)
25. (Zoals hernoemd in 1857) De zaadzige, die vroer met elkander hebben geleefd, beloven, wanneer zij tot het instituut worden toegelaten, om zich in hunn gehouden staande te gedragen, volgens de beginsels van het christendom, en behoren aanmoed te doen om bij de eerste gelegenheid wettiglijk getrouwd te worden; ingeval zij hunne beloft ev breken, worden zij op dezelfde wijze behandeld als of zij wettiglijk waren getrouwd geweest. (As in 1827: Soo people as have previously exhibited, promise on entering the institution to adhere to christian marriage principles and in case of breach of promise are treated in the same manner as if they had been regularly married.)

26. (Wegegalaten in 1857.) (As in 1827: Unbaptized who want to marry and cannot appear before a matrimonial court or be married in church are married privately before Missionaries with only their next of kin present. The union is afterwards made known to the congregation. They must adhere to rules of the Christian Church, as if married before the congregation.)

27. Wanneer een lid van het instituut een persoon trouwt, daartoe niet behorende, op een willekeurige en wettige wijze, wordt hij daardoor niet uitgezonderd van kerkgemeenschap met ons, maar het moet, in elk zoodanig geval overgelaten worden aan hen, die het opzicht hebben over het instituut, om te beantwoorden, of zijn wederhalf kon toegelaten worden als een lid van de plaats.

28. Als ook op een onregelmatige wijze tot samen verkeert, of schuldig is aan overpel, kan gewezen worden een lid van het instituut blijven, en afwijkingen van de regels van de ducht en kuisheid zijn onderworpen aan kerkelijke tucht, bestaande naar gelang van omstandigheden, in private of openbare uitstelling van de gemeenschap en de voorrechten van gedoopte leden.

29. Het is een zeer belangrijke plicht van hen, die God met kinderen gesegeend heeft, of die de kinderen van anderen hebben aangenomen, om hen op te voeden in de leer en vermaning dat kinderen, heetegen in zik bevat dat zij vroegtijdig bekend gemaakt worden met hunne Schrepper en Verlosser, dat men hen de school en kerk laat bijwonen; dat zij gewend worden gehoorzaamheid en vlijig, en dat de ouders hen niet alleen geen aantoon geven, maar zoo veel mogelijk waken over hen, opdat zij niet door anderen verleid worden, enz.

30. (Zoo als herzien in 1857.) Men verwacht van de ouders en vooral, dat zij hunne kinderen naar hunn behoeften zenden op den onderdom van vier jaren, opdat zij in de gelegenheid mogten zijn om onderwezen te worden, alvorens zij geroepen worden om hun brood met dagelijkse arbeid te verdienen.

Hoofdstuk II.

Omstreeks uitwendige Orde en wagentijdenheid van het Instituut.

1. Met het doel om te waken tegen wanorde en geschillen, is het noodig dat elk huisgezin afzonderlijke woningen hebbende, en dat al ongetrouwde personen eene vaste woning hebben, wien zij niet met en verscheiden zonder voorlof van hen, die handen zijn om het toezicht te houden over het instituut.

2. Het bouwen van stieren huizen worden sterk aanbevolen, maar van welken aard de woning en andere erven ook wegn zijn, zal de bewoner verplicht zijn dezelve zindelijk, schoon en in goede reparatie te houden, zoowel van binnen als van buiten.

3. De inspectie over het bouwen van huizen is opgedragen aan een der zendelingen, wiens werk de ingezetteen verplicht zijn te gehoorzamen, zowel wanneer zij nieuwe woningen bouwen of oude vergrooten.

4. (Zoo als herzien in 1857) Opsichters worden ook handzaam om vulingrand en ploegland uit te deelen, en het is tevens
hum plichten te waken, dat van het land aldaar uitgedeel, behoorlijk begrijsk werde gezaakt. Een ieder dus, die nalatig is om zijn grond te bebouwen, moet aan zijn plicht zeghen, en wanneer hij in zijn nalatigheid voortgaat, moet hij verwachten, dat het gebruik van het land aan een ander zal gegeven worden, daar hetzelve niet alleen onnuttig voor hem is, maar ook nadelig voor de angrenzende tuinen, worden hunne gesedden dikwijls door zuinen en anders schadelijke dieren verzuild, die zich op de onbebouwde plaatsen schudden. (As in 1827: Overseers are (formerly a missionary) appointed to distribute garden ground and plough-land, and to see that this land is properly made use of. Neglected land may be given to someone else to cultivate as it may not harm the owner but also his neighbours as uncultivated land harbours mice, etc.)

5. Alle geschillen omtrent vruchtboomen, heiningen, de grenzen van tuinen, bevochtiging en andere schade- en andere zielen vereisj, die zich op de onbebouwde plaatsen schudden (As in 1827: All disputes about fruit trees, vineyards, boundaries of gardens, irrigation and other injuries, that may occur on the uncultivated parts, must be decided in a similar way, as it may not harm the owner but also his neighbours as uncultivated land harbours mice, etc.)

6. Niemand mag bruchtbomen in een ander tuin bezitten, waar door zoo lichtelijk geschilchen ontstaan. Daarom is in de gewoonte om vruchtboomen aan kinderen en aanverwanten te geven, en kinderen daarmede eenigentijds, en van daarmede eenig strevend manier om dezelve afdeelen, is, dat de bezitter van den tuin de boomen moet koopen, of dezelve moeten weggenomen worden.

7. Vruchtboomen moeten ten minste zes voet van de grenslijn van de tuin geplaat worden: waar deze regel verwaarloos wordt en dus geschillen ontstaan, zal gevorderd worden of de takken afgeleggen, welke over den naburigen tuin hangen, of, waar dit onmogelijk is den boom te verplaatsen.

8. (Zoo als hernien in 1827). Een ideer heeft de vrijheid om zijn huis of het bezitrecht van zijn tuin aan eenig ingezeten van de plaats te verkopen, waarvan echter behoorlijke kennis moet gegeven worden aan hem, die het opzicht over het instituut heeft, maar het land kan niet worden verkocht, omdat het ezelche bezeten wordt als individueel eigendom, onder de reglementen van het instituut. (As in 1827: Everyone is at liberty to sell his house and opsal and his right of occupation of his garden to any other inhabitant of the place of which, however, due notice must be given to those who superintend the institution, but the land cannot be sold because it is only occupied as individual property under the regulations of the Institution. Marginal Note: The price paid for improvements, inheritance were not interfered with by the missionaries, land gardens, arable land etc. was given gratis.)

9. (Zoo als hernien in 1827). Niemand kan zijn huis of tuin of ander gedeelte daarvan alhier verkoozen, of geven, of verkoozen, of overgeven aan maacht, die niet toegelaten zijn als inschuur van de plaats. (As in 1827: No one can sell, heeueath or let an opsal to a person not a member of the institution.)

10. Wanneer een bewoner de plaats verlaat, zonder dat hij, met toestemming van den inspecteur van tuinen, zijn land en tuin aan de zorg van een ander heeft opgedragen, en voor een langen tijd afwezig blijft, zonder konnie daarvan te geven, kan het land en de tuin aldaar moest gelegen, na twee jaren tot gebruik aan een ander gegeven worden.

11. Van eene, zoo veel mogelijk, te belatten, dat een en schade ligt op zijn eigendom, zijn de volgende voorzorgen noodzakelijk:

a. Dat de tuinen goed onbehand werden.

b. Dat een genoegzaam getal opzigers zorg dragen voor het gezakde op het land.

c. (Gegelaten in 1827) (As in 1827: That one or more herenmen be appointed to look after the cattle.)

d. Dat vee en paarden goed versierd werden gedurende de nacht.

e. Dat geen verkeer op de plaats las loopen.
12. Het wordt verbood om paarden en vee aan de heiligenplaatsen te binden, waardoor zij beschadigd worden, en een groot aantal tuinen dus worden verwoest voor het indringen van vee.

13. Zij, die koren gezaaid hebben, moeten op hunne beurt de wacht houden op het land, en wanneer zij niet in geval kunnen tegenwoordig zijn, moeten zij plaatsen vangers verschaffen.

14. (Wegelegaten in 1857.) (As in 1827: Possessors of cattle must contribute in equal proportions to maintenance of a herdman.)

15. (Zoals verschen in 1857) Een of meer priva te schutplaatsen zijn daargesteld in het insti tuut voor het vee van inwoners, op de tuinen of korenvelden van andere inwoners overtre tende; de kosten worden betaald door eenen bijeenkomst van opzichters, maar in geen geval de kosten te bovengeraamd, welke betaald worden in publieke schutplaatsen van het dist rikt. (As in 1827. If damage is done in spite of these precautions, the sufferer can request two overseers to value the loss and who has caused the loss remunerates the sufferer. If he considers the valuation too high he can appeal to the master of the whole body of overseers.)

16. De Opzichters krijgen geen beloning voor hunne moeite, wanneer die zich bepaalt tot de tuinen of de plaatsen; wanneer zij moeten gaan naar de korenvelden, waardoor zij ten minste een halve dag verliezen, moet vier en een halve penny betaald worden aan elken opzichter, door hen, die zijne tegemoetkoming verzuikt. Hetgeen, wanneer zijne klacht gevraagd is, worden betaald moet worden door hen, die de schade veroorzaakt heeft.

17. Wanneer schade gedaan wordt aan hetgeen de maatschappij in het algemeen toebehoort, bij voorbeeld, aan plantagen, heiligen of begraafplaatsen, enz., wordt de waarde van de schade in de armen kast gestort.

18. Tert voorkoming van schade, wordt een ieder gevorderd, om behoedzaam te zijn met vee, zoowel op planten als op de velden. Niemand mag de velden branden, mits zulks niet ongeoorloofd is, noch in de nabijheid van plantagen buiten wenen van hen, die er het opzicht over hebben.

19. Niemand wordt belet om zijne klachten te brengen voor een beginselstraf; maar, wanneer ook geschillen ontstaan tussen de inwoners van de plaats, is het hun plicht ter eerste instantie, hun zaak voor de opzichters of zendingen te brengen, en te trachten hunne geschillen door hunne bemiddeling af te wenden. Wie ook dit nalaat, kan niet beschouwd worden een waardig lid van onze gemeente te zijn.

21. In de avond-bijeenkomsten in de kerk, gaat een ieder naar zijn woning terug, en niemand wordt toegelaten in het etablissement rond om te wandel, tenzij gedrongen door noodwendoigheid, bij voorbeeld: ziekte, plicht, of dergelijke.

22. Om tegen ongewenste heksen of heksen stilpeil te volgen de regels van zedelijkheid, en dat onze jeugd, in het bijzonder, zoowel mogelijk onder toezicht sta.

23. Onnodige bijeenkomsten van jonge lieden, vooral in den avond, kunnen ons geen nut gevoegd worden; en alle onbenodigde schrijven, verslagen en uitgekregenen, waardoor de onbeëindigde dichten worden opgewekt, moeten opbouden.
24. Ouders en voogden met ten zinnen toelaan dat de jonge menschen onder hunne zorg overnachten in de huizen van andere familien zonder hunne toestemming, en wie ook zulke jonge menschen in zijn huis ontvangt, is verantwoordelijk voor het bruikte, dat daaruit gebeuren zulde.

25. (Zie al terzake in 1857.) Niemand mag wijn en sterke dranken in het etablissement brengen, behalve eene matige hoeveelheid voor egen onmiddellijk gebruik, of eene licentie bekomen ter verkoop van wijn en sterkedranken. Die zelve regelen overbrengt, is verantwoordelijk voor de onlusten daar­door veroorzaakt; en eene die hij in dat gebruik volhoudt, moet hij beschouwd en behandeld worden als een verleider en diensteloos uitgenomen worden. (As in 1827: 'tens' ranc: zoon) en crop sent to Civil Commissioner: the barmagers have for a long time no longer supplied small quantities of wine on the spot.)

26. Al de inwoners zijn verplicht om een gelijkdeel te nemen in het repareren van wegen en waterloop, het in order houden van de begraafplaats, het verzichten van de kerk; aan requisitien van het Government en andere plichten van een gelijken aard.

27. (Bijgevoegd in 1857.) Ouders, die kinderen hebben, gewoonlijk om naar school te gaan, behoren hen naar de school te zenden, en de school omgeven te beschermen.

28. (Ziet al terzake in 1857.) Ouders, die kinderen hebben, gewoonlijk om naar school te gaan, behoren hen naar de school te zenden, en de school omgeven te beschermen.

29. (Zie ook als terzake in 1857.) Ouders, die kinderen hebben, hebben, toen zij hen zeggen, hunne zorg overnachten. (As in 1827: 'tens' ranc: een) en crop sent to Civil Commissioner: the barmagers have for a long time no longer supplied small quantities of wine on the spot.)

30. Van een individu aanspraak doet om tot het instituut te mogen toegaan, zullen zij negeerd worden, aangezien deze een schade kan voorzien, en zij dan negeerd wordt, aangezien zij voor de onlusten van het instituut, en hij behoort, op eene plechtige wijze, zich te onderwerpen aan de aangestelde overweging van al de leden van het instituut.

31. (Zie al terzake in 1857.) Op dezelfde wijze zullen wij geduld uitoefenen jegens hen, die hier opgevoed zijn, zoowel zij niet de reglementen van het instituut trotseeren, in welk geval maatregelen moeten genomen worden om hen te laten verhuizen of af te stappen. (As in 1827: 'tens' ranc: een) and crop sent to Civil Commissioner: the barmagers have for a long time no longer supplied small quantities of wine on the spot.)
Hoofdstuk III.
Over het toezicht van het Instituut.

1. De reglementen van het instituut zijn niet wetten door de zendelingen voorzien, maar een broederselijke overeenkomst tussen de inwoner der plaats, in de behoorlijke betrekking waarvan een ieder even veel belang heeft. Daarom verwacht een van allen inwoners, dat hij niet alleen zich die overeenkomstig gedraagt, maar ook, dat hij zijne beste pogingen zal aanwenden, om enige inhoud daarop door andere te beletten.

2. (350 als herzielen in 1857.) Maar door het eenvoudig is, om in enige samenspraak noch te bewaren, elkaar gezond op reglementen vrijwillig aangenomen, tenzij bijzondere personen belast worden om te waken voor de naleving van zulke reglementen, zoo hebben de leden van dit instituut het oprechte daarvan opgedragen aan de zendelingen, samentien kerkelijke aantekenen en wijfijn-teunzig opzieners, die zij gewillig zijn te sere en te gehoorzamen. (As in 1827: The members of the institution have entrusted superintendence thereof to the Missionaries, 14 Cleric Servants and 18 Overseers, whom they are willing to honor and obey.)

3. Deze superintendenten van het instituut zijn niet geschikt om wetten aan de overigen voor te schrijven, of zich in te laten met zulke zaken als tot het civiele gouvernement van de kolonie behooren, bijvoorbeeld, het hebben van eenen het opleggen van straffen, enz.

4. Hunne plichten zijn als volgt:
   a. om de kerkelijke tuut te bewaren.
   b. om te trachten door elkste aankunnig vanwege en overtreedingen tegen de wetten en de gevestigde reglementen van het instituut te beletten.
   c. om geschillen te verrezen tussen de bewoners van het instituut op eenen minzame wijze.
   d. om verlof van verblijf te geven aan nieuwe aankunnigers, en te onthaal, die hun voorrecht om achter te verblijven van verboord hebben.

5. Het bene van de kerkelijke tuut wordt opgedragen aan de zendenliggende alleen. Deselve bestaat in bestellingen, privaat of voor de vergaderde zendenliggende, in private of openbare uitsluiting (naar het publieke aanzoek is gegeven of niet) van 'e Heeren Avondmaal, van alle kerkelijke voorrechten van gedoopte leden.

6. Alvorens iemand wordt uitgesloten heeft hij het recht om gehoord te worden in de tegenwoordigheid van al de zendenliggende.

7. Het uitgesloten kan weder worden aangenomen, wanneer hij bereid betoon over zijne afwalingen, en er reten bestaat om te hopen op eene verandering van zijne gedrag.

8. De gevallen van heersende afwalingen en onverbeterlijkheid, worden ook de uiterlijke zeedaden van het instituut hem ontzien, en als een laatste hulpmiddel, wordt hij uit het instituut gezet.

9. Door de handhaving van orde onder ons hoofdzekelijk daarvan afhangt, dat wij in staat zijn kwant te beluten waartoe een nauwgesnet oplettenheid op het gedrag van individuen noodzakelijk is, dan de zendenliggende alleen kunnen uitteffen, is een aantal opzieners, insluitende ook de kerkelijke bestemming, om weder de zendenliggende ten laste een maal in de naam vergaderen, om in het vertrouwen te spreken over de belangen van het instituut, de gebeurtenissen te wijzen en plaatselijke schikkingen en verbeteringen voorstellen, enz.

10. De plicht om geschillen te verrezen berust eigenlijk bij de opzieners, maar daar zij niet bij elke nietige gelegenheid kunnen vergaderen, wordt de loopende beslissing van den dag door den ersten zending afgedaan, of, indien...
noodig, door de vergaderde amendementen, die in deze betrekking beschouwd moeten worden als de commissarissen van de opzieneren, en in de volgende bijeenkomst van de opzieneren moet hij elke gebeurtenis van belang rapporteren; ingewikkelde zaken worden niet beslist, alvorens de volle vergadering van opzieneren is geraadpleegd.

11. Zowel iemand tot het instituut wordt toegelaten of daarin omgevaren, wordt dit aan hem medegedeeld in het bijzijn van de commissarissen van de opziener.

12. Elke gebeurtenis van aangenaam rapporteeren. Ingeknoopte zaken worden niet beslist, alvorens de volle vergadering van de opzieners is beëindigd.

13. De kerkelijke bedienden worden door de zendelingen benoemd, de andere opzieneren worden gekozen door de avondgangers van de gemeente, die huizen en tuinen op de plaats bezitten. Uit drie die het grootste getal stemmen hebben, hebben de zendelingen en opzieneren het recht de te kiezen in de behoeft van stemming.

14. Van elke avondganger van de gemeente, die een bezaarde huis en een bebouwde tuin heeft, is verkiezend tot de rechter van opzieners.

15. Elke kerkelijke beambte of opzieners, die zich schuldig maakt aan zulke ongereldheden, dat hij openlijk moet uitgesloten worden, tevens ontzeggen hij zijn bevoegdheid, maar hij kan bij een volgende gelegenheid herkozen worden, indien hij zijn gedrag verbetert en nadat hij zijn toegelaten geworden tot zijne voorrechten als een lid van de kerk.

16. De bovenstaande regulatien werden in de Hollandsche taal voorgelezen in een algemeene bijeenkomst van alle mannelijke volwassenen, die huizen en tuinen in Genadendal bezitten, op den vijfden Maart, 1821, en werden openbaar aangenomen. En aven amendementen, die tegenwoordig waren, werden verzoekt dezelfde in den naam en ten behoeve van de bijeenkomst te ondertekenen, en dezelfde werden daarna door ons ondertekend.

Goedgekeurd.

*Uit van Zijne Majeit den Luit. Gouverneur, (Get.) Richard Plasket.*

Secretaris van het Gouvernement.

"Buiten alles dat gemerkt is als 'herziene in 1857'."

Hoofdstuk IV.

Nadere Regulatien bijgevoegd in 1857.

1. De zendelingen en opzieneren zullen vanwege gewoond, aan de civielen commissarissen van de opzieners, lijsten opmaken en overzenden van inwoners te Genadendal, en van de bevolking.

2. Geen inwoner te Genadendal, die niet een huis en bebouwde tuin van het jaarlijkse wooner van 15 bezit, zal het recht hebben te stemmen over ooit vragengetal betrekkelijk de tijdelijke aangelegenheden van het instituut. De stemgerechtigden zullen op de lijsten gewaard worden.

3. Geen inwoner te Genadendal zal zijn recht als inwoner verliezen, uit oorzaak van de afwezigheid van het instituut, zoo lang hij niet onbevoegd en vlijtig gedraagt, mits dat niet daartegen bekend is, en nits ook dat de een of andere inwoner
inwoners de zorg zal of zullen hebben van het erf van den afwesigen, indien eenige, en bekend is hij den superintendant als zoodanige toezicht hebbende: hij kan den eniggen tijd weder toelating vorderen.

4. Wanneer een inwoner de Genuadental iemand ontmoet, die niet tot dat instituut behoort, kan hij of zij toegelaten worden om daaraan te verblijven.

5. De zendingen, maar bijzonder de opziens, zullen, zooveel mogelijk, het verblijf van vreemdelingen en uitgezette inwoners op de landen van het instituut ten nadeele van de vrijtijde inwoners, beletten.

6. Een inwoner kan uitgesloten worden van kerkelijke voorrechten, zonder daarbij zijn tijdelijke rechten als een inwoner te verheffen; maar hij zal al zulke laatstgenoemde rechten verbeuren, op verzoek van eenige der zendingen of opziens, wanneer het, ten geefsen van den magistraat van dit distrikt bewezen wordt, dat hij, na redelijke waarschuwing, welhaast in het minnaar van de tijdelijke reglementen van nol insluitv., en dat zijn gedrag en voorbeeld strakken tot zielebederf der inwoners.

7. De voorgaande reglementen kunnen van tijd tot tijd door het Gouvernement verbeterd worden, op aanzoek der zendingen, benevens vier-vijfde van de inwoners gerechtigd om over tijdelijke aangelegenheden in stemming, die tegenwoordig zullen zijn in een bijeenkomst, speciaal tot dat einde belegd, na voorafgaande behoorlijke kennisgeving van het doel van zoo-danig bijeenkomst, gedurende een tijdperk van ten minste drie weenden.

8. Het recht om vee te schutten, hetwelk op de weilanden overstredende gevonden wordt, berust bij den toeszenden zendeling, of bij een of meer persenen behoorlijk door hem gemachtigd; maar elke inwoner mag vee naar de schut brengen, dat in zijn tuin of koornlanden overstreeft.

Goedgekeurd.

Op last van Zijne Excellentie den Gouverneur; Get. manifold J. Haman, Koloniale Secretaris.

**Footnote:**

1) From 1818 onwards the candidates for baptism are no longer included in the number given in the fifth column i.e. total congregation.

2) Includes unbaptized children.

3) Number in brackets (134) means candidates for baptism are included.

4) Probably includes candidates for baptism for this year.

5) Includes communicants.

6) Includes Kopjes instead for this year.

7) For the years 1795 - 1799 see Schneider, G., 1910 p. 165-7 is the main source, otherwise the numbers have been taken from the Exx. P. Acces., P. Acces., & Behr. a.d. Arg.
Bibliography

Primary Material.
