

OCCUPATION FOCUSED CONCEPTUAL FRAMEWORKS

[HOME](#) • [ADDITIONAL INFORMATION](#) • [LECTURES](#) • [CREDITS](#)

HOME

Conceptual frameworks are the core concepts of occupational therapy thinking used in practice by occupational therapy students, therapists and scientists.

This module offers a foundation of OT practice and understanding OT focused theories, in the training of 3rd year OT students. It is a continuation of what they have covered in 2nd year where they covered generic conceptual frameworks.

The OT focused conceptual frameworks focuses on human occupation and function. This module is therefore aimed at such users and occupational therapy training institutions who could make use of the information contained in this module.
